## Santa Barbara County Air Pollution Control District BACKGROUND PAPER – March 27, 2012

## **REVISIONS TO**

RULE 330. SURFACE COATING OF METAL PARTS AND PRODUCTS
RULE 337. SURFACE COATING OF AEROSPACE VEHICLES AND COMPONENTS
RULE 349. POLYESTER RESIN OPERATIONS
RULE 353. ADHESIVES AND SEALANTS
RULE 321. SOLVENT CLEANING MACHINES AND SOLVENT CLEANING

#### **BACKGROUND**

The Santa Barbara County Air Pollution Control District (District) proposes amendments to Rules 330, 337, 349, and 353 to implement new solvent cleaning requirements. The adoption of the new provisions will reduce reactive organic compound emissions and fulfill clean air plan commitments. Slight changes to Rule 321 are also proposed for rule consistency.

The District first adopted Rule 330 in 1979 as, "Surface Coating of Manufactured Metal Parts." In 2000, we amended Rule 330 in response to USEPA-identified deficiency items.

Rule 337 (adopted 1990) fulfilled a 1989 mandate that aircraft and aerospace coatings be controlled at the limitations outlined in the USEPA Control Techniques Guidelines for **Surface Coating of Miscellaneous Metal Parts and Products**. The last significant amendments made to Rule 337 occurred in 1994.

Rule 349 (fiberglassing operations, adopted 1993) and Rule 353 (adhesives and sealants, adopted 1999) largely follow guidelines from the California Air Resources Board (ARB).<sup>a</sup> The current rulemaking action creates the first amendments to Rule 349 and 353.

The U.S.EPA approved Rules 321, 330, 337, 349, and 353 for inclusion into the State Implementation Plan on May 20, 2011; June 8, 2000; February 12, 1996; January 6, 1995; and April 5, 2000; respectively.

## PROPOSED REVISIONS

Appendices A through G contain annotated proposed amended rules (PARs). Four operation-specific rules are being amended to include similar **general solvent cleaning** provisions found in Rule 321, Solvent Cleaning Machines and Solvent Cleaning (adopted September 20, 2010). This approach provides owners and operators with **general solvent cleaning** provisions within the rule specific to their operations.

The **general solvent cleaning** provisions are in three categories: 1) work practices, 2) reactive organic compound (ROC) content limits, and 3) solvent cleaning devices/methods. We are also adding rule exemptions and other provisions that parallel Rule 321 (e.g., recordkeeping, source testing, and compliance schedule).

These PARS are anticipated to prompt operators to

switch to lower ROC solvents to meet lower ROC solvent content limits specified in the rules. As in Rule 321, to preclude an unintended consequence of switching over from non-toxic to toxic solvents these PARs define **solvent** to include any liquid containing any ROC or toxic air contaminant.

Staff considered provisions in other air districts rules when drafting the PARs. These included the South Coast Air Quality Management District (SC), the San Joaquin Unified Valley Air Pollution Control District (SJV), and the Ventura County APCD (VC) rules.

We also considered:

 comments from the USEPA and ARB on prior rules; and

<sup>&</sup>lt;sup>a</sup> Determination of Reasonably Available Control Technology and Best Available Retrofit Control Technology for Polyester Resin Operations (1991) and Adhesives and Sealants (1998).

- input from the regulated community; and
- federal policies, guidance documents, and regulations.

This rulemaking project also includes modifications to Rule 102 (Definitions) and Rule 202 (Exemptions to Rule 201). Amendments to these rules are needed for uniformity, updating, and improved rule clarity.

The District expects the proposed revisions will result in about 8 tons per year of ROC emission reduction in Santa Barbara County (on top of the 192 tons per year to be realized from Rule 321 adopted September 20, 2010). The cost-effectiveness of the amended rules range between about -\$5,000 (cost saving) to \$4,700 per ton of ROC reduced.

The proposed amended rules incorporate the District's Clean Air Plan's proposed control measures to attain the California ozone ambient air quality standard. These PARs provide for expeditious implementation of **every feasible measure** to reduce ozone precursor emissions.

#### **Summarized Amendments**

## **RULE 102, DEFINITIONS**

#### Add:

- an enclosed cleaning system definition,
- an exempt compound definition,
- chemical names to the **fluorinated gases** definition,
- four USEPA-identified **exempt compounds** to the **reactive organic compound** definition, and
- terms common to the proposed amended rules.

## RULE 202, EXEMPTIONS TO RULE 201

Replace EPA Method 24 with South Coast AQMD Method 313-91. Also make minor revisions (e.g., add rule and test method titles).

## RULE 321, SOLVENT CLEANING MACHINES AND SOLVENT CLEANING

Revise the Section B.6 exemption to clarify that the exemption does not apply to solvent cleaning machines when an operation-specific rule indicates such equipment is subject to Rule 321.

# RULE 330, SURFACE COATING OF METAL PARTS AND PRODUCTS

Add **Rule 321-type** exemptions, definitions, and general solvent cleaning, recordkeeping, reporting,

Santa Barbara County APCD

source testing, and compliance provisions.

## RULE 337, SURFACE COATING OF AEROSPACE VEHICLES AND COMPONENTS

In addition to the changes outlined for Rule 330, add:

- 1. Adhesive and sealant provisions; and
- 2. Coating categories and limits from a USEPA Control Techniques Guideline (CTG) document and a federal regulation for the source category. The District is also lowering the stripper ROC limit from 400 to 300 grams per liter in response to suggestions by the ARB and the USEPA.

## **RULE 349, POLYESTER RESIN OPERATIONS**

The changes outlined for Rule 330 were included in PAR 349. Lower polyester resin material monomer contents limits and a higher add-on control equipment overall efficiency limit were also added. These new provisions have a 24-month phase-in period to allow for product sale-through and available stock depletion. Lastly, staff made minor changes to the rule's Attachment A, "Static Method for Determination of Volatile Emissions from Polyester and Vinyl Ester Resins."

## **RULE 353, ADHESIVES AND SEALANTS**

Amend to include **Rule 321-type** provisions like in the other rules. Add application equipment requirements and stripper use provisions. Reduce the ROC-content limit on several products.

# Sources that May be Affected by the Amended Rules

These are in four general categories:

- Sources subject to Rule 330 that surface coat (paint) metal parts and products (excludes architectural coating operations subject to Rule 323 and motor vehicle coating operations subject to Rule 339).
- II. Sources subject to Rule 337 that surface coat aerospace vehicles and components (excludes electronic components, but includes aircraft adhesive and sealant surface coating).

<sup>&</sup>lt;sup>1</sup> The June 2009 USEPA Technical Support Document for the San Joaquin Valley APCD, Rule 4604, Aerospace Assembly and Component Coating Operations, found the rule deficient for failing to include all of the coating categories in the CTG. Hence, to avoid a similar deficiency finding, PAR 337 includes additional categories from the CTG.

- III. Any person subject to Rule 349 that owns or operates a commercial or industrial polyester resin operation.
- IV. Sources subject to Rule 353 that use adhesives and sealants (includes construction contractors but not adhesives and sealants subject to the consumer product regulations).

Table 1 lists the sources that may be impacted by the amended rules.

There are likely additional permit-exempt sources not listed in Table 1, which will also be affected by the PARs. It should be noted that although oil and gas production and process facilities appear in Table 1, industry representatives indicate the amended rules will have limited applicability and impacts to them.

## **EMISSION REDUCTION / COST-EFFECTIVENESS**

#### **ROC Emission Reductions**

The District anticipates the ROC emission reductions from adding solvent cleaning provisions to the rules will be about 8 tons per year. Table 2 breaks down the ROC emission reductions for each of the control measures.

Table 2. ITEMIZED EMISSIONS REDUCTIONS

Rule (Control Measure)	ROC Emission Reductions (TPY)
Rule 330/337 (R-SC-2)	5.7931
Rule 349 (R-SL-5)	0.9526
Rule 353 (R-SL-9)	1.5759
Total	8.3216

Due to changes in the project, activity factors, and the inventory, the currently projected emission reductions for calendar year 2020 are about 7 percent less than those indicated in the 2010 Clean Air Plan. This difference equates to about 5 pounds per day. Irrespective of the change in the ROC emission reductions, the amended rules need to be adopted to fulfill the CAP commitment and to adopt every feasible measure.

#### **Cost-Effectiveness**

The cost-effectiveness of switching from a high-ROC solvent to a low-ROC solvent ranges

Santa Barbara County APCD

between -\$5,308 (savings) and \$4,744 per ton of ROC reduced. And the cost-effectiveness of using an enclosed solvent cleaning system or acetone when cleaning application equipment ranges from \$776 to \$1,888 tons of ROC reduced.

Table 3 shows the summarized costeffectiveness data for four scenarios.

Table 3. COST-EFFECTIVENESS DATA

	Cost Effectiveness
Scenario	Range (Dollars per
Scenario	Ton of ROC
	Reduced)
1. 100% replacement with	-5,308 to -146 (cost
aqueous solvents	savings)
2. 20% replacement with	418 to 699
acetone, 80% replacement	
with aqueous solvents	
3. 100% replacement with	-3,548 to 4,744
acetone.	
4. Cleaning application	\$776 to \$1,888
equipment with an	
enclosed gun washer or	
replacing an ROC solvent	
with acetone.	

## **Incremental Cost-Effectiveness**

Health and Safety Code Section 40920.6 requires an incremental cost-effectiveness analysis for a regulation that identifies more than one control option to meet the same emission reduction objectives. Incremental cost-effectiveness is defined as the difference in costs divided by the difference in emission reductions between one level of control and the next more stringent level of control.

The amended rules regulate solvent cleaning. Compliance by operation modifications and the substitution of materials is expected. No alternative emission control scenario is available.

#### ANALYSIS OF EXISTING FEDERAL AND DISTRICT REGULATIONS

Appendix H contains the written analysis required by the California Health & Safety Code Section 40727.2 requirements.

#### COMMENTS AND PUBLIC MEETINGS

#### **Comments**

The District received and responded to an extensive volume of comments on the proposed amended rules during the development stages. Staff consolidated these comments and responses into Appendix I, Clarification of Rule Issues. Comments received during the formal public comment period preceding the Board adoption hearing on the proposed rule changes and staff's response to these comments will be presented to the District Board of Directors as part of the rule adoption process.

## **Public Meetings**

## SCOPING WORKSHOPS, FEBRUARY 10, 2011

Staff explained that solvent cleaning provisions, similar to those in Rule 321, were being added to each of the rules. Attendees asked if we were changing the requirements on solvents used for stripping, thinning, and solvent welding. Staff responded during the meeting that the current **as applied** limits for those operations were not being changed, only the solvent cleaning provision were being added or modified.

Industry spokespersons asked that the rule modifications:

1. Add aerospace adhesives to Rule 337 and make the Rule 353 aerospace adhesive exemption less ambiguous,

- 2. Include uniform definitions between the rules,
- 3. Provide provisions for reworking and unglueing parts, and
- 4. Allow isopropyl alcohol to be used as a solvent on aerospace ground support equipment.

Rulemakers considered and addressed these requests in the proposed amended rules. However, it should be noted that ARB and USEPA comments received after the Scoping Workshop recommended reducing the stripper ROC content limit from 400 to 300 grams per liter. The District has revised the project to include this change.

## WORKSHOP AND COMMUNITY ADVISORY COUNCIL MEETING, AUGUST 10, 2011

The District conducted a public workshop on August 10, 2011. A number of concerns were raised at the workshop (e.g., rule clarity, scope of applicability, and need for certain rule revisions). During the subsequent Community Advisory Council (CAC) meeting, additional concerns were raised. Hence, the CAC continued the item to allow staff to develop revised rules and to provide documentation in support of the proposed rule amendments.

STAKEHOLDERS MEETINGS: DECEMBER 12, 2011, JANUARY 10, 2012, MARCH 1, 2012, AND MARCH 19, 2012

Various stakeholder meetings were conducted on these dates to convey information on the proposed rule changes and work out possible alternatives. COMMUNITY ADVISORY COUNCIL MEETING SCHEDULED FOR APRIL 11, 2012

PUBLIC HEARING ON THE ADOPTION OF THE PROPOSED AMENDED RULES, TENTATIVELY SCHEDULED FOR JUNE 21, 2012

## COMPARISON OF ADJOINING AIR POLLUTION CONTROL DISTRICT RULES

Appendix J provides a comparison of the San Joaquin Valley Air Pollution Control District (APCD), Ventura County APCD, and the San Luis Obispo County APCD rules on permit exemptions and requirements for solvent cleaning machines and solvent cleaning. Basically, there are general similarities with some minor differences between the adjoining air district rules and the proposed amended rules.

#### IMPACTS OF THE REVISED RULES TO INDUSTRY AND THE DISTRICT

Details of the impacts from the rule revisions are summarized in Appendix K. The rule revisions will cause impacts to the regulated community and District staff by:

- 1. Expanding the scope of applicability of the rules to include 1) solvent cleaning that is associated with the operation-specific rules, and 2) solvents that contain toxic air contaminants.
- 2. Requiring changes to the methods of operation to comply with the new solvent cleaning requirements (e.g., use of enclosed cleaning systems when performing solvent cleaning of application equipment).
- 3. Lowering the ROC-content limits on Rule 349 polyester resin materials and three Rule 337 coatings.
- 4. Increasing recordkeeping provisions.
- 5. Reducing solvent costs for some sources due to the use of lower-ROC content solvents.

#### Appendix A Santa Barbara County Annotated Proposed Amended Rule 102, Definitions

RULE 102. DEFINITIONS. (Adopted 10/18/1971, revised 1/12/1976, readopted 10/23/1978, revised 7/11/1989, 7/10/1990, 7/30/1991, 7/18/1996, 4/17/1997, 1/21/1999, 5/20/1999, 6/19/2003, 1/20/2005, 6/19/2008, 1/15/2009, 9/20/2010, and 3/17/2011, and [date of amended rule adoption])

These definitions apply to the entire rulebook. Definitions specific to a given rule are defined in that rule or in the first rule of the relevant regulation. Except as otherwise specifically provided in these Rules where the context otherwise indicates, words used in these Rules are used in exactly the same sense as the same words are used in Division 26 of the Health and Safety Code.

[...]

"Aerosol Product" means a hand-held, non-refillable container that expels pressurized product by means of a propellant-induced force.

[...]

"Avionic Equipment" means any electronic system used on any aircraft, aerospace vehicle, satellite, or space vehicle.

[...]

"Capture Efficiency" means the percentage by weight of affected pollutants delivered to a control device divided by the weight of total affected pollutants generated by the source.

[...]

"Carbon Adsorber" means a bed of activated carbon into which an air-solvent gas-vapor stream is routed and which adsorbs the solvent on the carbon.

[…]

"Catalytic Incinerator" means any device that burns reactive organic compounds or toxic air contaminants in air using a material that increases the rate of combustion without itself undergoing a net chemical change in the process. Common catalyst materials include but are not limited to, platinum alloys, chromium, copper oxide, and cobalt.

[...]

"Control Device" means any destruction and/or recovery equipment used to destroy or recover affected pollutant emissions generated by a regulated operation.

"Control Device Efficiency" means the percentage of affected pollutants entering a control device that is not present in the exhaust to the atmosphere of that control device.

[...]

"Electronic Components" means the portions of an assembly, including, but not limited to: circuit card assemblies, printed wire assemblies, printed circuit boards, soldered joints, ground wires, bus bars, magnetic tapes and tape drive mechanisms, discs and disc drive mechanisms, electro-optical devices (e.g., optical filters, sensor assemblies, infrared sensors, charged coupled devices, thermal electric coolers, and vacuum assemblies), solid state components, semiconductors (e.g., diodes, zeners, stacks, rectifiers, integrated

Comment [A1]: The term is found in proposed amended Rules 330, 337, 349, and 353. To avoid ambiguity, this definition, and other add-on control equipment definitions (e.g., control device and control device efficiency), are being added. To avoid redundancy in Rules 330, 337, 349, and 353, the District is adding the definitions to Rule 102.

microcircuits, transistors, solar cells, light sensing devices, and light-emitting devices), and other electrical fixtures, except for the actual cabinet in which the components are housed.

"Electrostatic Spray" means any method of applying a spray coating in which an electrical charge is applied to the coating and the substrate is grounded. The coating is attracted to the substrate by the electrostatic potential between them.

[...]

"Enclosed Cleaning System" means any application equipment cleaner (e.g., an enclosed gun washer) that totally encloses spray guns, cups, nozzles, bowls, and other parts during solvent washing, rinsing, and draining procedures. An enclosed cleaning system for cleaning application equipment is not a solvent cleaning machine.

[...]

"Exempt Compound" means any compound listed as an exempt compound in the definition of "Reactive Organic Compound." Tertiary-butyl acetate (also known as t-butyl acetate or tBAc) shall be considered exempt as a reactive organic compound only for purposes of reactive organic compound emissions limitations or reactive organic compound content requirements and shall be considered a reactive organic compound for purposes of all recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements which apply to reactive organic compounds.

[...]

"Fluid System" means a power transmission system that uses the force of flowing liquids and gases to transmit power. Fluid systems include hydraulic systems and pneumatic systems.

**"Fluorinated Gases"** means a compound that contains fluorine and exists in a gaseous state at 25 degrees Celsius and 1 atmosphere of pressure. Fluorinated gases include, but are not limited to:

- 1. hexafluoroethane  $(C_2F_6)$ , (CFC-116),
- 2. octafluoropropane (C<sub>3</sub>F<sub>8</sub>), (PFC 218),
- 3. octafluorocyclopentene (C<sub>5</sub>F<sub>8</sub>), (PFC C-1418),
- 4. tetrafluoromethane (CF<sub>4</sub>), (CFC-14),
- 5. trifluoromethane (CHF<sub>3</sub>), (HFC-23),
- 6. difluoromethane  $(CH_2F_2)$ , (HFC-32),
- 7. octafluorocyclobutane\_(c-C<sub>4</sub>F<sub>8</sub>), (RC 318),
- 8. octafuorotetrahydrofuran - $(C_4F_8O)$ ,
- 9. hexafluoro-1,3-butadiene (C<sub>4</sub>F<sub>6</sub>),
- 10. carbon fluoride oxide ( $COF_2$ ),
- 11. nitrogen trifluoride (NF<sub>3</sub>), and
- 12. sulfur hexafluoride (SF<sub>6</sub>).

[...]

"Grams of Reactive Organic Compound Per Liter of Material" means the weight of reactive organic compound per volume of material and can be calculated by the following equation:

Grams of reactive organic compounds per liter of material 
$$\equiv \frac{\underline{W_s - W_w - W_e}}{\underline{V_m}}$$

Where:

 $W_s =$  Weight of volatile compounds in grams

 $\overline{W_w}$  = Weight of water in grams

 $\overline{W_e}$  = Weight of exempt compounds in grams

**Comment [A2]:** This definition is being added per requests from industry. The term appears in current Rule 321 and PARs 337 and 353. Hence, we are placing the definition in Rule 102.

Comment [A3]: Adding the exempt compound definition here eliminates the need to insert the same definition into other rules. The tBAc qualifier addresses EPA concerns.

