

## October 29, 2014 Community Advisory Council (CAC) Meeting

### CAC Recommended Changes to 2013 Clean Air Plan

1. Move last two paragraphs in Section 2 (Local Air Quality) to below paragraph 5. The change has been made to improve flow. Figures in Chapter 2 have been re-numbered accordingly.
2. Update all air quality statistics out to 2013. This was done for exceedance days, EPCD and designation value data. ARB was contacted to obtain population- and area-weighted exposure data for 2012 and 2013. Gayle Sweigart from ARB explained that the exposure data are updated every three years and will not be available until sometime in 2015. The exposure data, therefore, have not been updated and the latest year for these data will remain at 2011.
3. Explain the zero values in Table 3-3. A footnote has been added to explain that zero emission values mean either that sources within the category do not emit ROC and/or NO<sub>x</sub>, or the emissions are included within another ARB emission category in this table. Since the emission category line items listed in this table are prescribed by ARB, it is important to retain each line item in the table.
4. Indicate in Figure 3-5 that the projected emissions from stationary sources include ERC's by modifying the data label of the stationary source pie wedge. Change to pie chart made.
5. Change the heading on Figure 5-2 to indicate that the source of the data is from SBCAG's August 2013 Regional Transportation Plan and Sustainable Communities Strategy. Source of data added.
6. Clarify Table 3-1 is a summary of Table 3-3. Clarification made in footnote to Table 3-1.
7. Revise Table 5-3 to correct the public transportation project sponsors for TCM T-5. Correction made.
8. Revise Figure 2-7 to include later data. Note that 2013 VMT data are currently not available; therefore, the end-year in this figure has been updated to 2012.
