Hi Richard,

Just wanted to share with you a conversation I had with EPA recently regarding winery emission control source testing. In particular, we discussed the CCWS question and options, including a potential EPA study to evaluate source testing methodologies (a longer term project). In the meantime, EPA provided us guidance that source testing using the mass balance calculations currently in place would be an acceptable compliance tool in lieu of traditional inlet/outlet source testing. Once complete, we would utilize EPA's test method for new projects. I'll also be sharing this information with Patrick Thompson.

Sincerely,

Mike