Comment [A4]: Adding chemical names here follows the protocol used in the exempt compound list within the reactive organic compound definition.

#### $V_m$ = Volume of material in liters

[...]

"High-Precision Optics" means any optical element used in an electro-optical device that is designed to sense, detect, or transmit light energy, including specific wavelengths of light energy and changes in light energy levels.

[...]

"Natural Draft Opening" means any opening in a room, building, or total enclosure that remains open during operation of the facility and that is not connected to a duct in which a fan is installed. The rate and direction of the natural draft through such an opening is a consequence of the difference in pressures on either side of the wall containing the opening.

[...]

"Operating Parameter Value" means any minimum or maximum value established for a control equipment or process parameter which, if achieved by itself or in combination with one or more other operating parameter values, determines that an owner or operator has continued to comply with an applicable emission limitation.

[...]

"Overall Efficiency" means the emission reduction, expressed as a percentage that results from the combined effect of capture and control of affected pollutants (capture efficiency multiplied by control efficiency).

[...]

"Photoresist Coating" means any coating applied directly to a substrate to protect surface areas when chemical milling, etching, or other chemical surface operations are performed on the substrate.

 $[\ldots]$ 

"Reactive Organic Compound" means any compound containing at least one (1) atom of carbon, except for the following exempt compounds:

- 1. acetone
- 2. ammonium carbonate
- 3. carbon dioxide
- 4. carbon monoxide
- 5. carbonic acid
- 6. dimethyl carbonate
- 7. ethane
- 8. metallic carbides or carbonates
- 9. methane
- 10. methyl acetate
- 11. methyl chloroform (1,1,1-trichloroethane)
- 12. methyl formate; HCOOCH<sub>3</sub>
- 13. cyclic, branched, or linear completely methylated siloxane compounds
- 14. methylene chloride
- 15. parachlorobenzotrifluoride
- 16. perchloroethylene (tetrachloroethylene)
- 17. the following four classes of perfluorocarbon (PFC) compounds:

- a. cyclic, branched, or linear, completely fluorinated alkanes,
- b. cyclic, branched, or linear, completely fluorinated ethers with no unsaturations,
- c. cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations,
   and
- sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.
- 18. propylene carbonate
- 19. tertiary-butyl acetate; C<sub>6</sub>H<sub>12</sub>O<sub>2</sub> ("acetic acid, 1,1-dimethylethyl ester")

Tertiary-butyl acetate (also known as t-butyl acetate or tBAc) shall be considered exempt as a reactive organic compound only for purposes of reactive organic compound emissions limitations or reactive organic compound content requirements and <a href="will-continue-to-shall">will-continue-to-shall</a> be <a href="considered">considered</a> a reactive organic compound for purposes of all recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements which apply to reactive organic compounds.

- 20. CFC-11 (trichlorofluoromethane)
- 21. CFC-12 (dichlorodifluoromethane)
- 22. CFC-113 (1,1,2-trichloro-1,2,2-trifluoroethane)
- 23. CFC-114 (1,2-dichloro 1,1,2,2-tetrafluoroethane)
- 24. CFC-115 (chloropentafluoroethane)
- 25. HCFC-22 (chlorodifluoromethane)
- 26. HCFC-31 (chlorofluoromethane)
- 27. HCFC-123 (1,1,1-trifluoro 2,2-dichloroethane)
- 28. HCFC-123a (1,2-dichloro-1,1,2-trifluoroethane)
- 29. HCFC-124 (2-chloro-1,1,1,2-tetrafluoroethane)
- 30. HCFC-141b (1,1-dichloro 1-fluoroethane)
- 31. HCFC-142b (1-chloro-1,1 difluoroethane)
- 32. HCFC-151a (1-chloro-1-fluoroethane)
- 33. HCFC-225ca (3,3-dichloro-1,1,1,2,2-pentafluoropropane)
- 34. HCFC-225cb (1,3-dichloro-1,1,2,2,3-pentafluoropropane)
- 35. HFC-23 (trifluoromethane)
- 36. HFC-32 (difluoromethane)
- 37. HFC-43-10mee (1,1,1,2,3,4,4,5,5,5-decafluoropentane)
- 38. HFC-125 (pentafluoroethane)
- 39. HFC-134 (1,1,2,2-tetrafluoroethane)
- 40. HFC-134a (1,1,1,2-tetrafluoroethane)
- 41. HFC-143a (1,1,1-trifluoroethane)
- 42. HFC-152a (1,1-difluoroethane)
- 43. HFC-161 (ethylfluoride)
- 44. HFC-227ea (1,1,1,2,3,3,3-heptafluoropropane)
- 44<u>5</u>. HFC-236ea (1,1,1,2,3,3-hexafluoropropane)
- 4<u>56</u>. HFC-236fa (1,1,1,3,3,3-hexafluoropropane)
- 46<u>7</u>. HFC-245ca (1,1,2,2,3-pentafluoropropane)
- 478. HFC-245ea (1,1,2,3,3-pentafluoropropane)
- 489. HFC-245eb (1,1,1,2,3-pentafluoropropane) 4950. HFC-245fa (1,1,1,3,3-pentafluoropropane)
- 501. HFC-365mfc (1,1,1,3,3-pentafluorobutane)
- 52. HFE-7000; n-C<sub>3</sub>F<sub>7</sub>OCH<sub>3</sub>; (1,1,1,2,2,3,3-heptafluoro-3-methoxy-propane)
- 543. HFE-7100; (CF<sub>3</sub>)<sub>2</sub>CFCF<sub>2</sub>OCH<sub>3</sub>; (2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane) or  $C_4F_9OCH_3$ ; (1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane)

**Comment [A5]:** EPA's definition of **volatile organic compounds** in 40 CFR, Part 51.100(s) includes HFC-227ea. The same is true for the other compounds we are adding (52, 55, and 56).

**Comment [A6]:** The data is reformatted into two columns with the compound's item number added

for ease of reference.

524. HFE-7200; (CF<sub>3</sub>)<sub>2</sub>CFCF<sub>2</sub>OC<sub>2</sub>H<sub>5</sub>; (2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane) or  $C_4F_9OC_2H_5$ ; (1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane)

- 55. HFE-7300; (41)-1,1,1,2,2,3,4,5,5,5-decafluoro-3-methoxy-4-trifluoromethyl-pentane)
- 56. HFE-7500; (3-ethoxy-1,1,1,2,3,4,4,5,5,6,6-dodecafluoro-2- (trifluoromethyl) hexane)

Rule 202.D.10.1.1 requires an Authority to Construct and Permit to Operate when using more than one gallon per year per stationary source of any one of the following exempt compounds:

(6) dimethyl carbonate, (37) HFC-43-10mee, (12) methyl formate, (50) HFC-245fa, (33) HCFC-225ca, (51) HFC-365mfc, or

(34) HCFC-225cb, (53) HFE-7100 [(CF<sub>3</sub>)<sub>2</sub>CFCF<sub>2</sub>OCH<sub>3</sub> or C<sub>4</sub>F<sub>9</sub>OC<sub>2</sub>H<sub>5</sub>]

Rule 202.D.10.1.2 requires an Authority to Construct and Permit to Operate when using more than one gallon per year per stationary source of: (19) tertiary-butyl acetate.

The one gallon per year per stationary source limit is a per compound limit for each compound in aggregate for the entire stationary source and includes any amounts of the compound used in mixed or diluted product.

"Reactive Organic Compound Composite Partial Pressure" means the sum of the partial pressures of compounds defined as reactive organic compounds. Reactive organic compound composite pressure shall be calculated as follows:

$$PP_{c} = \frac{\sum_{i=1}^{n} (W_{i})(VP_{i}) / MW_{i}}{W_{w} / MW_{w} + \sum_{e=1}^{n} W_{e} / MW_{e} + \sum_{i=1}^{n} W_{i} / MW_{i}}$$

Where:  $W_i$  = Weight of the "i"th reactive organic compound, in grams

 $W_w$  = Weight of water, in grams

 $W_e^{-}$  = Weight of the "e"th exempt compound, in grams

 $MW_i$  = Molecular weight of the "i"th reactive organic compound, in grams per grams-mole

 $MW_w$  = Molecular weight of water, in grams per grams-mole

 $MW_e$  = Molecular weight of the "e"th exempt compound, in grams per grams-mole

PP<sub>c</sub> = Reactive organic compound composite partial pressure at 20 degrees Celsius, in

millimeters of mercury

 $VP_i$  = Vapor pressure of the "i"th reactive organic compound at 20 degrees Celsius, in

millimeters of mercury

[...]

"Scientific Instrument" means an instrument, including the components, assemblies, and subassemblies used in their manufacture, and associated accessories and reagents, that is used for the detection, measurement, analysis, separation, synthesis, or sequencing of various compounds.

[...]

"South Coast Air Quality Management District Method 303-91, "Determination of Exempt Compounds," August 1996," means the test method adopted by and in effect by the South Coast Air Quality Management District on [date of amended rule adoption].

"South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry, "June 1993," means the test method adopted by and in effect by the South Coast Air Quality Management District on [date of amended rule adoption].

[...]

"Temporary Total Enclosure" means any total enclosure that is constructed for the sole purpose of measuring the emissions from an affected source that are not delivered to an emission control device. A temporary total enclosure must be constructed and ventilated (through stacks suitable for testing) so that it has minimal impact on the performance of the permanent emission capture system. A temporary total enclosure will be assumed to achieve total capture of fugitive emissions if it meets the requirements found in 40 CFR Section 63.750(g)(4) and if all natural draft openings are at least four duct or hood equivalent diameters away from each exhaust duct or hood. Alternatively, the owner or operator may apply to the Administrator Control Officer for approval of a temporary enclosure on a case-by-case basis.

"Thermal Incinerator" means any device that burns reactive organic compounds or toxic air contaminants in air by direct application of heat. Thermal incinerators are usually equipped with burners, refractory lined chambers, heat recovery equipment, and process controllers.

"Total Enclosure" means any permanent structure that is constructed around a gaseous emission source so that all gaseous pollutants emitted from the source are collected and ducted through a control device, such that 100 percent capture efficiency is achieved. There are no fugitive emissions from a total enclosure. The only openings in a total enclosure are forced makeup air and exhaust ducts and any natural draft openings such as those that allow raw materials to enter and exit the enclosure for processing. All access doors or windows are closed during routine operation of the enclosed source. Brief, occasional openings of such doors or windows to accommodate process equipment adjustments are acceptable, but if such openings are routine or if an access door remains open during the entire operation, the access door must be considered a natural draft opening. The average inward face velocity across the natural draft openings of the enclosure shall be calculated including the area of such access doors. The drying oven itself may be part of the total enclosure. An enclosure that meets the requirements found in 40 CFR Section 63.750(g)(4) is a permanent total enclosure.

[...]

"Transfer Efficiency" means the ratio of the weight of coating solids adhering to the object being coated to the weight of coating solids used in the application process, expressed as a percentage.

"Waste Solvent Residue" means sludge that may contain dirt, oil, metal particles, and/or other undesirable waste products concentrated after heat distillation of solvent either in a solvent cleaning machine itself or after distillation in a separate still.

# Appendix B Santa Barbara County Annotated Proposed Amended Rule 202, Exemptions to Rule 201

RULE 202. EXEMPTIONS TO RULE 201. (Adopted 10/18/1971, revised 5/1/1972 and 6/27/1977, readopted 10/23/1978, revised 12/7/1987, 1/11/1988, 1/17/1989, 7/10/1990, 7/30/1991, 11/05/1991, 3/10/1992, 5/10/1994, 6/28/1994, 4/17/1997, 3/17/2005, 1/17/2008, 6/19/2008, 9/20/2010, 1/20/2011, and 3/17/2011, and [date of amended rule adoption])

[...]

#### C. Definitions

See Rule 102, <u>Definitions</u>, for definitions.

**Comment [A7]:** Including rule titles for referenced rules follows an EPA recommendation

#### D. General Provisions

[...]

5. Temporary Equipment

[...]

 the temporary equipment replaces equipment that has qualified for a breakdown pursuant to Rule 505, Breakdown Conditions.

[...]

6. De minimis Exemption

Any physical change in an existing stationary source that meets each of the requirements below is exempt. Emission increases shall be based on the uncontrolled potential to emit, less emission reductions achieved through Rule 331, <a href="Fugitive Emissions Inspection and Maintenance">Fugitive Emissions Inspection and Maintenance</a>, and shall not be reduced (netted out) by emission reductions achieved through the removal or control of any component.

[...]

- 9. A permit shall not be required for equivalent routine replacement in whole or in part of any article, machine, equipment or other contrivance where a Permit to Operate had previously been granted under Rule 201, Permits Required, providing emissions are not increased and there is no potential for violating any ambient air quality standard. An equivalent piece of equipment has a Potential to Emit, operating design capacity or actual demonstrated capacity less than or equal to that of the original piece of equipment, and is subject to the same limitations and permit conditions as the equipment being replaced. [...]
- Notwithstanding any exemption defined in this rule, no new or modified stationary source that has
  the potential to emit air contaminants in excess of the amounts specified shall be exempt from
  permit requirements: [...]
  - In addition, notwithstanding any exemption defined in this rule, no stationary source that has the potential to emit any air contaminants in excess of the amounts specified shall be exempt from permit requirements: [...]
    - 2. more than one gallon per year of tertiary-butyl acetate;  $C_6H_{12}O_2$  ("acetic acid, 1,1-dimethylethyl ester"). Tertiary-butyl acetate (also known as t-butyl acetate

or tBAc) shall be considered exempt as a reactive organic compound only for purposes of reactive organic compound emissions limitations or reactive organic compound content requirements and <a href="will-centinue-to-shall">will-centinue-to-shall</a> be <a href="considered">considered</a> a reactive organic compound for purposes of all recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements which apply to reactive organic compounds. The one gallon per year per stationary source limit for tertiary-butyl acetate is an aggregate limit for the entire stationary source and includes any amounts of the compound used in mixed or diluted product.

[...]

- 16. Notwithstanding any exemption in these rules and regulations, if the combined emissions from all construction equipment used to construct a stationary source which requires an Authority to Construct have a projected actual in excess of 25 tons of any pollutant, except carbon monoxide, in a 12 month period, the owner of the stationary source shall provide offsets as required under the provisions of Rule 804, Emission Offsets, and shall demonstrate that no ambient air quality standard would be violated.
- 17. No additional permit shall be required at a stationary source in the District for equipment permitted by the District for various location uses provided the following conditions are met:

[...]

d. The stationary source reports all uses (including the start and end dates) and associated emissions for each use under this exemption to the <u>APCD-District</u> in their next annual report (or semi-annual report for Part 70 sources).

**Comment [A8]:** Our practice to eliminate acronyms.

[...]

## I. Coatings Applications Equipment and Operations

[...]

3. Equipment used in surface coating operations provided that the total amount of coatings and solvents used does not exceed 55 gallons per year. Solvents meeting the criteria of Section U.2.b or Section U.2.c or that have a reactive organic compound content of 50 grams per liter or less, as determined by the Environmental Protection Agency Reference Method 24South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer, do not contribute to the 55 gallons per year per stationary source limitation. However, such sources need not obtain permits for air pollution control equipment (i.e., spray booths, carbon adsorbers, incinerators, thermal oxidizers, dust collectors, etc.) unless control equipment is required by District prohibitory rules. For equipment owned or operated by a stationary source owner or operator and used as part of the stationary source operations, the 55 gallon per year exemption shall be based on the total coatings and solvents usage of all such equipment at the stationary source

**Comment [A9]:** EPA recommended referring to SC Method 313 for determining ROC content of materials containing < 50 g/l.

[...]

#### U. Solvent Application Equipment and Operations

[...]

2. Single solvent cleaning machines, which use unheated solvent, and which:

[...]

- c. use solvents with a reactive organic compound content of two percent or less by weight as determined by Environmental Protection Agency Method 24 the South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
- d. The liquid surface area of any solvent cleaning machine using the following solvent shall not be counted towards the 0.929 square meter (10 square feet) aggregate limit in subsection a. above:
  - i. any solvent that has a reactive organic compound content of 50 grams per liter or less, as determined by the <u>Environmental Protection Agency Method 24</u> South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer; or

[...]

 Wipe cleaning operations, provided that the solvents used do not exceed 55 gallons per year per stationary source and that the solvent cleaning complies with the requirements in Rule 321, Solvent Cleaning Machines and Solvent Cleaning.

To qualify for this exemption, the owner or operator shall maintain records of the amount (gallons per year) of solvents used for wipe cleaning at the stationary source for each calendar year.

These records shall be maintained on site for at least 3 years and be made available to the District on request. Thereafter, the records shall be maintained either on site or readily available for expeditious inspection and review for an additional 2 years. Solvents meeting the criteria of 2.b. or c. above or that have a reactive organic compound content of 50 grams per liter or less, as determined by the Environmental Protection Agency Reference Method 24South Coast Air Quality Management District Method 313-91. "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry." June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer, do not contribute to the 55 gallons per year per stationary source limitation.

**Comment [A10]:** It is our protocol to update ASTM method numbers, add titles, and reformat the references in this manner.

#### Appendix C Santa Barbara County

Annotated Proposed Amended Rule 321, Solvent Cleaning Machines and Solvent Cleaning

RULE 321. SOLVENT CLEANING MACHINES AND SOLVENT CLEANING. (Adopted 2/24/1975, readopted 10/23/1978, revised 6/11/1979, 7/10/1990, 4/17/1997, 7/17/1997, 9/18/1997, and 9/20/2010, and [date of amended rule adoption])

#### A. Applicability

This rule shall apply to any person who owns, operates, or uses any solvent cleaning machine or performs any solvent cleaning operation outside of a solvent cleaning machine during the production, repair, maintenance, or servicing of parts, products, tools, machinery, equipment, or in general work areas at any stationary source.

#### B. Exemptions

Except as otherwise specifically provided herein, the provisions of this rule shall not apply to the following:

[...]

- Any equipment or operation that is subject to or specifically exempted by any of the following District rules.
  - a. Rule 325, Crude Oil Production and Separation.
  - b. Rule 326, Storage of Reactive Organic Compound Liquids.
  - c. Rule 330, Surface Coating of Metal Parts and Products.
  - Rule 337, Surface Coating of Aircraft of Aerospace Vehicles Parts and Products Components.
  - e. Rule 339, Motor Vehicle and Mobile Equipment Coating Operations.
  - f. Rule 343, Petroleum Storage Tank Degassing.
  - g. Rule 344, Petroleum Sumps, Pits and Well Cellars.
  - Rule 349, Polyester Resin Operations.
  - i. Rule 351, Surface Coating of Wood Products.
  - j. Rule 353, Adhesives and Sealants.
  - Rule 354, Graphic Arts.

Notwithstanding this exemption, the applicable Rule 321 requirements apply if a rule for any above process specifies a solvent cleaning machine shall comply with the applicable provisions of Rule 321.

[...]

Click <u>here</u> to return to the list of Appendices in the Background Paper.

Comment [A12]: PARs 330, 337, 349, and 353 include a section indicating Rule 321 provisions

apply when using a solvent cleaning machine.

Comment [A11]: Updated title.

[draft of March 27, 2012]

THIS PAGE INTENTIONALLY LEFT BLANK

# Appendix D Santa Barbara County Annotated Proposed Amended Rule 330, Surface Coating of Metal Parts and Products

RULE 330. SURFACE COATING OF METAL PARTS AND PRODUCTS. (Adopted 6/11/1979, revised 7/10/1990, 7/24/1990, 11/13/1990, 4/21/1995, and 1/20/2000, and 1/date of amended rule adoption)

#### A. Applicability

This rule is applicable to any person who manufactures, any metal part coating or metal product coating for use within the District, as well as to any person who uses, applies, or specifies solicits the use or application of any metal part coating, metal product surface coatings, or associated solvent within the District for metal parts and products.

#### B. Exemptions

- 1. The provisions of Section D shall not apply to any non-complying coatings with separate formulations used in volumes of less than 20 gallons of each non-complying formulation per stationary source in any calendar year, provided that To qualify for this exemption from Section D, the total volume of non-complying coatings used at a stationary source does shall not exceed 55 gallons annually. Coatings used for operations that are exempt per Sections B.2, B.3, and B.12 shall not be included in calculating the volume of coatings used under this exemption. Any person claiming this exemption shall maintain on a daily basis records consistent with Section H.6 and make them available to the District for review upon request. In addition, such person shall be subject to the records required by Section H.
- The provisions of Section DE and H shall not apply to touch-up coatings, and repair coatings, and textured finishes coatings, provided Section D limits are met and records are maintained pursuant to a Permit to Operate.
- This Rrule shall not apply to residential non-commercial metal parts and products coating
  operations and associated solvent cleaning.
- 4. The provisions of tThis Rrule shall not apply to the <u>surface</u> coating of parts or products <u>and associated solvent eleaning</u> where the only metal involved is fasteners, nails, pins, rivets, hinges, hasps, and similar devices used to hold the <u>non-metalnonmetal</u> parts together and which do not constitute a substantive part of the total surface area.
- 5. The provisions of tThis Rrule shall not apply to coatings supplied in non-refillable as aerosol products in non-refillable containers having capacities of 18 ounces or less.
- The provisions of tThis Rrule shall not apply to the coating and associated solvent cleaning operations listed below, which are covered under the categories rules cited.
  - a. Aircraft or a Aerospace vehicles or component finishing or refinishing (Rule 337, Surface Coating of Aerospace Vehicles and Components), or;
  - Automobile or truck refinishing (Rule 339, Motor Vehicle and Mobile Equipment Coating Operations), or;
  - c. Marine vessel finishing or refinishing (Rule 317. Organic Solvents), or,
  - d. Stationary structures (Rule 323, Architectural Coatings)-, or

Comment [A13]: Our practice is to add for use within the District and uses text to explain and narrow the scope of the rule. Adding and associated solvent extends the applicability to solvent cleaning. This change stems from a commitment in the 2010 Clean Air Plan (CAP).

Comment [A14]: The July 25 draft included a lead-in sentence. Workshop attendees and CAC members indicated on Aug. 10 that the wording was confusing. Hence, staff re-wrote the exemption section for improved clarity.

Comment [A15]: Our protocol is to specify requirements are on a stationary source basis. By adding per stationary source, misinterpretations that the requirements are on a facility basis should be avoided. See Rule 102 for definitions of stationary source and facility.

Comment [A16]: The original exemption is essentially retained in response to industry concerns. Deleting the "18 ounce or less" text is consistent with the PAR 337.B.3 exemption. The SC and VC metal coating rules do not include capacities in the "aerosol coating product" exemptions either.

**Comment [A17]:** Including rule titles for referenced rules follows an EPA recommendation.

- e. Application of adhesives and sealants (Rule 353, Adhesives and Sealants).
- Any coating and associated solvent eleming subject to the requirements of this Rulerule shall be exempt from the requirements of any other coating or solvent rule except Rules 317, Organic Solvents, and Rule 322, Metal Surface Coating Thinner and Reducer.
- 8. This rule shall not apply to any cleaning performed with a solvent (including emulsions) that contains two percent by weight or less of each of the following:
  - a. Reactive organic compounds, and
  - Toxic air contaminants (as determined by generic solvent data, solvent manufacturer's composition data or by a gas chromatography test and a mass spectrometry test).
  - c. Any person claiming this exemption shall maintain the records specified in Sections
    H.1.a and H.1.f in a manner consistent with Section H.9 and make them available for review.
- This rule shall not apply to stripping of cured coatings, cured adhesives, cured sealants, and cured inks, except the stripping of such materials from spray application equipment.
- 10. Sections D, E, and J, shall not apply to any of the following:
  - Stencil coatings; and
  - b. Safety-indicating coatings; and
  - c. Magnetic data storage disk coatings; and
  - d. Solid-film lubricants; and
  - e. Electric-insulating and thermal-conducting coatings.
- 11. Section J shall not apply to any of the following:
  - Cleaning of semiconductor and microelectromechanical devices undergoing
     manufacturing processes involving thin film deposition, vacuum deposition, dry etching,
     or metal lift-off operations; including any maintenance activities associated with such
     operations;
  - Cleaning of metal in electronic components;
  - Cleaning of encasements, including decoy shells or box casings, for electronic components that have a total surface area that is less than 2 square feet;
  - Cleaning of parts, subassemblies, or assemblies that are exposed to strong oxidizers or reducers (e.g., nitrogen tetroxide, liquid oxygen, or hydrazine);
  - e. Cleaning of transparencies, polycarbonate, or glass substrates;
  - Cleaning of solar cells, coated optics, laser hardware, scientific instruments, highprecision optics, telescopes, microscopes, and military fluid systems;
  - g. Cleaning or stripping of coating overspray from personal protective equipment.

**Comment [A18]:** Essentially the same as the Rule 321.B.1 exemption.

**Comment [A19]:** Same as the Rule 321.B.4 exemption.

**Comment [A20]:** Similar to provisions in South Coast AQMD (SC) Rule 1107(f)(1) and San Joaquin Valley Unified APCD (SJV) Rule 4603.4.8.

This rule shall not apply to coatings that contain less than 20 grams of reactive organic compound per liter (0.17 pounds of reactive organic compound per gallon) of coating, less water and less exempt compounds, as applied.

#### C. Definitions

See Rule 102, <u>Definitions</u>, for definitions not limited to this rule. For the purposes of this <u>Rulerule</u>, the following definitions shall apply:

1. "Aircraft or Aerospace Vehicle or Component" means any fabricated part, processed part, assembly of parts, or completed unit of any aircraft including but not limited to airplanes, helicopters, missiles, rockets, or and space vehicles includes satellites.

2. "Air dDried" means a process whereby the coated object is cured or dried at a temperature less than 90°C degrees Celsius (194°F degrees Fahrenheit).

"Associated Solvent" means any solvent used in a solvent cleaning machine or infor solvent cleaning operations subject to this rule performed in association with surface coating of any metal part or product.

3. "Baked" means a process whereby the coated object is heated to a temperature of 90°C degrees Celsius (194°F degrees Fahrenheit) or greater for the purpose of curing or drying.

"Coating" means a material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. Such materials include, but are not limited to, paints, varnishes, sealers, and stains. For the purposes of Rule 330, photoresist coatings are not considered to be coatings.

"Compliant Material" means any coating or solvent that has a reactive organic compound content that complies with the applicable limit in Sections D.1, D.2, D.3, or J.

"Control" means the reduction, by destruction or removal, of the amount of affected pollutants in a gas stream prior to discharge to the atmosphere.

4.——"Detailing or Touch-up Guns" are small air spray equipment, including air brushes, that operate at no greater than 5 efm-cubic feet per minute air flow and no greater than 50 pounds per square inch gauge (psig.) air pressure and are used to coat small products or portions of products.

"Dip Coat Application" means any process in which a substrate is immersed in a solution (or dispersion) containing the coating material, and then withdrawn.

"Electric-Insulating and Thermal-Conducting Coating" means a coating that displays an electrical insulation of at least 1,000 volts direct current per mil (0.001 of an inch) on a flat test plate and an average thermal conductivity of at least 0.27 British thermal units per hour-foot-degree-Fahrenheit.

"Electric-Insulating Varnish" means a non-convertible-type coating applied to electric motors, components of electric motors, or power transformers, to provide electrical, mechanical, and environmental protection or resistance.

"Electrodeposition" means the application of a coating using a water-based electrochemical bath process. The component being coated is immersed in a bath of the coating. An electric potential is applied between the component and an oppositely charged electrode hanging in the bath. The electric potential causes the ionized coating to be electrically attracted, migrated, and deposited on the component being coated.

 "Electrostatic Application" means using a sufficient charging of atomized paint droplets to cause deposition by electrostatic attraction. This application requires a minimum 60kV power supply. **Comment [A21]:** The District protocol is to remove degree symbols, abbreviations, and acronyms. Hence, they are spelled out here and elsewhere.

**Comment [A22]:** Staff revised the definition to avoid confusion when the "associated solvent" is exempt from the rule and to expand the definition to include solvents used in solvent cleaning machines.

Comment [A23]: The term is used in 330.H.5.

Comment [A24]: The Section B.10.e exemption uses the electric-insulating and thermal-conducting coating term. The definition is modeled on the SC Rule 1107 definition.

Comment [A25]: This term coupled with extreme performance coating are replacing industrial maintenance coating. The electric-insulating varnish definition is modeled on the SC Rule 1107 definition.

**Comment [A26]:** Replaced by the term "electrostatic spray" and relocated it to Rule 102.

 "Exempt Organic Compounds" means those compounds listed as exceptions in the definition of "Reactive Organic Compounds" in Rule 102.

"Extreme Performance Coating" means a coating used on a metal surface where the coated surface is, in its intended use, subject to the following:

- a. Chronic exposure to corrosive, caustic or acidic agents, chemicals, chemical fumes, chemical mixtures or solutions including water immersion; or
- b. Repeated exposure to temperatures in excess of 250 degrees Fahrenheit; or
- Repeated heavy abrasion, including mechanical wear and repeated scrubbing with industrial grade solvents, cleansers, or scouring agents.

"Flow Coat Application" means any coating application system, with no air supplied to the nozzle, where paint flows over the part and the excess coating drains back into the collection system.

7.——"Grams of Reactive Organic Compounds per Liter of Coating, Less Water and Less Exempt Compounds" means the weight of reactive organic compounds per combined volume of reactive organic compounds and coating solids and can be calculated by the following equation:

Grams of ROC reactive organic compounds

per liter of coating, less water and less =

exempt compounds

$$W_s - W_w - W_{es}$$
 $V_w - V_{wr} - V_{wr}$ 

Where:  $W_s$  = Weight of volatile compounds in grams

 $W_w$  = Weight of water in grams

 $W_{es}$  = Weight of exempt organic compounds in grams

 $V_m$  = Volume of material in liters  $V_w$  = Volume of water in liters

 $V_{es}$  = Volume of exempt organic compounds in liters

**8.** — "Hand Application Method" means the application of a surface coating by manually held non-mechanically operated equipment. Such equipment includes paint brush, hand-roller, trowel, spatula, dauber, rag or sponge.

9. "High Volume Low Pressure Spraying" means using spray equipment with air pressure between 0.1 and 10.0 psi and air volume greater than 15.5 cfm per spray gun.

 "Industrial maintenance coating" means high performance coatings which are formulated for the purpose of heavy abrasion, water immersion, chemical, corrosion, temperature, electrical or solvent resistance.

"Liquid Leak" means any coating, stripper, or solvent leak at a rate of more than three drops per minute or any visible liquid mist.

"Magnetic Data Storage Disk Coating" means a coating used on a metal disk which stores data magnetically.

41. — "Metal Part or Product" means any part, assembly of parts or completed unit fabricated in part or in total from metal.

"Non-Complying Coating" means a coating with a reactive organic compound content above a limit specified in Section D.1. 2, or 3.

"Non-Powder Coating" means any coating that is not a powder coating.

Comment [A27]: The District has replaced exempt organic compound with exempt compound in Rule 330. Also, we are adding exempt compound to Rule 102, Definitions.

**Comment [A28]:** Added "including water immersion" per Industry request at the August 10, 2011 workshop.

Comment [A29]: The definition is modeled on the SC Rule 1107 definition. This term coupled with electric-insulating varnish are replacing industrial maintenance coating.

**Comment [A30]:** Replaced by the term "high volume low pressure spraying equipment" and relocated it to Rule 102.

Comment [A31]: Rule 323, Architectural Coatings, uses the industrial maintenance coatings term and ARB recommends it be deleted from Rule 330. Extreme performance coating and electricinsulating varnish are used in its place.

**Comment [A32]:** This term is no longer used in the rule. Hence, it should be deleted.

"Noncompliant Material" means any coating or solvent that has a reactive organic compound content that does not comply with the applicable limit in Sections D.1, D.2, D.3, or J.

**Comment [A33]:** The term is used in 330.H.5.

"Powder Coating" means any coating applied as fine particle solids with less than 4 percent by weight reactive organic compound or other liquid carriers.

#### "Reactive Organic Compound" as defined in Rule 102, Definitions.

12. "Repair Coating" means a coating used to re-coating portions of a previously coated product due to-which has sustained mechanical damage to the coating following normal painting coating operations.

"Safety-Indicating Coating" means a coating which changes physical characteristics, such as color, to indicate unsafe conditions.

"Solid-Film Lubricant" means a very thin coating consisting of a binder system containing as its chief pigment material one or more of molybdenum disulfide, graphite, polytetrafluoroethylene (PTFE), or other solids that act as a dry lubricant between faying surfaces.

"Solvent" means any liquid containing any reactive organic compound or any toxic air contaminant, which is used as a diluent, thinner, dissolver, viscosity reducer, cleaning agent, drying agent, preservative, or other similar uses.

"Solvent Cleaning" means any activity, operation, or process (including, but not limited to, surface preparation, cleanup, or wipe cleaning) performed outside of a solvent cleaning machine, that uses solvent to remove uncured adhesives, uncured coatings, uncured inks, uncured polyester resin material, uncured sealant, or other contaminants, including, but not limited to, dirt, soil, oil, lubricants, coolants, moisture, fingerprints, and grease, from parts, products, tools, machinery, application equipment, and general work areas. Cleaning spray equipment used for the application of coating, adhesive, ink, polyester resin material, or sealant is also considered to be solvent cleaning irrespective of the spray material being cured.

"Solvent Cleaning Machine" means any device or piece of equipment that uses solvent liquid or vapor to remove soils, moisture, or other contaminants from the surfaces of materials. Types of solvent cleaning machines include, but are not limited to, batch cold, batch vapor, in-line cold, in-line vapor, remote reservoir, and gas-path solvent cleaners. Buckets, pails, and beakers with capacities of 3.785 liters (1.00 gallon) or less are not considered solvent cleaning machines. However, the use of such a container or similar containers (e.g., hand-held spray bottles) with a liquid solvent for cleaning is considered to be solvent cleaning. Any device or piece of equipment used exclusively for stripping shall not be considered to be a solvent cleaning machine.

## "Stationary Source" as defined in Rule 102, Definitions.

"Stencil Coating" means an ink or a coating which is rolled or brushed onto a template or stamp in order to add identifying letters and/or numbers to metal parts and products.

"Texture Coating" means any coating that is applied to a metal part or product which, in its finished form, consists of discrete raised spots of the coating.

43. "Touch-uUp Coating" means that portion of the coating operation which is separate from the a coating used to cover minor coating imperfections appearing after the main coating operation process but necessary to cover minor imperfections or to achieve coverage as required.

"Touch Up and Repair Operation" means that portion of the coating operation that is the incidental application of coating used to cover minor imperfections in the coating finish or to achieve complete coverage. This definition includes out of sequence or out-of-cycle coating.

**Comment [A34]:** Section B.10 uses the **safety-indicating coating** and **solid-film lubricant** terms.

Comment [A35]: Solvent, solvent cleaning, and solvent cleaning machine are the same definitions found in Rule 321. Solvent includes any liquid containing any toxic air contaminant.

**Comment [A36]:** Section B.10 uses this term.

14. "Transfer efficiency" means the ratio of the weight of coating solids adhering to the object being coated to the weight of coating solids used in the application process, expressed as a percentage.

**Comment [A37]:** This term has been relocated to Rule 102.

#### D. Requirements — Reactive Organic Compounds Limits

A-No person shall not apply any coating or specify solicit the use of any coating on any metal part or product subject to the provisions of this Rulerule, which, as applied, emits or may emit contains reactive organic compounds into the atmosphere in excess of the following limits. These limits are expressed in grams of reactive organic compound per liter or pounds of reactive organic compound per gallon of coating, less water and less exempt organic compounds.

**Comment [A38]:** Our practice is to improve text flow by changing the sentence structure in this manner.

**Comment [A39]:** ARB suggested the text changes in a letter dated February 2, 1995.

Non-Powder Coatings except Air Dried <u>Industrial Maintenance Extreme Performance Coatings and Air Dried Electric-Insulating Varnish</u>:

Air Dried Baked

340 grams per liter 275 grams per liter 2.8 pounds per gallon 2.3 pounds per gallon

 Non-Powder Industrial Maintenance Extreme Performance Coatings and Electric-Insulating Varnish - 420 grams per liter, 3.51 pounds per gallon (when air dried)

- 3. Powder Coatings 50 grams per liter, 0.42 pound per gallon
- 4. Sources A person may elect to use an add-on exhaust-control system equipment to achieve as an alternative to meeting the requirements compliance with provisions of Sections D.1, D.2, D.3, E, and J. provided that the control equipment meets all of the applicable requirements of Sections a and b-below are met. Such control equipment must be approved in advance by the Control Officer. Any person choosing to install such control equipment system shall obtain an Authority to Construct from the District prior to installation.

 The control device shall reduce emissions from an emission collection system by at least 95 percent by weight.

- The emission collection system which collects and transports emissions to an air
  pollution control device shall collect at least 90 percent by weight of the emissions
  generated by the sources of emissions.
- a. The overall efficiency (the capture efficiency multiplied by the control device efficiency)
  of the total system shall be at least 85.5 percent, by weight. Alternatively, the control
  device reactive organic compound exhaust concentration shall not exceed 10 parts per
  million by volume as propane or other limit approved by the Environmental Protection
  Agency, the Air Resources Board, and the Control Officer.
- Combustion temperature shall be continuously monitored when operating a thermal incinerator.
- Inlet and exhaust gas temperatures shall be continuously monitored when operating a catalytic incinerator.
- . Control device efficiency shall be continuously monitored when operating a carbon adsorber or a control device other than a thermal or catalytic incinerator.
  - Compliance through the use of an add-on control system shall not result in affected pollutant emissions in excess of the affected pollutant emissions that would result from compliance with Sections D.1, D.2, D.3, E, and J.

**Comment [A40]:** Including **pounds per gallon** equivalents is an approach used in Rule 337.

Comment [A41]: Deleting industrial maintenance coating and replacement it with extreme performance coatings and electricinsulating varnish follows an ARB recommendation.

**Comment [A42]:** Following other air district methods, sources may comply with the Section E (application equipment) and Section J (solvent ROCcontent) provisions by using an add-on control system.

**Comment [A43]:** Similar to the Rule 321.N.1 provision.

**Comment [A44]:** Subsections b - d mirror Rule 353.I provisions.

Comment [A45]: Similar to Rule 321.N.6. (Reactive organic compound changed to affected pollutant to include TACs.)

## E. Requirements - Application Equipment

ANo person shall not apply coatings subject to the provisions of this rule except by using properly operated unless the application is performed with equipment and by operating according to the manufacturers operating guidelines. In addition, except as provided in Section D.4, the application method employed shall be one of the following:

**Comment [A46]:** ARB suggested the addition of according to the manufacturers operating guidelines.

- 1. Electrostatic spray application, or
- 2. Flow coat application, or
- 3. Dip coat application, or
- 4. High volume, low pressure spraying equipment, or
- 5. Electrodeposition, or
- 6. Hand application methods, or
- Detailing or touch-up guns, or
- Any other coating application method that is demonstrated to the satisfaction of approved by the
   Control Officer, the Air Resources Board, and the Environmental Protection Agency, achieves that
   has a coating transfer efficiency at least equivalent to or greater than the
   65 percent transfer
   efficiency as demonstrated by measured using the test method specified in Section I.4.

## F. Requirements — Closed Containers General Operating

Any person who owns, operates, or uses any application equipment to surface coat any metal part or product shall meet the following requirements:

- All reactive organic compounds-containing materials, used or unused, including, but not limited to, surface coatings, thinners, cleanup solvents, or surface preparation materials shall be stored and disposed of in elosed nonabsorbent and nonleaking containers equipped with tight-fitting covers.

  All covers shall be in place unless adding material to or removing material from the containers, and opened only during extraction or introduction of material for mixing, use or storage the containers are empty, or doing maintenance/inspection of the containers.

  After distillation recovery of solvent, waste solvent residues shall not contain more than 20 percent of reactive organic compound by weight as determined by the test method specified in Section 1.7.
- All application equipment, ventilation system, and emission control equipment shall be installed, operated, and maintained consistent with the manufacturer's specifications.
- Waste solvent, waste solvent residues, and any other waste material that contains reactive organic compounds shall be disposed of by one of the following methods: All containers holding surface eoating or solvent shall be free of liquid leaks. All application equipment, solvent distillation units, and gun washers shall not have any liquid leaks, visible tears, holes, or cracks. Any such liquid leak, visible tear, hole, or crack is a violation of this rule.

Any liquid leak, visible tear, hole, or crack that is detected shall be repaired within one day from discovery, or the equipment shall be drained of all surface coating or solvent, consistent with Section F.1 provisions, and shut down until replaced or repaired. Application equipment, solvent distillation units, and gun washers shall not be operated when leaking.

. A commercial waste solvent reclamation service licensed by the State of California.

At a facility that is federally or state licensed to treat, store or dispose of such waste.

Recycling in conformance with Section 25143.2 of the California Health and Safety Code.

- 4. All covers, valves, drain plugs, and other closure devices designed to reduce surface coating or solvent evaporation shall not be removed or opened except to process work or to perform monitoring, inspections, maintenance, or repairs that require the removal of the covers or other closure devices.
- Any surface coating or solvent spills shall be wiped up immediately and the used absorbent material (e.g., cloth, paper, sand, sawdust, etc.) shall be stored in closed containers that are handled in accordance with Section F.1.
- 6. The handling and transfer of coatings and cleaning solvents to or from enclosed systems, vats, waste containers, and other cleaning operation equipment that hold or store fresh or spent coatings and cleaning solvents shall be conducted in such a manner to minimize spills.
- Any storage of any compound. Containers used to store coating, solvent, or any waste material that
  contains reactive organic compounds subject to this rule shall be marked or clearly labeled
  indicating the name of the material they contained be done in containers that meet the labeling
  requirements of Section G.

G. Requirements - Manufacturer Labeling

- Each container of any coating subject to this rule shall display the date on which the contents were manufactured or a code indicating the date of manufacture. Each manufacturer of such coatings shall file with the Control Officer and the Executive Officer of the California Air Resources Board, an explanation of each code.
- 2. Each container of any coating subject to this rule shall display a statement of the manufacturer's recommendation regarding thinning of the coating. This recommendation shall not apply to the thinning of coatings with water. The recommendation shall specify that the coating is to be employed without thinning or diluting under normal environmental and application conditions unless any thinning recommended on the label for normal environmental and application conditions does not cause a coating to exceed its applicable standard for reactive organic compound content.
- 3. Each container of any coating subject to this rule shall display the maximum reactive organic compound content of the coating, as applied, and after any thinning as recommended by the manufacturer. Reactive organic compound content shall be displayed as grams of reactive organic compounds per liter or pounds of reactive organic compound per gallon of coating, less water and less exempt solventscompounds. The volatile organic compound content may be displayed instead of the reactive organic compound content as long as the manufacturer's definition of volatile organic compound is consistent with the definition of reactive organic compound contained in District Rule 102, Definitions. Reactive organic compound content displayed may be calculated using product formulation data and the formula in Section C, or may be determined using the test method in Section 141.1.

**Comment [A47]:** The **housekeeping** provisions are similar to requirements found in Rule 321.D.

Comment [A48]: Adding for reactive organic compound content follows an ARB recommendation.

**Comment [A49]:** Inserting **and the formula in Section C** follows an ARB suggestion relative to Rule 337 (letter dated February 2, 1995).

#### H. Requirements - Recordkeeping

Any <u>Persons</u> person subject to this <u>Rulerule</u> shall comply with the following requirements. <u>Any owner or operator of any stationary source comprised of more than one facility may comply with the following requirements on a facility basis.</u>

- 1. Maintain a current <u>listingfile</u> of all reactive organic compound\_containing materials <u>in use at the stationary source</u> subject to this <u>Rulerule</u>. The file shall provide all of the data necessary to evaluate compliance and shall include the following information, as applicable:
  - material name and manufacturer identification (e.g., brand name, stock identification number);
  - b. application method;
  - c. material type (i.e. e.g., air dried or baked enamel, powder coating, industrial maintenance extreme performance coating, cleanup solvent, etc.), type operation (e.g., coating, stripping, or solvent cleaning), and, for non-powder coating operations, the drying method and equipment coated;
  - specific mixing ratio data (e.g., component volumes or weights) of each component for each batch sufficient to determine the mixture's reactive organic compound content;
  - e. the corresponding reactive organic compound content limit from Sections D.1, D.2, D.3
    and J.1 and the maximum-actual as-applied reactive organic compound content of each
    the materials used, less water and less exempt compounds (including thinning solvents);
    and
  - f. current coating and solvent manufacturer specification sheets, Material Safety Data Sheets, product data sheets, or air quality data sheets, which list the reactive organic compound content of each material in use at the stationary source subject to this rule. Compliance with this provision may be done by ensuring the manufacturer's specifications are listed on the product container.
- For each industrial maintenance coating, a list of each part or product coated on a monthly basis. [Reserved]
- Current coating manufacturer specification sheets, Material Safety Data Sheets or current air
  quality data sheets, which list the reactive organic compounds content of each material in use at
  their facility, shall be available for review on site.
- 43. Maintain purchase records identifying the type or name and the volume of material purchased for each reactive organic compounds-containing material, purchased for use at the stationary source. The records shall include, but not be limited to, the following:
  - material name and manufacturer identification (e.g., brand name, stock identification number); and
  - b. material type (e.g., air dried or baked enamel, powder coating, extreme performance coating, cleanup solvent, etc.).
  - c volume of material purchased;
  - d. date of purchase; and
  - e. receipts of each purchase

**Comment [A50]:** The District added this in response to an Industry comment received during the Aug. 10, 2011 workshop.

**Comment [A51]:** Our protocol is to specify requirements are on a **stationary source** basis. By adding **in use at the stationary source**, misinterpretations that the requirements are on a **facility basis** should be avoided.

**Comment [A52]:** Essentially the same text found in Rule 353 O.1

**Comment [A53]:** Added in response to a comment by VAFB.

**Comment [A54]:** We decided to obtain information on the coating categories and equipment coated in 330.H.l.c and make this Section reserved.

**Comment [A55]:** Moved to 330.H.1.f.

- Maintain records of the disposal method of disposal each time waste solvent, or waste solvent residue, or other waste material that contain reactive organic compounds is removed from the stationary source for disposal.
- 5. Maintain For each material maintained in response to Section H.1.a. maintain, at a minimum, on a monthly basis for compliant material and on a daily basis for noncompliant material. a record of the following:
  - a. volume used (gallons per day, gallons per month);
  - b. reactive organic compounds content (grams per liter or pounds per gallon); and
  - e. and resulting reactive organic compound emissions (pounds per day, pounds per month)
     of each reactive organic compounds containing material used.

For permitted facilities stationary sources and users of non-compliant coatings, all records required by this Subsection and Subsection Section H.1 shall be summarized for each calendar year and submitted to the District by March 1 of the following year. The annual report shall include the name and address of the Permittee, the Permit to Operate number that the coating and solvent cleaning is subject to (if permitted), and/or a statement that the annual report includes non-compliant coating usage information.

- 6. Operators of facilities that use non-compliant coating materials that do not achieve compliance through the operation of emission control equipment shall maintain daily records of the volumes of non-compliant coating materials used. In addition, operators claiming the Section B.1 exemption shall maintainAny person claiming an exemption under the Section B.1 shall maintain:
  - Daily records of the volumes in gallons of non-sompliant complying coating materials used by each separate formulation at the stationary source.
  - b. Annual running totals, from January 1 of each <u>calendar</u> year, of the volume <u>in gallons</u> of non-<u>compliant complying</u> coating materials used at the stationary source for:
    - 1) Each separate formulation.
    - 2) All formulations.
- 7. Operators of facilities For any stationary source that uses non-compliant coating materials with compliance achieved through the operation of emission control equipment as an alternative to meeting the requirements of Sections D.1, D.2, D.3, E, or J, shall maintain daily records of key operating parameter values and maintenance procedures which that demonstrate continuous operation and compliance of the emission control device system during periods of emission producing activities shall be maintained. These parameters shall include, but not be limited to:
  - a. Hours of operation;
  - b. All maintenance work that requires the emission control system to be shut down; and
  - c. All information needed to demonstrate continuous compliance with Section D.4, such as temperatures, pressures, and/or flow rates.
- If an operator or District staff discovers a liquid leak in a container holding surface coating or solvent, or a liquid leak, visible tear, hole, or crack in application equipment, a solvent distillation unit, or in a gun washer, the operator shall record:

**Comment [A56]:** Revised to show "Section H.1.a" to exclude MSDSs per clarification request received during the August 10, 2011 workshop.

Comment [A57]: The daily recordkeeping provision was added for consistency with the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies."

**Comment [A58]:** Moved the annual reporting requirements to Section L per industry suggestion

**Comment [A59]:** Subsections a - c are from Rule

January 20, 2000[date of amended rule adoption]

the date of discovery;

the corrective action taken; and

the date of repair or equipment replacement.

All-Any records required\_by\_to be maintained pursuant to this rule shall be kept on site for at least 2 years unless a longer retention period is otherwise required by state or federal regulation(s). Such records shall be readily available for inspection by the Control Officer or designated representative upon request for the previous 36 month period and review by the District.

#### I. Requirements — Compliance Provisions and Test Methods

- 1. Coatings and solvent reactive organic compound content shall be determined measured using by the Environmental Protection Agency Reference Method 24\_er-its constituent methods, or an equivalent method approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer. The determination of exempt compounds shall be performed in accordance with ASTM D 4457-1991, "Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph," ASTM International. Alternatively, determination of exempt compounds may be performed in accordance with the South Coast Air Quality Management District Method 303-91, "Determination of Exempt Compounds," August 1996. The reactive organic compound content of materials containing 50 grams of reactive organic compound per liter or less shall be determined by the South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
- Compliance with Section D.4.a. The control device efficiency for reactive organic compound emissions shall be determined by using Air Resources Board Method 100 or Environmental Protection Agency Methods 18, 25, or 25A, the South Coast Air Quality Management District Method 25.1, "Determination of Total Gaseous Non-Methane Organic Emissions as Carbon," February 1991, or the South Coast Air Quality Management District Method 25.3, "Determination of Low Concentration Non-Methane Non-Ethane Organic Compound Emissions from Clean Fueled Combustion Sources," March 2000, as applicable. Environmental Protection Agency Test Method 18 or Air Resources Board Method 422, "Exempt Halogenated VOCs in Gases," September 12, 1990, shall be used to determine emissions of exempt compounds.
- 3. Compliance with Section D.4.b The capture efficiency for reactive organic compound emissions shall be determined according to by verifying the use of a Permanent Total Enclosure and 100 percent capture efficiency as defined by Environmental Protection Agency Method 204 and 204A-F-, "Criteria for and Verification of a Permanent or Temporary Total Enclosure." Alternatively, if an Environmental Protection Agency Method 204 defined Permanent Total Enclosure is not employed, capture efficiency shall be determined using a minimum of three sampling runs subject to data quality criteria presented in the Environmental Protection Agency technical guidance document "Guidelines for Determining Capture Efficiency, January 9, 1995." Individual capture efficiency test runs subject to the Environmental Protection Agency technical guidelines shall be determined by:
  - a. The Temporary Total Enclosure approach of Environmental Protection Agency Methods 204 through 204F; or
  - The South Coast Air Quality Management District "Protocol for Determination of Volatile Organic Compounds (VOC) Capture Efficiency," May 1995.

Comment [A60]: During the CAC meeting on August 10, 2011, a concern about the need to maintain records for 5 years was raised. Staff discovered that EPA had modified its 5 year recordkeeping policy. Hence, per the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies," 2 years record retention is acceptable for sources not subject to Title V permitting or a MACT standard.

**Comment [A61]:** EPA recommended referring to SC Method 313 for determining ROC content of materials containing < 50 g/l.

**Comment [A62]:** EPA recommended that this provision mirror the SC Rule 1122(h)(7)(B) text.

**Comment [A63]:** EPA recommended that the District model the provisions on SC Rule 1122(h)(7)(A) text.

January 20, 2000[date of amended rule adoption]

- Compliance with Section E.8-Application equipment coating transfer efficiencies shall be determined measured using South Coast Air Quality Management District Method "Spray Equipment Transfer Efficiency Test Procedure of Equipment User," May 24, 1989.
- 5. The control device efficiency for toxic air contaminant emissions that are not reactive organic compounds shall be determined using:
  - a. an Environmental Protection Agency approved test method or methods, or
  - in the case where there is no Environmental Protection Agency approved test method, a
     District approved detection method applicable for each target toxics specie.
  - c. the Control Officer may require more than one test method on any emission control device where necessary to demonstrate that the overall efficiency is at least 85.5 percent by weight in reducing emissions of reactive organic compounds and/or toxic air contaminants. Any technique to convert "parts per million by volume" test method results to either 1) "parts per million by weight," or 2) "mass emission rates" (e.g., pounds per hour) shall first be approved by the Control Officer and, if such approval is not provided, then the technique shall not be used to show compliance with this rule.
- 6. The capture efficiency for toxic air contaminant emissions that are not reactive organic compounds shall be determined by using the methods described in Section I.3 modified in a manner approved by the District to quantify the mass of liquid or gaseous reactive organic compounds and/or toxic air contaminants.
- 7. Solvent waste residue reactive organic compound content shall be determined by using Environmental Protection Agency Reference Method 25D or an equivalent method approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer. [Reserved]Emissions of reactive organic compounds from the exhaust of an emission control system shall be measured by the Environmental Protection Agency Method 25, in combination with Environmental Protection Agency Method 18 or the California Air Resources Board Method 422, "Exempt Halogenated VOCs in Gases," September 12, 1990 (to determine emissions of exempt compounds).
- 8. When more than one test method or set of test methods are specified for any testing, a test result showing an exceedance of any limit of this rule shall constitute a rule violation.
- The Environmental Protection Agency test methods in effect on [date of amended rule adoption] shall be the test methods used to meet the requirements of this rule.

J. Requirements - Solvent Cleaning Associated with Surface Coating of Metal Parts and Products

Section J requirements shall apply to any person performing solvent cleaning associated with surface coating of metal parts and products, including, but not limited to, use of wipe cleaning cloths, hand-held spray bottles, squirt bottles, aerosol products, and the cleaning of application equipment. The following requirements become effective [one year from the date of amended rule adoption] and are in addition to the general operating requirements specified in Section F.

1. Solvent Requirements

Except when using an emission control system that meets the requirements of Section D.4, no person shall use any solvent to perform solvent cleaning which exceeds the applicable grams of reactive organic compound per liter of material limit specified in Table 330-1.

**Comment [A64]:** Essentially the same as Rule 321.P.4 provisions.

**Comment [A65]:** Similar to the Rule 321.P.3 requirements

**Comment [A66]:** Added per the EPA recommendation in the Technical Support Document for SJV Rule 4605 (June 2009).

**Comment [A67]:** Section J stems from similar **solvent cleaning** provisions in Rule 321.M.

# Table 330-1: Reactive Organic Compound Content Limits for Solvent Cleaning Associated with Surface Coating of Metal Parts and Products

SOLVENT CLEANING ACTIVITY	ROC Limit, grams of ROC per liter of material (pounds of ROC per gallon of material)
(a) Metal Parts and Products Surface Preparation for Coating Application	<u>25</u> (0.21)
(b) Cleaning of Coatings Application Equipment	<u>25</u> (0.21)

**Comment [A68]:** Both ARB and EPA recommend a 25 g/l limit on the solvent's ROC content.

#### K. Compliance Schedule

Except for Section J requirements, the provisions of this rule are effective on [date of amended rule adoption]. Any person subject to this rule shall comply with the Section J requirements by [one year from the date of amended rule adoption].

Any person who owns, operates, or uses any application equipment to surface coat any metal part or product shall meet the following compliance schedule:

- By [30 days from the date of amended rule adoption], comply with Section F. Requirements -General Operating.
- By [six months from the date of amended rule adoption], comply with the recordkeeping provisions in the following Sections:
  - n. H.1.d mixing volume data,
  - b. H.1.e reactive organic compound content data,
  - c. H.3 purchase records,
  - d. H.4 waste disposal records, and
  - e. H.5 daily records for noncompliant materials.
- By [one year from the date of amended rule adoption], comply with the Section J and Section M
  requirements.
- 4. By [date of amended rule adoption], comply with all other provisions of this rule.

## L. Reporting Requirements

Submittal of an annual report to the District is required if:

A person holds a permit for equipment subject to the requirements of this rule, or
 A person is subject to the requirements of this rule and applies non-complying coatings.

The annual report shall be submitted to the District by March 1 and it shall contain the following information for the previous calendar year:

. monthly records required by Section H.5,

**Comment [A69]:** The compliance schedule provision was expanded in response to a request from Industry.

- annual totals (gallons) based on each of the coating's and solvent's monthly data,
- if claiming the Rule 330.B.1 exemption, annual totals (gallons) of non-complying coatings for each separate formulation and all formulations, per Section H.6.b, and
- 4. if permitted, name and address of the company or agency, and the Permit to Operate number that the surface coating equipment is subject to.

## M. Requirements - Solvent Cleaning Machine

Any person who owns, operates, or uses any solvent cleaning machine shall comply with the applicable provisions of Rule 321, Solvent Cleaning Machines and Solvent Cleaning.

Click here to return to the list of Appendices in the Background Paper.

**Comment [A70]:** The annual report provision was relocated from Section H.5 to a stand-alone section per an Industry suggestion.

**Comment [A71]:** Added to clarify that Rule 321 provisions apply to solvent cleaning machines when used in conjunction with surface coating of metal parts and products.

#### Appendix E Santa Barbara County

Annotated Proposed Amended Rule 337, Surface Coating of Aerospace Vehicles and Components

RULE 337. SURFACE COATING OF AIRCRAFT OR AEROSPACE VEHICLES PARTS AND PRODUCTS COMPONENTS. (Adopted 7/10/1990, revised 7/24/1990, and 10/20/1994, and [date of amended rule adoption])

#### A. Applicability

This rule is applicable to any person who manufactures, any aerospace vehicle coating or aerospace component coating for use within the District, as well as any person who uses, applies, or specifies solicits the use or application of any aerospace vehicle or component surface coatings or associated solvent within the District for aircraft or aerospace vehicle parts and products. Rule 337 does not apply to electronic components.

#### B. Exemptions

- 1. The provisions of Section D\_1 shall not apply to any non-complying coatings with separate formulations used in volumes of less than 20 gallons of each non-complying formulation per stationary source in any calendar year, provided that To qualify for this exemption from Section D\_1, the total volume of non-complying coatings used at a stationary source does not exceed 200 gallons annually. Coatings used for operations that are exempt per Sections B.2, and B.3, B.6.

  B.8, B.11, B.12, and B.13 shall not be included in calculating the volume of coatings used under this exemption. Any person claiming this exemption shall maintain on a monthly daily basis an annual running total of the volume of each separate formulation of coating used under this exemption records consistent with Section H.7 and make them available to the District for review upon request. These coatings shall be subject to the records required by Section H.
- 2. The provisions of Section E<sub>7</sub> and H shall not apply to touch-up and repair, provided Section D.1 limits are met and records are maintained pursuant to a Permit to Operate.
- The provisions of this rule shall not apply to coatings (including adhesive products and sealant products) supplied in non-refillable as aerosol products in non-refillable containers with capacities of 18 ounces or less.
- Any coating and associated solvent eleaning subject to the requirements of this rule shall be exempt from the requirements of Rule 317, Organic Solvents, and Rule 322, Metal Surface Coating Thinner and Reducer. Any coating exempt from this rule shall comply with all other applicable District Rules.
- 5. This rule shall not apply to any cleaning performed with a solvent (including emulsions) that contains two percent by weight or less of each of the following:
  - a. Reactive organic compounds, and
  - Toxic air contaminants (as determined by generic solvent data, solvent manufacturer's composition data or by a gas chromatography test and a mass spectrometry test).
  - Any person claiming this exemption shall maintain the records specified in Sections
    H.1.a and H.1.f in a manner consistent with Section H.9 and make them available for review.

**Comment [A72]:** Under the proposed amended definitions, **aircraft** is synonymous with **aerospace vehicle**.

Comment [A73]: Our practice is to add for use within the District and uses text to explain and narrow the scope of the rule. Adding or associated solvent extends the applicability to solvent cleaning. This change stems from a commitment in the 2010 Clean Air Plan.

Comment [A74]: The last sentence is added for ease of understanding that surface coating of electronic components is not subject to Rule 337. This applicability approach follows the EPA guideline (EPA-453/R-97-004) for this source category. Rule 321 governs the cleaning of electronic components.

Comment [A75]: The July 25 draft included a lead-in sentence. Workshop attendees and CAC members indicated on Aug. 10 that the wording was confusing. Hence, staff re-wrote the exemption section for improved clarity.

Comment [A76]: Our protocol is to specify requirements are on a stationary source basis. By adding per stationary source, misinterpretations that the requirements are on a facility basis should be avoided.

Comment [A77]: EPA recommends daily recordkeeping when using noncompliant coatings. (Ref. EPA's Rule 337 Technical Support Document dated Sept. 20, 1995.)

**Comment [A78]:** Changed PAR to keep original total rule exemption. This approach is consistent with the 1997 CTG for coating operations at aerospace manufacturing and rework operation. SC Rule 1124(I)(5) and VC Rule 74.13.E.6,also have a similar exemption.

**Comment [A79]:** Including rule titles for referenced rules follows an EPA recommendation.

**Comment [A80]:** Essentially the same as the Rule 321.B.1 exemption.

6.	This rule shall not apply to coatings that contain less than 20 grams of reactive organic compound
	per liter (0.17 pounds of reactive organic compound per gallon) of coating, less water and less exempt compounds, as applied.
<u>7.</u>	Section D.2 and J.1.a shall not apply to solvents and strippers used in space vehicle manufacturing and rework.
8.	This rule shall not apply to chemical milling, metal finishing, and electrodeposition (except for electrodeposition of coatings).
9.	Section J.1.a shall not apply to any of the following:
	<ul> <li>Cleaning of encasements, including decoy shells or box casings, for electronic components that have a total surface area that is less than 2 square feet; and</li> </ul>
	b. Cleaning of parts, subassemblies, or assemblies that are exposed to strong oxidizers or reducers (e.g., nitrogen tetroxide, liquid oxygen, or hydrazine); end
	c. Cleaning of aircraft transparencies, polycarbonate, or glass substrates, and
	d. Cleaning of solar cells, coated optics, laser hardware, scientific instruments, high- precision optics, telescopes, microscopes, avionic equipment, military fluid systems, and thermal control surfaces.
	e. Wipe cleaning during the manufacture, assembly, installation, maintenance, or testing of components of breathing oxygen systems that are exposed to the breathing oxygen:
	f. Wipe cleaning and surface activation prior to adhesive bonding:
	Wipe cleaning of aircraft and ground support equipment fluid systems that are exposed to the fluid, including air-to-air heat exchangers and hydraulic fluid systems;
	h. Wipe cleaning of fuel cells, fuel tanks, and confined spaces.
<u>10.</u>	Section E shall not apply to any of the following:
	<ul> <li>Any situation that normally requires the use of an airbrush or an extension on the spray gun to properly reach limited access spaces; and</li> </ul>
	b. The use of airbrush application methods for stenciling, lettering, and other identification markings.
<u>11.</u>	The chemical milling maskant limits in Section D.1, Table 337-1, shall not apply to any of the following:
	a. Touch-up of scratched surfaces or damaged maskant; and
	b. Touch-up of trimmed edges.
<u>12.</u>	Section D.1 shall not apply to electric- and radiation-effect coatings that have been designated as "classified" by the United States Department of Defense.

Comment [A81]: Changed the text to apply to all qualifying coatings. Exempting low ROC paints is similar to the SC Rule 1124(I)(13) exemption. Exempting low ROC adhesives and sealants is consistent with PAR 353.B.7.

**Comment [A82]:** Modeled on the SC Rule 1124(l)(4) exemption.

**Comment [A83]:** Based on the 40 CFR Section 63.741(f) exemption.

**Comment [A84]:** Similar to the Ventura County APCD (VC) Rule 74.13.C.3 exemption.

**Comment [A85]:** Stems from the 40 CFR Section 63.744(e)(10) exemption.

**Comment [A86]:** Added 337..a and d at the suggestion of Raytheon's Sherri Wentz. Staff also added definitions for in Rule 102 for avionic equipment, fluid system, high-precision optics, and scientific instruments.

**Comment [A87]:** 337.B.9.e - h are modeled on exemptions found in 40 CFR Section 63.744(e).

**Comment [A88]:** Similar to the SC Rule 1124(l)(14) exemption.

**Comment [A89]:** Modeled on the SC 1124(I)(11) provision

provision.

**Comment [A90]:** Follows 40 CFR Section 63.747(c)(3)(i) and (ii) exemptions.

**Comment [A91]:** Stems from 40 CFR 63, Subpart GG, Appendix A's definition of **electric or radiation-effect coating**.

**Comment [A92]:** Modeled on the South Coast AQMD (SC) Rule 1124(l)(15) and 1168(j)(13) exemptions. This exemption is needed for consistency with the Rule 353.B.12 exemption.

Regulations, section 94507 et seq.

This rule shall not apply to coatings (including adhesive products and sealant products) subject to the Air Resources Board consumer products regulation found in Title 17 of the California Code of

## 14. Sections D.2 and J.1.a shall not apply to any of the following:

Cleaning or stripping of coating overspray from personal protective equipment;

 Wipe cleaning or stripping during fabrication, assembly, installation, and maintenance of upholstery, curtains, carpet, and other textile materials used in the interior of the aircraft;

Wipe cleaning or stripping of metallic and nonmetallic materials used in honeycomb cores during the manufacture or maintenance of these cores, and cleaning of the completed cores used in the manufacture of aerospace vehicles or components.

#### C. Definitions

See Rule 102, <u>Definitions</u>, for definitions not restricted to interpretation of <u>limited to this rule</u>. Definitions specific to this rule are listed below. For purposes of this rule, the following definitions shall apply:

"Ablative Coating" means any coating that chars when exposed to open flame or extreme temperatures, as would occur during the failure of an engine casing or during aerodynamic heating. The ablative char surface serves as an insulative barrier, protecting adjacent components from the heat or open flame.

"Adhesion Promoter" means any very thin coating applied to a substrate to promote wetting and form a chemical bond with the subsequently applied material.

"Adhesive" means any substance that is used to bond one surface to another surface by attachment or fused union. Adhesives are a type of specialty coating.

1.—"Adhesive Bonding Primer" means any coating primer applied in a very thin film to aircraft or aerospace parts or products components for the primary purpose of providing a primer for a subsequent coat of structural adhesive corrosion inhibition and increased adhesive bond strength by attachment.

"Adhesive Product" means any adhesive, glue, cement, mastic, adhesive bonding primer, adhesive primer, adhesive primer for plastics, and any other adhesive primer. Adhesive products are a type of coating.

"Aerospace Vehicle or Component" means any fabricated part, processed part, assembly of parts, or completed unit, with the exception of electronic components, of any aircraft including but not limited to airplanes, helicopters, missiles, rockets, and space vehicles includes satellites.

 "Aircraft or Acrospace Vehicle" means a fabricated part, assembly of parts or completed unit of any aircraft, helicopter, missile or space vehicle.

"Aircraft Fluid Systems" mean those systems that handle hydraulic fluids, fuel, cooling fluids, or oils.

"Aircraft Transparency" means the aircraft windshield, canopy, passenger windows, lenses and other components which are constructed of transparent materials.

"Airless Spray" means a spray method in which a pump forces the adhesive through an atomizing nozzle at high pressure (1,000 to 6,000 pounds per square inch).

"Antichafe Coating" means any coating applied to areas of moving aerospace components that may rub during normal operations or installation.

"Associated Solvent" means any solvent used in a solvent cleaning machine or in-for solvent cleaning operations subject to this rule performed in association with surface coating of any aerospace vehicle or aerospace component.

**Comment [A93]:** 14.a added at the request of a stakeholder. 14.b and c are modeled on exemptions found in 40 CFR Section 63.744(e).

**Comment [A94]:** Our protocol is to change the lead-in sentences in this manner.

**Comment [A95]:** Most of the proposed new definitions are from 40 CFR 63, Subpart GG or the EPA Control Techniques Guideline (CTG) for this source category (EPA-453/R-97-004, Dec. 1997).

**Comment [A96]:** Same as the Rule 353 "Adhesive" definition.

**Comment [A97]:** Added for ease of understanding the relationship between **adhesive** and **specialty coating**.

**Comment [A98]:** The term is replaced by **aerospace vehicle or components**.

**Comment [A99]:** The term is used in Section

Comment [A100]: Staff revised the definition to avoid confusion when the "associated solvent" is exempt from the rule and to expand the definition to include solvents used in solvent cleaning machines.

- "Barrier Coating" means any coating applied in a thin film to fasteners to inhibit dissimilar metal corrosion and to prevent galling.
- "Bearing Coating" means any coating applied to an antifriction bearing, a bearing housing, or the area adjacent to such a bearing in order to facilitate bearing function or to protect base material from excessive wear. A material shall not be classified as a bearing coating if it can also be classified as a dry lubricative material or a solid film lubricant.
- "Bonding Maskant" means any temporary coating used to protect selected areas of aerospace parts from strong acid or alkaline solutions during processing for bonding.
- "Caulking and Smoothing Compounds" mean semi-solid materials which are applied by hand application methods and are used to aerodynamically smooth exterior vehicle surfaces or fill cavities such as bolt hole accesses. A material shall not be classified as a caulking and smoothing compound if it can also be classified as a sealant.
- "Chemical Agent-Resistant Coating" means any exterior topcoat designed to withstand exposure to chemical warfare agents or the decontaminants used on these agents.
- "Chemical Milling Maskant" means any coating that is applied directly to aluminum components to protect surface areas when chemical milling the component with a Type I or Type II etchant. Type I chemical milling maskants are used with a Type I etchant and Type II chemical milling maskants are used with a Type II etchant. This definition does not include bonding maskants, critical use and line sealer maskants, and seal coat maskants. Additionally, maskants that must be used with a combination of Type I or II etchants and any of the above types of maskants (i.e., bonding, critical use and line sealer, and seal coat) are not included. Maskants that are defined as specialty coatings are not included under this definition. Section C provides definitions of Type II and Type II etchants.
- "Cleaning Operation" means collectively spray-gun, hand-wipe, and flush cleaning operations.
- "Cleaning Solvent" means any liquid material used for hand-wipe, spray gun, or flush cleaning. This definition does not include any solution that contains no reactive organic compounds and no toxic air contaminants.
- "Clear Coating" means a transparent coating usually applied over a colored opaque coating, metallic substrate, or placard to give improved gloss and protection to the color coat. In some cases, a clear coat refers to any transparent coating without regard to substrate.
- "Coating" means any material that is applied to the surface of an aerospace vehicle or component to form a decorative, protective, or functional solid film, or the solid film itself. Adhesives, sealants, and lubricative material are types of specialty coatings.
- "Commercial Exterior Aerodynamic Structure Primer" means any primer used on aerodynamic components and structures that protrude from the fuselage, such as wings and attached components, control surfaces, horizontal stabilizers, vertical fins, wing-to-body fairings, antennae, and landing gear and doors, for the purpose of extended corrosion protection and enhanced adhesion.
- "Commercial Interior Adhesive" means any material used in the bonding of passenger cabin interior components. These components must meet the Federal Aviation Administration fireworthiness requirements.
- "Compatible Substrate Primer" includes two categories: "compatible epoxy primer" and "adhesive primer." "Compatible epoxy primer" means any primer that is compatible with the filled elastomeric coating and is epoxy based. The compatible substrate primer is an epoxy-polyamide primer used to promote adhesion of elastomeric coatings such as impact-resistant coatings. "Adhesive primer" means any coating that (1) inhibits corrosion and serves as a primer applied to bare metal surfaces or prior to

Comment [A101]: Added for ease of understanding that these materials are specialty coatings.

adhesive application, or (2) is applied to surfaces that can be expected to contain fuel. Fuel tank coatings are excluded from this category.

"Compliant Material" means any coating, stripper, or solvent that has a reactive organic compound content or composite partial pressure that complies with the applicable limit in Sections D.1, D.2, or J.1

"Confined Space" means any space that (1) is large enough and so configured that an employee can bodily enter and perform assigned work; (2) has limited or restricted means for entry or exit (for example, fuel tanks, fuel vessels, and other spaces that have limited means of entry); and (3) is not suitable for continuous employee occupancy.

"Contact Bond Adhesive" or "Contact Adhesive" means any adhesive intended by the manufacturer to adhere to itself instantaneously upon contact. The adhesive is applied to both adherends and allowed to become dry, which develops a bond when the adherends are brought together without sustained pressure. for application to both surfaces to be bonded together, is allowed to dry before the two surfaces are placed in contact with each other, forms an immediate bond that is impossible, or difficult, to reposition after both adhesive-coated surfaces are placed in contact with each other, and does not need sustained pressure or clamping of surfaces after the adhesive-coated surfaces have been brought together using sufficient momentary pressure to establish full contact between both surfaces. Contact adhesive does not include rubber cements that are primarily intended for use on paper substrates. Contact adhesive also does not include vulcanizing fluids that are designed and labeled for tire repair only.

"Contact Bond Adhesive-Specialty Substrates" or "Specialty Contact Adhesive" means any contact adhesive that is intended by the manufacturer to be used for the bonding of nonporous substrates to each other, the bonding of decorative laminate in post-forming application, the bonding of decorative laminate to metal, melamine-covered board, or curved surfaces, or the bonding of any substrate to metal, rubber, rigid plastic, or wood veneer not exceeding 1/16 inch in thickness.

"Control" means the reduction, by destruction or removal, of the amount of affected pollutants in a gas stream prior to discharge to the atmosphere.

"Control System" means any combination of pollutant capture system(s) and control device(s) used to reduce discharge to the atmosphere of reactive organic compound or toxic air contaminant emissions generated by a regulated operation.

"Corrosion Prevention System" means any coating system that provides corrosion protection by displacing water and penetrating mating surfaces, forming a protective barrier between the metal surface and moisture. Coatings and compounds containing oils or waxes are excluded from this category.

"Critical Use and Line Sealer Maskant" means any temporary coating, not covered under other maskant categories, used to protect selected areas of aerospace parts from strong acid or alkaline solutions such as those used in anodizing, plating, chemical milling and processing of magnesium, titanium, or high-strength steel, high-precision aluminum chemical milling of deep cuts, and aluminum chemical milling of complex shapes. Materials used for repairs or to bridge gaps left by scribing operations (i.e., line sealer) are also included in this category.

"Cryogenic Flexible Primer" means any primer designed to provide corrosion resistance, flexibility, and adhesion of subsequent coating systems when exposed to loads up to and surpassing the yield point of the substrate at cryogenic temperatures (-minus 275 degrees Fahrenheit and below).

"Cryoprotective Coating" means any coating that insulates cryogenic or subcooled surfaces to limit propellant boil-off, maintain structural integrity of metallic structures during ascent or re-entry, and prevent ice formation.

"Cyanoacrylate Adhesive" means any fast-setting, single component adhesive that cures at room temperature. Also known as "super glue."

"Depainting" means the removal of a permanent coating from the outer surface of an aerospace vehicle or component.

- "Depainting Operation" means the use of a chemical agent, media blasting, or any other technique to remove permanent coatings from the outer surface of an aerospace vehicle or components. The depainting operation includes washing of the aerospace vehicle or component to remove residual stripper, media, or coating residue.
- 3. "Detailing or Touch-up Guns" mean any are-small air spray equipment, including air brushes, that operate at no greater than 5 CFM-cubic feet per minute air flow and no greater than 50 pounds per square inch gauge (Psig) air pressure and are used to coat small products or portions of products.
- "Dip Coat Application" means any process in which a substrate is immersed in a solution (or dispersion) containing the coating material, and then withdrawn.
- "Dry Lubricative Material" means any coating consisting of lauric acid, cetyl alcohol, waxes, or other non-cross linked or resin-bound materials which act as a dry lubricant.
- 4. "Interior Topeoat" means a topcoat used in habitable interior spaces of aircraft.
- 5. "Electric-/ or Radiation-Effect Coatings" means an electrically conductive or insulative coating, or coatings used on radar and antennae enclosures any coating or coating system engineered to interact, through absorption or reflection, with specific regions of the electromagnetic energy spectrum, such as the ultraviolet, visible, infrared, or microwave regions. Uses include, but are not limited to, lightning strike protection, electromagnetic pulse protection, and radar avoidance.
- "Electrodeposition" means the application of a coating using a water-based electrochemical bath process. The component being coated is immersed in a bath of the coating. An electric potential is applied between the component and an oppositely charged electrode hanging in the bath. The electric potential causes the ionized coating to be electrically attracted, migrated, and deposited on the component being coated.
- "Electrostatic Discharge and Electromagnetic Interference Coating" means any coating applied to space vehicles, missiles, aircraft radomes, and helicopter blades to disperse static energy or reduce electromagnetic interference.
- 6. **"Electrostatic Application"** means using a sufficient charging of atomized paint droplets to cause deposition by electrostatic attraction. This application requires a minimum 60kV power supply.
- "Elevated-Temperature Skydrol-Resistant Commercial Primer" means any primer applied primarily to commercial aircraft (or commercial aircraft adapted for military use) that must withstand immersion in phosphate-ester (PE) hydraulic fluid (Skydrol 500b or equivalent) at the elevated temperature of 150 degrees Fahrenheit for 1,000 hours.
- "Epoxy Polyamide Topcoat" means any coating used where harder films are required or in some areas where engraving is accomplished in camouflage colors.
- 7. "Exempt Organic Compounds" means those compounds listed as exceptions in the definition of 
  "Reactive Organic Compounds" in Rule 102.
- "Exterior Primer" means the first layer and any subsequent layers of identically formulated coating applied to the exterior surface of an aerospace vehicle or component where the component is used on the exterior of the aerospace vehicle. Exterior primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and adhesion of subsequent exterior topcoats. Coatings that are defined as specialty coatings are not included under this definition.

**Comment [A102]:** The District protocol is to remove degree symbols, abbreviations, and acronyms. Hence, they are spelled out here and elsewhere.

**Comment [A103]:** Moved to be in alphabetical order

**Comment [A104]:** Replaced by the term "electrostatic spray" and relocated it to Rule 102.

Comment [A105]: Exempt organic compound is replaced by exempt compound in Rule 337. An exempt compound definition is being added to Rule 102, Definitions.

8.——"Extreme Performance Interior Topcoat" means a topcoat used in interior spaces of aircraft areas requiring a fluid, stain, or nicotine barrier.

"Fastener Manufacturer" means any stationary source that coats aircraft fasteners, such as pins, collars, bolts, nuts, and rivets, with solid-film lubricants for distribution.

"Fastener Sealant" means any sealant applied to a device used to join two or more parts together.

9. "Fire Insulation\_Resistant (Interior) Coating" means: a coating used to provide a layer of insulation in the event of an aircraft or engine fire.

- For civilian aircraft, any coating used on passenger cabin interior parts that are subject to the Federal Aviation Administration fireworthiness requirements.
- For military aircraft, any coating used on parts that are subject to the flammability requirements of MIL-STD-1630A and MIL-A-87721.
- For space applications, any coating used on parts that are subject to the flammability requirements of SE-R-0006 and SSP 30233.

"Flexible Primer" means any primer that meets flexibility requirements such as those needed for adhesive bond primed fastener heads or on surfaces expected to contain fuel. The flexible coating is required because it provides a compatible, flexible substrate over bonded sheet rubber and rubber-type coatings as well as a flexible bridge between the fasteners, skin, and skin-to-skin joints on outer aircraft skins. This flexible bridge allows more topcoat flexibility around fasteners and decreases the chance of the topcoat cracking around the fasteners. The result is better corrosion resistance.

"Flight Test Coating" means any coating applied to aircraft other than missiles or single-use aircraft prior to flight testing to protect the aircraft from corrosion and to provide required marking during flight test evaluation.

"Flow Coat Application" means any coating application system, with no air supplied to the nozzle, where paint flows over the part and the excess coating drains back into the collection system.

"Flush Cleaning" means the removal of contaminants such as dirt, grease, oil, and coatings from an aerospace vehicle or component or application equipment by passing solvent over, into, or through the item being cleaned. The solvent may simply be poured into the item being cleaned and then drained, or be assisted by air or hydraulic pressure, or by pumping. Hand-wipe cleaning operations where wiping, scrubbing, mopping, or other hand actions are used are not included.

"Fuel Tank Adhesive" means any adhesive used to bond components exposed to fuel and must be compatible with fuel tank coatings.

40.—"Fuel Tank Coating" means any coating applied to the interior of a fuel tank components or to fuel wetted areas of aircraft to protect it from for the purpose of corrosion and/or bacterial growth inhibition and to assure sealant adhesion in extreme environmental conditions.

11.—"Grams of ROC Reactive Organic Compound per Liter of Coating, Less Water and Less Exempt Compounds" means the weight of ROC reactive organic compound per combined volume of ROC reactive organic compound and coating solids and can be calculated by the following equation:

$$\frac{W_{s} - W_{w} - W_{es}}{Grams(lb) \text{ of } ROC/l(gal) \text{ of } coating} = \frac{V_{w} - W_{w} - W_{es}}{V_{w} - V_{w} - V_{es}}$$

Grams of reactive organic compounds

 $\frac{per\ liter\ of\ coating,\ less\ water\ and\ less}{exempt\ compounds} \equiv \frac{}{V_{m}-V_{w}-V_{es}}$ 

Where:  $W_s$  = Weight of volatile compounds (including water) in grams

 $W_w$  = Weight of water in grams

 $W_{es}$  = Weight of exempt organic compounds in grams

 $V_m$  = Volume of material in liters  $V_w$  = Volume of water in liters

 $V_{es}$  = Volume of exempt organic compounds in liters

For aerospace coatings that contain reactive diluents, the grams of reactive organic compound per liter of coating, less water and less exempt compounds, shall be calculated by the following equation:

 $\frac{Grams \ of \ reactive \ organic \ compounds}{per \ liter \ of \ coating, \ less \ water \ and \ less} \ \ \equiv \ \frac{W_{rs} - W_{rw} - W_{re}}{V_{rm} - V_{rw} - V_{re}}$ 

Where:  $W_{rs}$  = Weight of volatile compounds not consumed during curing in grams

 $W_{rw}$  = Weight of water not consumed during curing in grams

 $\overline{W_{re}}$  = Weight of exempt compounds not consumed during curing in grams

 $V_{rm}$  = Volume of material not consumed during curing in liters  $V_{rw}$  = Volume of water not consumed during curing in liters

 $\frac{V_{re}}{V_{re}}$  = Volume of exempt compounds not consumed during curing in liters

42.—"Hand Application Method" means the application of a surface coating by manually held non-mechanically operated equipment. Such equipment includes paint brush, hand-roller, trowel, spatula, dauber, rag or sponge.

"Hand-Wipe Cleaning Operation" means the removal of contaminants such as dirt, grease, oil, and coatings from an aerospace vehicle or component by physically rubbing it with a material such as a rag, paper, or cotton swab that has been moistened with a cleaning solvent.

43.—"High Temperature Coating" means any coating that, during normal use, must designed to withstand temperatures in excess of more than 350°F degrees Fahrenheit.

14. "High Volume Low Pressure Spraying" means using spray equipment with air pressure between 0.1 and 10.0 psi and air volume greater than 15.5 cfm per spray gun.

"Insulation Covering" means any material that is applied to foam insulation to protect the insulation from mechanical or environmental damage.

"Interior Topcoat" means any topcoat used inhabitable interior spaces of aircraft.

"Intermediate Release Coating" means any thin coating applied beneath topcoats to assist in removing the topcoat in depainting operations and generally to allow the use of less hazardous depainting methods.

"Lacquer" means any clear or pigmented coating formulated with a nitrocellulose or synthetic resin to dry by evaporation without a chemical reaction. Lacquers are resoluble in their original solvent.

"Limited Access Space" means any internal surfaces or passages of an aerospace vehicle or component that cannot be reached without the aid of an airbrush or a spray gun extension for the application of coatings.

"Liquid Leak" means any coating, stripper, or solvent leak at a rate of more than three drops per minute o any visible liquid mist. **Comment [A106]:** Replaced by the term "high volume low pressure spraying equipment" and relocated it to Rule 102.

**Comment [A107]:** Relocated here to be in alphabetical order.

**Comment [A108]:** The term is no longer used in the rule. Hence, the definition should be deleted.

- 15. "Maskant-Chemical Processing" means a coating applied directly to a part to protect surface areas when chemical milling, anodizing, aging, bonding, plating, etching and/or performing other chemical operations on the surface of the part.
- "Long Term Adhesive Bonding Primer" means any adhesive bonding primer that has met the aircraft manufacturers' required performance characteristics following 6,000 hours testing, used for metal to structural core bonding, and with an adhesive that is specified to be cured at a temperature of 350 degrees Fahrenheit plus or minus 10 degrees Fahrenheit.
- "Metalized Epoxy Coating" means any coating that contains relatively large quantities of metallic pigmentation for appearance and/or added protection.
- "Mold Release" means any coating applied to a mold surface to prevent the molded piece from sticking to the mold as it is removed.
- "Natural Draft Opening" means any opening in a room, building, or total enclosure that remains open during operation of the facility and that is not connected to a duct in which a fan is installed. The rate and direction of the natural draft through such an opening is a consequence of the difference in pressures on either side of the wall containing the opening.
- "Non-Complying Coating" means a coating with a reactive organic compound content above a limit specified in Section D.1.
- "Noncompliant Material" means any coating, stripper, or solvent that has a reactive organic compound content or composite partial pressure that does not comply with the applicable limit in Sections D.1, D.2, or J.1.
- "Nonstructural Adhesive" means any adhesive that bonds nonload bearing aerospace components in noncritical applications and is not covered in any other specialty adhesive categories.
- "Optical Anti-Reflective Coating" means any coating with a low reflectance in the infrared and visible wavelength ranges that is used for antireflection on or near optical and laser hardware.
- "Part Marking Coating" means any coatings or inks used to make identifying markings on materials, components, and/or assemblies. These markings may be either permanent or temporary.
- 16. "Pretreatment Wash Primer Coating" means a any organic coating which that contains a small quantity of at least 0.5 percent acids by weight for surface etching and is applied directly to metal or composite surfaces to provide surface etching, corrosion resistance, adhesion, and ease of stripping.
- 47. "Primer" means a the first layer and any subsequent layers of identically formulated coating applied directly to a part for purposes of to the surface of an aerospace vehicle or component. Primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and/or adhesion of subsequent coatings. Primers that are defined as specialty coatings are not included under this definition.
- "Radome" means the nonmetallic protective housing for electromagnetic transmitters and receivers (e.g., radar, electronic countermeasures, etc.).
- "Rain Erosion-Resistant Coating" means any coating or coating system used to protect the leading edges of parts such as flaps, stabilizers, radomes, engine inlet nacelles, etc. against erosion caused by rain impact during flight.
- "Reactive Organic Compound" as defined in Rule 102, Definitions.

**Comment [A109]:** This term and those listed in Table 337-2 under **adhesive bonding primers** are from definitions in SJV Rule 4605.

- "Reactive Diluent" means a liquid which is a reactive organic compound during application and one in which, through chemical and/or physical reactions, such as polymerization, 20 percent or more of the reactive organic compound becomes an integral part of a finished material.
- "Remanufactured Commercial Aircraft Part" means any aerospace component that is built as a spare part or replacement part subject to an existing commercial aircraft specification.
- 18. **"Repair"** means recoating of previously coated product due to damage to the coating following normal painting operations.
- "Rocket Motor Bonding Adhesive" means any adhesive used in rocket motor bonding applications.
- "Rocket Motor Nozzle Coating" means any catalyzed epoxy coating system used in elevated temperature applications on rocket motor nozzles.
- "Rubber-Based Adhesive" means any quick setting contact cement that provides a strong, yet flexible bond between two mating surfaces that may be of dissimilar materials.
- "Scale Inhibitor" means any coating that is applied to the surface of a part prior to thermal processing to inhibit the formation of scale.
- "Screen Print Ink" means any ink used in screen printing processes during fabrication of decorative laminates and decals.
- "Seal Coat Maskant" means any overcoat applied over a maskant to improve abrasion and chemical resistance during production operations.
- 49. "Scalant" means any coating material used to prevent the intrusion applied for the purpose of filling voids and providing a barrier against penetration of water, fuel, air, or other fluids or vapors liquids or solids from certain areas of aerospace vehicles or components. There are two categories of sealants: extrudable/rollable/brushable sealants and sprayable sealants. Sealants are a type of specialty coating.
- 20. "Sealant Bonding Primer" means a coating applied in a very thin film to a part or product for the purpose of providing a primer for a subsequent coat of silicone sealant.
- 21. "Self PrimingSelf-Priming Topcoat" means any coating topcoat that is applied directly to a part or product that is not subsequently overcoated an uncoated aerospace vehicle or component for purposes of corrosion prevention, environmental protection, and functional fluid resistance. More than one layer of identical coating formulation may be applied to the vehicle or component.
- "Sealant Product" means any sealant and sealant primer. Sealant products are a type of coating.
- "Short Term Adhesive Bonding Primer" means any adhesive bonding primer that has met the manufacturers' required performance characteristics following 1000 hours testing, used for metal to metal and metal to structural core bonding, and with an adhesive which is specified to be cured at a temperature of 350 degrees Fahrenheit plus or minus 10 degrees Fahrenheit.
- "Silicone Insulation Material" means any insulating material applied to exterior metal surfaces for protection from high temperatures caused by atmospheric friction or engine exhaust. These materials differ from ablative coatings in that they are not "sacrificial."
- "Solid Film Lubricant" means any very thin coating consisting of a binder system containing as its chief pigment material one or more of the following: molybdenum, graphite, polytetrafluoroethylene (PTFE), or other solids that act as a dry lubricant between faying surfaces.
- "Solids" mean the non-volatile portion of the coating which after drying makes up the dry film.

**Comment [A110]:** Added for ease of understanding the relationship between **sealants** and **specialty coatings**.

"Solvent" means any liquid containing any reactive organic compound or any toxic air contaminant, which is used as a diluent, thinner, dissolver, viscosity reducer, cleaning agent, drying agent, preservative, or other similar uses.

"Solvent Cleaning" means any activity, operation, or process (including, but not limited to, surface preparation, cleanup, or wipe cleaning) performed outside of a solvent cleaning machine, that uses solvent to remove uncured adhesives, uncured coatings, uncured inks, uncured polyester resin material, uncured sealant, or other contaminants, including, but not limited to, dirt, soil, oil, lubricants, coolants, moisture, fingerprints, and grease, from parts, products, tools, machinery, application equipment, and general work areas. Cleaning spray equipment used for the application of coating, adhesive, ink, polyester resin material, or sealant is also considered to be solvent cleaning irrespective of the spray material being cured.

"Solvent Cleaning Machine" means any device or piece of equipment that uses solvent liquid or vapor to remove soils, moisture, or other contaminants from the surfaces of materials. Types of solvent cleaning machines include, but are not limited to, batch cold, batch vapor, in-line cold, in-line vapor, remote reservoir, and gas-path solvent cleaners. Buckets, pails, and beakers with capacities of 3.785 liters (1.00 gallon) or less are not considered solvent cleaning machines. However, the use of such a container or similar containers (e.g., hand-held spray bottles) with a liquid solvent for cleaning is considered to be solvent cleaning. Any device or piece of equipment used exclusively for stripping shall not be considered to be a solvent cleaning machine.

"Sonic and Acoustic Applications" means the use of aerospace materials on aerospace components that are subject to mechanical vibration and/or sound wave cavitation.

"Space Vehicle" means any man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes integral equipment such as models, mock-ups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. Also included is auxiliary equipment associated with test, transport, and storage, which through contamination can compromise the space vehicle performance.

22. "Space Vehicle Coating" means any coating applied to vehicles designed to travel beyond the earth's atmosphere.

"Specialized Function Coating" means any coating that fulfills extremely specific engineering requirements that are limited in application and are characterized by low volume usage. This category excludes coatings covered in other Specialty Coating categories.

"Specialty Coating" means any coating that, even though it meets the definition of a primer, topcoat, or self-priming topcoat, has additional performance criteria beyond those of primers, topcoats, and self-priming topcoats for specific applications. These performance criteria may include, but are not limited to, temperature or fire resistance, substrate compatibility, antireflection, temporary protection or marking, sealing, adhesively joining substrates, or enhanced corrosion protection. The reactive organic compound content limit for the individual specialty coatings are listed in Section D.1, Table 337-2. Definitions for each specialty coating category are provide in Section C.

"Spray Gun" means any device that atomizes a coating or other material and projects the particulates or other material onto a substrate.

"Stationary Source" as defined in Rule 102, Definitions.

23. "Stripper" means a precursor organic compound applied to remove temporary coating, maskant for chemical processing, paint or residue any liquid that is applied to a surface to remove cured or dried coatings such as primers, adhesives (e.g., debonding or unglueing), topcoats, and temporary protective coatings.

Comment [A111]: Solvent, solvent cleaning, and solvent cleaning machine are the same definitions found in Rule 321. Solvent includes any liquid containing any toxic air contaminant.

**Comment [A112]:** Modeled on 40 CFR 63.742 and SJV Rule 4605 definitions. Industry requested clarification of debonding and unglueing provisions. In response, staff added text on stripping cured adhesives. Stripper material limits are in Rule 337.D.2.

- 24. "Structural <u>Autoclavable</u> Adhesive" means any coating adhesive which is applied for the purpose of bonding structural components together used to bond load-carrying acrospace components that is cured by heat and pressure in an autoclave.
- "Structural Nonautoclavable Adhesive" means any adhesive cured under ambient conditions that is used to bond load-carrying aerospace components or for other critical functions, such as nonstructural bonding in the proximity of engines.
- "Surface Preparation" means the removal of contaminants from the surface of an aerospace vehicle or component or the activation or reactivation of the surface in preparation for the application of a coating.
- 25.—"Temporary Protective Coating" means any coating applied to a part to protect it from mechanical and environmental damage during manufacturing provide scratch or corrosion protection during manufacturing, storage, or transportation. Two types include peelable protective coatings and alkaline removable coatings. These materials are not intended to protect against strong acid or alkaline solutions. Coatings that provide this type of protection from chemical processing are not included in this category.
- "Thermal Control Coating" means any coating formulated with specific thermal conductive or radiative properties to permit temperature control of the substrate.
- 26. "Topcoat" means any coating applied over a primer or intermediary coating on an aerospace vehicle or component for purposes such as appearance, identification, camouflage, or protection. Coatings that are defined as specialty coatings are not included under this definition.
- 27. "Touch-up-Up" means that portion of the coating operation which is separate from the main coating process but necessary to cover minor imperfections or to achieve coverage as required.
- "Touch-Up and Repair Operation" means that portion of the coating operation that is the incidental application of coating used to cover minor imperfections in the coating finish or to achieve complete coverage. This definition includes out-of-sequence or out-of-cycle coating.
- 28. "Transfer Efficiency" means the ratio of the weight of coating solids adhering to the object being coated to the weight of coating solids used in the application process, expressed as a percentage.
- "Type I Chemical Milling Maskant" see the "Chemical Milling Maskant" definition.
- "Type II Chemical Milling Maskant" see the "Chemical Milling Maskant" definition.
- "Type I Etchant" means any chemical milling etchant that contains varying amounts of dissolved sulfur and does not contain amines.
- "Type II Etchant" means any chemical milling etchant that is a strong sodium hydroxide solution containing amines
- "Viscosity" means the internal friction of a liquid that makes it resistant to flow.
- "Wet Fastener Installation Coating" means any primer or sealant applied by dipping, brushing, or daubing to fasteners that are installed before the coating is cured.
- 29. "Wing Coating" means any corrosion-resistant coating that is resilient enough to withstand the flexing of the aircraft-wings.

**Comment [A113]:** This term has been relocated to Rule 102.

# D. Requirements — Reactive Organic Compound (ROC) Limits

1. A No person shall not apply any coating or specify solicit the use of any coating on any aerospace vehicle or component subject to the provisions of this rule, which, as applied, emits or may emit contains reactive organic compounds into the atmosphere in excess of the limits shown in the tables below. These limits are expressed in grams of reactive organic compound per liter or pounds per gallon of coating, less water and less exempt organic compounds:

Table 337-1: Reactive Organic Compound Content Limits for Coatings Other than Specialty Coatings
(Grams of Reactive Organic Compound per Liter, Less Water and Less Exempt Compounds)

Coating Type	ROC Limit
	Effective [date of amended]
	<u>rule adoption]</u>
Exterior Primer	<u>350</u>
<u>Primer</u>	<u>350</u>
Self-Priming Topcoat	<u>420</u>
Topcoat	<u>420</u>
Type I Chemical Milling	<u>250</u>
Maskant	
Type II Chemical Milling	<u>160</u>
Maskant	

Table 337-2: Reactive Organic Compound Content Limits for Specialty Coatings (Grams of Reactive Organic Compound per Liter, Less Water and Less Exempt Compounds)

Structural Nonautoclavable Adhesive	<u>850</u>	<u>850</u>
Antichafe Coating	<u>600</u>	<u>420</u>

**Comment [A114]:** Our practice is to improve text flow by changing the sentence structure in this manner.

**Comment [A115]:** ARB suggested the text changes in a letter dated February 2, 1995.

**Comment [A116]:** 40CFR63, Subpart GG, coating types were condensed into those in Table 337-1. Subpart GG limits were compared to existing Rule 337 limits and those found in other air districts. Table 337-1 figures reflect limits that have been achieved in practice.

Comment [A117]: Coating types from EPA's CTG for this source category were added to Table 337-2. The limits in that guidance document were compared to those in other air districts. Lower ROC-content limits that have been achieved in practice were included in lieu of the limits recommended in the CTG. As noted below, some subcategories and limits were based on other air district rules.

Comment [A118]: ARB suggested lowering the limit for adhesion promoter to 250 g/l, Antichafe coating to 420 g/l, and fastener sealant to 600 g/l based on limits in other air districts. A 24-month period for phasing-in the new limits is provided to allow sale through and use of already purchased material.

**Comment [A119]:** Adhesive bonding primer limits and subcategories were modeled on those found in the SC and SJV rules.

Before   24 months after the date of amended rule adoption   Barrier Coating   420   420	Coating Type	ROC Limit	
Barrier Coating         420         420           Bearing Coating         620         620           Caulking and Smoothing Compounds         850         850           Chemical Agent-Resistant Coating         550         550           Clear Coating         520         520           Commercial Exterior Aerodynamic Structure         350         350           Primer         350         350           Corrosion Prevention System Compound         710         710           Cryogenic Flexible Primer         350         350           Cryoprotective Coating         600         600           Dry Lubricative Material         120         4120           Nonfastener Manufacturing         675         5-6675           Electric- for Radiation-Effect         800         6-7800           Electrostatic Discharge and Electromagnetic Interference Coating         800         800           Elevated-Temperature Skydrol-Resistant         350         350		<del>g/l</del> Effective	lb/gal Effective On

**Comment [A122]: Solid film lubricants** subcategories and limits mirror those found in the SC, SJV, and VC rules.

- A-No person shall notapply any stripper or specify solicit the use of any stripper unless it complies
  with one or both of the following:
  - a. The stripper contains less than 400-300 grams/of reactive organic compound per liter-of ROC of material (2.50 pounds of reactive organic compound per gallon).
  - b. The stripper has a true vapor reactive organic compound composite partial pressure of less than 10 mm Hg equal to or less than 9.5 millimeters of mercury at actual usage temperature 20 degrees Celsius.
- 3. Sources A person may elect to use an add-on exhaust control equipment system to achieve as an alternative to meeting the requirements compliance with the provisions of Sections D.1, D.2, E. and J., provided that the control equipment meets all of the applicable requirements of sections a. and b. below are met. Such control equipment must be approved in advance by the Control Officer. Any person choosing to install such control equipment shall obtain an Authority to Construct from the District prior to installation.

The control device shall reduce emissions from an emission collection system by at least 95 percent by weight.

**Comment [A123]:** Change made to 300 g/l per suggestion from the Air Resources Board.

Comment [A124]: Reactive organic compound composite partial pressure is more contemporary than **true vapor pressure**. SJV and VC have reduced the limit to 9.5 mm Hg at 20 degrees C.

**Comment [A125]:** Following other air district methods, sources may comply with the Section E (application equipment) and Section J (solvent ROC-content or pressure) provisions by using an add-on control system.

- b. The emission collection system which collects and transports emissions to an air pollution control device shall collect at least 90 percent by weight of the emissions generated by the sources of emissions.
- a. The overall efficiency (the capture efficiency multiplied by the control device efficiency)
  of the total system shall not be less than 85.5 percent, by weight, Alternatively, the
  control device reactive organic compound exhaust concentration shall not exceed 10 parts
  per million by volume as propane or other limit approved by the Environmental
  Protection Agency, the Air Resources Board, and the Control Officer.
- Combustion temperature shall be continuously monitored when operating a thermal incinerator.
- Inlet and exhaust gas temperatures shall be continuously monitored when operating a
  catalytic incinerator.
- Control device efficiency shall be continuously monitored when operating a carbon adsorber or a control device other than a thermal or catalytic incinerator.
- e. Compliance through the use of an add-on control system shall not result in affected pollutant emissions in excess of the affected pollutant emissions that would result from compliance with Sections D.1, D.2, E, and J.

E. Requirements — Application Equipment

A-No person shall not apply coatings subject to the provisions of this rule except by using properly operated unless the application is performed with equipment and by operating according to the manufacturers operating guidelines. In addition, except as provided in Section D.3, the application method employed shall be one of the following:

- 1. Electrostatic <u>spray</u> application, or
- 2. Flow coat application, or
- Dip coat application, or
- Roll coater, or
- 45. High volume, low pressure spraying (HVLP) equipment, or
- 56. Electrodeposition, or
- 67. Hand application methods, or
- 78. Detailing or touch-up guns, or
- 89. Any other coating application method that approved by the Control Officer, the Air Resources Board, and the Environmental Protection Agency, achieves that has a coating transfer efficiency of at least equivalent to or greater than 65 percent efficiency as demonstrated measured by using the test method specified in Section I.4.
- Except as otherwise provided in Section E.11, air-atomized spray may only be used for the
  application of contact adhesives or specialty contact adhesives.
- 11. For adhesive products and sealant products with an as applied viscosity of 200 centipoise or greater, airless spray, air-assisted airless, and air-atomized spray may be used.

**Comment [A126]:** Similar to the Rule 321.N.1 provision.

**Comment [A127]:** Subsections d - f mirror Rule 353.I provisions.

Comment [A128]: Similar to provision in Rule 321.N.6. (Reactive organic compound changed to affected pollutant to include TACs.)

**Comment [A129]:** ARB suggested the addition of according to the manufacturers operating guidelines.

**Comment [A130]:** The potential new Section E provisions are similar to those found in the SJV Rule 4653 and the SC Rule 1168. The District proposes them to comply with the "every feasible control technique" requirements in state law.

**Comment [A131]:** SC Rule 1168 and SJV Rule 4653 include **roll coater.** 

Comment [A132]: Stems from SJV Rule

**Comment [A133]:** Modeled on SC Rule 1168(c)(5)(H).

### F. Requirements — Closed Containers General Operating

Any person who owns, operates, or uses any surface coating or depainting equipment for any aerospace vehicle or component coating operation shall meet the following requirements:

- 1. All ROC reactive organic compound-containing materials, used or unused, including but not limited to surface coatings, thinners, cleanup solvents, strippers, or surface preparation materials shall be stored and disposed of in elosed nonabsorbent and nonleaking containers equipped with tight-fitting covers. All covers shall be in place unless adding material to or removing material from the containers, and opened only during extraction or introduction of material for mixing, use or storage the containers are empty, or doing maintenance/inspection of the containers. After distillation recovery of solvent, waste solvent residues shall not contain more than 20 percent of reactive organic compound by weight as determined by the test method specified in Section I.10.
- All application equipment, ventilation system, and emission control equipment shall be installed, operated, and maintained consistent with the manufacturer's specifications.
- Waste solvent, waste solvent residues, and any other waste material that contains reactive organic compounds shall be disposed of by one of the following methods: All containers holding surface coating or solvent shall be free of liquid leaks. All application equipment, solvent distillation units, and gun washers shall not have any liquid leaks, visible tears, holes, or cracks. Any such liquid leak, visible tear, hole, or crack is a violation of this rule.

Any liquid leak, visible tear, hole, or crack that is detected shall be repaired within one day from discovery, or the equipment shall be drained of all surface coating or solvent, consistent with Section F.1 provisions, and shut down until replaced or repaired. Application equipment, solvent distillation units, and gun washers shall not be operated when leaking.

- a. A commercial waste solvent reclamation service licensed by the State of California.
- b. At a facility that is federally or state licensed to treat, store or dispose of such waste.
- Recycling in conformance with Section 25143.2 of the California Health and Safety Code.
- 4. All covers, valves, drain plugs, and other closure devices designed to reduce surface coating, stripper, or solvent evaporation shall not be removed or opened except to process work or to perform monitoring, inspections, maintenance, or repairs that require the removal of the covers or other closure devices.
- Any surface coating, stripper, or solvent spills shall be wiped up immediately and the used absorbent material (e.g., cloth, paper, sand, sawdust, etc.) shall be stored in closed containers that are handled in accordance with Section F.1.
- 6. The handling and transfer of coatings, strippers, and cleaning solvents to or from enclosed systems, vats, waste containers, and other cleaning operation equipment that hold or store fresh or spent coatings, strippers, and cleaning solvents shall be conducted in such a manner to minimize spills.
- Any storage of any compound-Containers used to store coating, solvent, or any waste material that contains reactive organic compounds subject to this rule shall be marked or clearly labeled indicating the name of the material they contained be done in containers that meet the labeling requirements of Section G

#### G. Requirements — Manufacturer Labeling

**Comment [A134]:** The **housekeeping** provisions are similar to requirements found in Rule 321.D.

- Each container of any coating subject to this rule shall display the date on which the contents were manufactured or a code indicating the date of manufacture. Each manufacturer of such coatings shall file with the Air Pollution Control Officer and the Executive Officer of the California Air Resources Board an explanation of each code.
- Each container of any coating subject to this rule shall display a statement of the manufacturer's recommendation regarding thinning of the coating. This recommendation shall not apply to the thinning of coatings with water. The recommendation shall specify that the coating is to be employed without thinning or diluting under normal environmental and application conditions unless any thinning recommended on the label for normal environmental and application conditions does not cause a coating to exceed its applicable standard for reactive organic compound content.
- 3. Each container of any coating subject to this rule shall display the maximum ROC reactive organic compound content of the coating, as applied, and after any thinning as recommended by the manufacturer. ROC Reactive organic compound content shall be displayed as g4grams per liter or lb/ga4pounds per gallon of coating, less water and less exempt organic compounds. The VOC volatile organic compound content may be displayed instead of the ROC reactive organic compound content as long as the manufacturer's definition of VOC volatile organic compound is consistent with the definition of ROC reactive organic compound contained in District Rule 102. Definitions. ROC Reactive organic compound content displayed may be calculated using product formulation data and the formula in Section C or may be determined using the test method in Section I.1.

H. Requirements - Recordkeeping

Any <u>Persons</u> person subject to this rule shall comply with the following requirements. <u>Any owner or operator of any stationary source comprised of more than one facility may comply with the following requirements on a facility basis.</u>

- 1. Maintain a current listingfile of all ROC reactive organic compound-containing materials in use at their facilitythe stationary source subject to this rule. This listing shall include: The file shall provide all of the data necessary to evaluate compliance and shall include the following information, as applicable:
  - a. material name and manufacturer identification (e.g., brand name, stock identification number):
  - b. application method;
  - c. material type, and manufacturer's specific use instructions (e.g., specific use for which the material is intended), type operation (e.g., coating, stripping, or solvent cleaning), and, for coating operations, the coating type from Table 337-1 or Table 337-2 and equipment coated;
  - specific mixing ratio data (e.g., component volumes or weights) of each component for each batch sufficient to determine the mixture's reactive organic compound content;
  - e. the corresponding reactive organic compound limit(s) from Sections D.1, D.2, and J.1 and the maximum-actual as applied ROC reactive organic compound content of coating used. If complying using the "reactive organic compound composite partial pressure" method only, provide the actual reactive organic compound composite partial pressure of the materials used-less water and less exempt compounds as applied (including thinning solvents); and

Comment [A135]: ARB recommendation.

**Comment [A136]:** Inserting **and the formula in Section** C follows an ARB suggestion.

**Comment [A137]:** The District added this in response to an Industry comment received during the Aug. 10, 2011 workshop.

**Comment [A138]:** Our protocol is to specify requirements are on a **stationary source** basis. By adding **in use at the stationary source**, misinterpretations that the requirements are on a **facility basis** should be avoided.

**Comment [A139]:** Essentially the same text found in Rule 353.O.1.

Current coating, stripper, and solvent manufacturer specification sheets, Material Safety
Data Sheets, product data sheets, or air quality data sheets, which list the reactive organic compound content of each material in use at the stationary source subject to this rule.

Compliance with this provision may be done by ensuring the manufacturer's specifications are listed on the product container.

**Comment [A140]:** Added in response to a comment by VAFB.

Current coating manufacturer specification sheets, Material Safety Data Sheets or current air
quality data sheets, which list the ROC content of each material in use at their facility, shall be
available for review on site.

Comment [A141]: Moved to 337.H.1.f.

- 32. Maintain purchase records identifying the type or name and the volume of material purchased for each ROC reactive organic compound-containing material purchased for use at the stationary source. The records shall include, but not be limited to, the following:
  - a. material name and manufacturer identification (e.g., brand name, stock identification number); and
  - b. material type (e.g., coating type from Table 337-1 or Table 337-2, cleanup solvent, stripper, etc.).
  - c volume of material purchased;
  - d. date of purchase; and
  - e. receipts of each purchase.
- Maintain records of the disposal method of disposal each time waste solvent, or waste solvent residue, or other waste material that contain reactive organic compounds is removed from the stationary source for disposal.
- Maintain For each material maintained in response to Section H.1.a, maintain at a minimum, on a
  monthly basis for compliant material and on a daily basis for noncompliant material, a record of
  the following:

Comment [A142]: Revised to show "Section H.1.a" to exclude MSDSs per clarification request received during the August 10, 2011 workshop.

- a. volume used (gallons per day, gallons per month);
- b. ROCreactive organic compound content (grams per liter or pounds per gallon); and
- and resulting ROC reactive organic compound emissions (pounds per day, pounds per month) of each ROC containing material used.

For permitted stationary sources and users of non-compliant coatings. These all-records required by this Subsection and Subsection H.5 shall be summarized for each calendar year and submitted to the District by March 1 of the following year. The annual report shall include the name and address of the Permittee, the Permit to Operate number that the coating, stripping, and/or solvent cleaning is subject to (if permitted), and/or a statement that the annual report includes non-compliant coating usage information.

5. Operators of facilities For any stationary source that uses non-compliant coating materials with compliance achieved through the operation of emission control equipment as an alternative to meeting the requirements of Sections D.1, D.2, E, or J, shall maintain daily records of key operating parameter values and maintenance procedures which that demonstrate continuous operation and compliance of the emission control device system during periods of emission producing activities shall be maintained. These parameters shall include, but not be limited to:

**Comment [A143]:** Moved the annual reporting requirements to Section L per industry suggestion.

- a. Hours of operation;
- b. All maintenance work that requires the emission control system to be shut down:
- c. All information needed to demonstrate continuous compliance with Section D.3, such as temperatures, pressures, and/or flow rates.
- 6. All-Any records required by to be maintained pursuant to this rule shall be kept on site for at least 2 years unless a longer retention period is otherwise required by state or federal regulation(s).

  Such records shall be readily available for expeditious shall be retained and available for inspection by the Control Officer or designated representative upon request for the previous 36 month period and review by the District.
- 7. Any person claiming an exemption under Section B.1 shall maintain:
  - a. Daily records of the volumes in gallons of non-compliant complying coating materials
    used by each separate formulation at the stationary source.
  - Annual running totals, from January 1 of each calendar year, of the volume in gallons of non-complying coating materials used at the stationary source for:
    - 1) Each separate formulation.
    - All formulations.

If an operator or District staff discovers a liquid leak in a container holding surface coating, stripper, or solvent, or a liquid leak, visible tear, hole, or crack in application equipment, a solvent distillation unit, or in a gun washer, the operator shall record:

the date of discovery;

b. the corrective action taken; and

the date of repair or equipment replacement.

#### I. Requirements – Compliance Provisions and Test Methods

- 1. ROC content of a coating Coatings and solvent reactive organic compound content shall be determined measured using EPA-by the Environmental Protection Agency Reference Method 24, its constituent methods, or an equivalent method approved by the Control Officer, ARB and EPA Environmental Protection Agency, the Air Resources Board, and the Control Officer. The determination of exempt compounds shall be performed in accordance with ASTM D 4457-851991, "Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph," ASTM International. Alternatively, determination of exempt compounds may be performed in accordance with the South Coast Air Quality Management District Method 303-91, "Determination of Exempt Compounds," August 1996. The reactive organic compound content of materials containing 50 grams of reactive organic compound per liter or less shall be determined by the South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
- Compliance with Section D.3.a The control device efficiency for reactive organic compound emissions shall be determined by using ARB Method 100 or EPA Environmental Protection Agency Test Methods 25, 25A, the South Coast Air Quality Management District Method 25.1, "Determination of Total Gaseous Non-Methane Organic Emissions as Carbon," February 1991, or

**Comment [A144]:** Subsections a - c are from Rule 321.R.1.c.

Comment [A145]: During the CAC meeting on August 10, a concern about the need to maintain records for 5 years was raised. Staff discovered that EPA had modified its 5 year recordkeeping policy. Hence, per the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies," 2 years record retention is acceptable for sources not subject to Title V permitting or a MACT standard.

**Comment [A146]:** EPA recommended **daily recordkeeping** for non-complying coatings.

**Comment [A147]:** EPA recommended referring to SC Method 313 for determining ROC content of materials containing < 50 g/l.

the South Coast Air Quality Management District Method 25.3, "Determination of Low Concentration Non-Methane Non-Ethane Organic Compound Emissions from Clean Fueled Combustion Sources," March 2000, as applicable. Environmental Protection Agency Test Method 18 or Air Resources Board Method 422, "Exempt Halogenated VOCs in Gases," September 12, 1990, shall be used to determine emissions of exempt compounds. or a method determined to be equivalent and approved by the Control Officer, ARB, and EPA.

- **Comment [A148]:** These changes follow EPA's recommendation that the District model the provisions on SC Rule 1122(h)(7)(B) text.
- 3. Compliance with Section D.3.b The capture efficiency for reactive organic compound emissions shall be based on EPA Guidelines for Developing Capture Efficiency Protocols from 55 FR 26865, July 1, 1990determined by verifying the use of a Permanent Total Enclosure and 100 percent capture efficiency as defined by Environmental Protection Agency Method 204, "Criteria for and Verification of a Permanent or Temporary Total Enclosure." Alternatively, if an Environmental Protection Agency Method 204 defined Permanent Total Enclosure is not employed, capture efficiency shall be determined using a minimum of three sampling runs subject to data quality criteria presented in the Environmental Protection Agency technical guidance document "Guidelines for Determining Capture Efficiency, January 9, 1995." Individual capture efficiency test runs subject to the Environmental Protection Agency technical guidelines shall be determined by:
  - a. The Temporary Total Enclosure approach of Environmental Protection Agency Methods 204 through 204F; or
  - b. The South Coast Air Quality Management District "Protocol for Determination of Volatile Organic Compounds (VOC) Capture Efficiency," May 1995-
- Compliance with Section E.8-Application equipment coating transfer efficiencies shall be determined measured using South Coast Air Quality Management District Method "Spray Equipment Transfer Efficiency Test Procedure of Equipment User," May 24, 1989.
- 5. Compliance with Section D.2-Reactive organic compound composite partial pressures shall be determined measured using ASTM D 2879-861997, "Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope," ASTM International, in combination with the formula in the Section C-Rule 102 definition of "reactive organic compound composite partial pressure," manufacturer's specified vapor reactive organic compound composite partial pressure, or an accepted scientific reference approved the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
- The control device efficiency for toxic air contaminant emissions that are not reactive organic compounds shall be determined using:
  - a. an Environmental Protection Agency approved test method or methods, or
  - in the case where there is no Environmental Protection Agency approved test method, a
     District approved detection method applicable for each target toxics specie.
  - c. the Control Officer may require more than one test method on any emission control device where necessary to demonstrate that the overall efficiency is at least 85.5 percent by weight in reducing emissions of reactive organic compounds and/or toxic air contaminants. Any technique to convert "parts per million by volume" test method results to either 1) "parts per million by weight," or 2) "mass emission rates" (e.g., pounds per hour) shall first be approved by the Control Officer and, if such approval is not provided, then the technique shall not be used to show compliance with this rule.
- The capture efficiency for toxic air contaminant emissions that are not reactive organic compounds shall be determined by using the methods described in Section I.3 modified in a

**Comment [A149]:** EPA recommended that the District model the provisions on SC Rule 1122(h)(7)(A) text.

**Comment [A150]:** Essentially the same as Rule 321.P.4 provisions.

manner approved by the District to quantify the mass of liquid or gaseous reactive organic compounds and/or toxic air contaminants.

The active and passive solvent losses from spray gun cleaning systems shall be determined using South Coast Air Quality Management District's, "General Test Method for Determining Solvent Losses from Spray Gun Cleaning Systems," dated October 3, 1989. The test solvent for this determination shall be any Jacquer thinner with a minimum reactive organic composite

determination shall be any lacquer thinner with a minimum reactive organic compound composite partial pressure of 105 millimeters of mercury at 20 degrees Celsius, and the minimum test temperature shall be 15 degrees Celsius.

- Viscosity shall be determined by ASTM D 1084-88, "Standard Test Methods for Viscosity of Adhesives," ASTM International.
- 10. Solvent waste residue reactive organic compound content shall be determined by using Environmental Protection Agency Reference Method 25D or an equivalent method approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.[Reserved]Emissions of reactive organic compounds from the exhaust of an emission control system shall be measured by the Environmental Protection Agency Method 25, in combination with Environmental Protection Agency Method 18 or the California Air Resources Board Method 422, "Exempt Halogenated VOCs in Gases," September 12, 1990 (to determine emissions of exempt compounds).
- 11. When more than one test method or set of test methods are specified for any testing, a test result showing an exceedance of any limit of this rule shall constitute a rule violation.
- 12. The Environmental Protection Agency test methods in effect on [date of amended rule adoption] shall be the test methods used to meet the requirements of this rule.

J. Requirements – Solvent Cleaning Associated with Surface Coating of Aerospace Vehicles and Components

Section J requirements shall apply to any person performing solvent cleaning associated with surface coating of aerospace vehicles or components, including, but not limited to, use of wipe cleaning cloths, hand-held spray bottles, squirt bottles, aerosol products, and the cleaning of application equipment. The following requirements become effective [one year from the date of amended rule adoption] and are in addition to the general operating requirements specified in Section F.

1. Solvent Requirements

Except when using an emission control system that meets the requirements of Section D.3, no person shall use any solvent to perform solvent cleaning which exceeds the following limits:

- a. When Performing Surface Preparation for Coating Application and Cleanup (Other than Spray Application Equipment Cleaning):
  - 200 grams of reactive organic compound per liter (1.67 pounds of reactive organic compound per gallon) of material, or
  - reactive organic compound composite partial pressure of 45 millimeters of mercury at 20 degrees Celsius.

When Performing Solvent Cleaning of Spray Application Equipment: 25 grams of reactive organic compounds per liter (0.21 pounds of reactive organic compound per gallon) of material. In lieu of meeting the reactive organic compound-content limit, a person may use an enclosed cleaning system, or equipment that is proven to the satisfaction of the Control Officer to be equally effective as an enclosed cleaning system

**Comment [A151]:** Similar to the Rule 321.P.3 requirements.

**Comment [A152]:** Added per the EPA recommendation in the Technical Support Document for SJV Rule 4605 (June 2009).

**Comment [A153]:** Section J stems from similar **solvent cleaning** provisions in Rule 321.M.

**Comment [A154]:** Modeled on SC Rule 1124(c)(1)(A) and SJV Rule 4605.5.2.1.

**Comment [A155]:** ARB and EPA recommended a 25 g/l limit on the solvent's ROC content.

at controlling emissions. "Equal effectiveness" of an alternative cleaning system shall be determined by the test method referenced in Section I.8 of this rule. If an enclosed cleaning system is used, it shall totally enclose spray guns, cups, nozzles, bowls, and other parts during washing, rinsing, and draining procedures, and it shall be used according to the manufacturer's recommendations and be closed when not in use.

- Cleaning Devices and Methods. Except for solvent cleaning of spray application equipment, any person performing solvent cleaning with a solvent containing more than 25 grams of reactive organic compounds per liter of material shall use one or more of the following cleaning devices or methods:
  - a. Wipe cleaning where solvent is dispensed to wipe cleaning materials from containers that are kept closed to prevent evaporation, except while dispensing solvent or replenishing the solvent supply, and where wipes are stored in closed containers to prevent evaporation when not in use;
  - Application of solvent from hand-held spray bottles, squirt bottles, or other closed containers with a capacity of one liter or less; or
  - c. Non-atomized solvent flow, dip, or flush cleaning method where pooling on surfaces being cleaned is prevented or drained, and all solvent runoff is collected in a manner that enables solvent recovery or disposal. The collection system shall be kept closed to prevent evaporation except while collecting solvent runoff or emptying the collection system.

Comment [A156]: Aerospace industry spokespersons indicated that some application equipment cleaning requires with a higher ROC-content solvent. In response, a provision modeled on Rule 321.M.3 is included.

Comment [A157]: Similar to Rule 321.M.2.

#### K. Compliance Schedule

Except as otherwise specified in Section D.1 and Section J, the provisions of this rule are effective on [date of amended rule adoption]. Any person subject to this rule shall comply with the Section J requirements by [one year from the date of amended rule adoption].

Any person who owns, operates, or uses any application equipment to surface coat any aerospace vehicles or components shall meet the following compliance schedule:

- By [30 days from the date of amended rule adoption], comply with Section F, Requirements -General Operating.
- By [six months from the date of amended rule adoption], comply with the recordkeeping provisions in the following Sections:
  - a. H.1.d mixing volumes,
  - H.1.e reactive organic compound content data,
  - c. H.2 purchase records,
  - d. H.3 waste disposal records, and
  - e. H.4 daily records for noncompliant materials.
- By [one year from the date of amended rule adoption], comply with the Section J and Section M requirements.
- 4. By [date of amended rule adoption], comply with all other provisions of this rule.

# L. Reporting Requirements

Submittal of an annual report to the District is required if:

- A person holds a permit for equipment subject to the requirements of this rule, or
   A person is subject to the requirements of this rule and applies non-complying coatings.
- The annual report shall be due March 1 and it shall contain the following information for the previous calendar year:
- monthly records required by Section H.4,
- 2. annual totals (gallons) based on each of the coating's and solvent's monthly data,
- if claiming the Rule 337.B.1 exemption, annual totals (gallons) of non-complying coatings for each separate formulation and all formulations, per Section H.7.b, and
- if permitted, name and address of the company or agency, and the Permit to Operate number that the surface coating equipment is subject to.

#### M. Requirements - Solvent Cleaning Machine

Any person who owns, operates, or uses any solvent cleaning machine shall comply with the applicable provisions of Rule 321, Solvent Cleaning Machines and Solvent Cleaning.

Click here to return to the list of Appendices in the Background Paper.

**Comment [A158]:** The annual report provision was relocated from Section H.4 to a stand-alone section per an Industry suggestion.

Comment [A159]: Added to clarify that Rule 321 provisions apply to solvent cleaning machines when used in conjunction with surface coating of aerospace vehicles and components.

# Appendix F Santa Barbara County Annotated Proposed Amended Rule 349, Polyester Resin Operations

# RULE 349. POLYESTER RESIN OPERATIONS. (Adopted 4/27/1993, revised [date of amended rule adoption])

### A. Applicability

This rule shall apply to <u>any person owning or operating any all-</u>commercial <u>and or industrial polyester resin</u> operations.

# B. Exemptions

- Section D.1, shall not apply to the addition or use of styrene, provided the volume of styrene used is less than 50 gallons per calendar year per stationary source. Any person claiming this exemption shall maintain monthly styrene usage records of the total volume (gallons) of styrene used per calendar year consistent with Sections F.6 and make them available to the District for review upon request. At a minimum, when using compliant materials, the records shall be kept on a monthly basis; and when using noncompliant materials, the records shall be kept on a daily basis.
- This rule shall not apply to any cleaning performed with a solvent (including emulsions) that contains two percent by weight or less of each of the following:
  - a. Reactive organic compounds, and
  - b. Toxic air contaminants (as determined by generic solvent data, solvent manufacturer's composition data or by a gas chromatography test and a mass spectrometry test).
  - c. Any person claiming this exemption shall maintain the records specified in Sections F.1.a and F.1.f in a manner consistent with Section F.7 and make them available for review.
- This rule shall not apply to polyester resin operations performed with polyester resin materials that contain no reactive organic compounds.
- Section H shall not apply to any of the following:
  - a. Cleaning of semiconductor and microelectromechanical devices undergoing manufacturing processes involving thin film deposition, vacuum deposition, dry etching, or metal lift-off operations; including any maintenance activities associated with such operations; and
  - b. Cleaning of electronic components; and
  - Cleaning of encasements, including decoy shells or box casings, for electronic components that have a total surface area that is less than 2 square feet; and
  - Cleaning of parts, subassemblies, or assemblies that are exposed to strong oxidizers or reducers (e.g., nitrogen tetroxide, liquid oxygen, or hydrazine); and
  - e. Cleaning of transparencies, polycarbonate, or glass substrates; and

Comment [A160]: The July 25 draft included a lead-in sentence. Workshop attendees and CAC members indicated on Aug. 10 that the wording was confusing. Hence, staff re-wrote the exemption section for improved clarity.

Comment [A161]: Monthly records will:

1. Substantiate the exemption during the calendar year, and.

2. Alert sources when they are encroaching on the 50 gal/year threshold.

Comment [A162]: The daily recordkeeping provision was added for consistency with the EPA "Guidance Document for Correcting Common VOC & Other Pulc Deficieries"

**Comment [A163]:** Essentially the same as the Rule 321.B.1 exemption.

- Cleaning of solar cells, coated optics, laser hardware, scientific instruments, highprecision optics, telescopes, avionic equipment, microscopes, and military fluid systems;
- g. Cleaning or stripping of coating overspray from personal protective equipment; and
- h. Cleaning of space vehicles.
- 5. Section H shall not apply to polyester resin operations production or rework of the following products, provided the solvents used contain 200 grams of reactive organic compound per liter of material or less or have a reactive organic compound composite partial pressure of 45 millimeter of mercury at 20 degrees Celsius or less:
  - Satellites, satellite components, aerospace vehicles, aerospace vehicle components, aerospace vehicle payloads, or aerospace vehicle payload components.
- 6. Section H shall not apply to polyester resin operations production or rework of products used in any laboratory tests or analyses, including quality assurance or quality control applications, bench scale projects, or short-term (less than 2 years) research and development projects. To qualify for this exemption, the following records shall be maintained:
  - A list of all solvents used, which at a minimum includes the manufacturer's identification and the reactive organic compound content of each solvent.
  - For each short-term research and development project, the project description, date it commenced, and date it concluded.
  - Such records shall be retained in accordance with the provisions of Section F.7.
- Section H shall not apply to cleaning or stripping of polyester resin material from personal
  protective equipment.

# C. Definitions

See Rule 102. Definitions, for definitions not limited to this rule. For the purposes of this Rrule, the following definitions shall apply:

"Aerospace Vehicle or Component" means any fabricated part, processed part, assembly of parts, or completed unit of any aircraft including but not limited to airplanes, helicopters, missiles, rockets, and space vehicles includes satellites.

"Associated Solvent" means any solvent used in a solvent cleaning machine or in-for solvent cleaning operations subject to this rule performed in association with a polyester resin operation.

"Atomized Resin Application" means any resin application technology in which the resin leaves the application equipment and breaks into droplets or an aerosol as it travels from the application equipment to the surface of the part. Atomized resin application includes, but is not limited to, resin spray guns and resin chopper spray guns.

"Bench Scale Project" means a project (other than at a research and development facility) that is operated on a small scale, such as one capable of being located on a laboratory bench top.

1. <u>"Catalyst" is a means any substance added to the resin to initiate polymerization.</u>

2. — "Cleaning Materials" include but are not limited to, materials used for cleaning hands, tools, molds, application equipment, and work area.

**Comment [A164]:** Our protocol is to change the lead-in sentences in this manner.

**Comment [A165]:** Staff revised the definition to avoid confusion when the "associated solvent" is exempt from the rule and to expand the definition to include solvents used in solvent cleaning machines.

"Clear Gel Coat" means any gel coat that is clear or translucent so that underlying colors are visible.

Clear gel coat is used to manufacture parts for sale. Clear gel coat do not include tooling gel coat used to build or repair molds.

"Compliant Material" means any polyester resin material that complies with the 1) applicable monomer content limits in Section D.1.a, D.1.b, or D.1.c, or 2) the D.1.d emission limit of grams per square meter of exposed surface area during resin polymerization; or any solvent that complies with the reactive organic compound content limit in Section H.

3. <u>"Closed Mold System" is a means any</u> method of forming objects from polyester resins by placing the polyester resin material in a confining mold cavity and applying pressure and/or heat.

"Control" means the reduction, by destruction or removal, of the amount of affected pollutants in a gas stream prior to discharge to the atmosphere.

4. — "Control System" includes a control device and a collection system means any combination of pollutant capture system(s) and control device(s) used to reduce discharge to the atmosphere of reactive organic compound or toxic air contaminant emissions generated by a regulated operation.

5. <u>"Cross-Linking" is the means any</u> chemical process of chemically bonding two or more polymer chains together.

**6. ——"Cure"** means to polymerize, i.e., to transform from a liquid to a solid or semi-solid state to achieve desired product physical properties, including hardness.

7. "Fiberglass" is-means a fiber made from glass and similar in appearance to wool or cotton fiber.

"Filler" means any finely divided inert (non-ROC) material that is added to the resin to enhance its mechanical properties and extend its volume. Fillers include, but are not limited to, silica, carbon black, talc, mica and calcium carbonate.

"Fire Retardant Resin" means any polyester resin material used to make products that are resistant to flame or fire.

"Fluid Impingement Technology" means any spray gun that produces an expanding nonmisting curtain of liquid by the impingement of low-pressure uninterrupted liquid streams.

8. <u>"Gel Coat" is means</u> a polyester resin topcoat that provides cosmetic enhancement and improves resistance to degradation from exposure to the environment.

 Grams of ROC per liter of material is the weight of ROC per volume of material and can be ealculated by the following equation:

Comment [A167]: This term has been slightly modified and moved to Rule 102

Comment [A166]: This term is used in Sections

 $\frac{(W_s - W_w - W_{es})}{V_m}$ Where:

W<sub>s</sub> = weight of volatile compounds in grams
W<sub>w</sub> = weight of water in grams

W-<sub>cs</sub> = weight of exempt compounds in grams

V \_\_\_\_ volume of material in liters

- "High-Strength Resin" means any polyester resin material with a casting tensile strength of 10,000 pounds per square inch or more, used to manufacture high performance products.
- 10. **High Volume-Low Pressure** means spray equipment used to apply coatings by means of a high volume of air delivered at pressures between 0.1 and 10 psi air pressure.
- 11. "Inhibitor" is a means any substance used to slow down or prevent a chemical reaction.
- "Lamination Resins" means any orthophthalate, isophthalate and dicyclopentadiene resins used in composite system consisting of layers of reinforcement fibers and resins.
- "Liquid Lenk" means any solvent or polyester resin material leak at a rate of more than three drops perminute or any visible liquid mist.
- 12. Low ROC Emissions Resin Systems are polyester resin materials which contain vapor suppressants to reduce monomer evaporation loss.
- "Maintenance Cleaning" means a solvent cleaning operation or activity carried out to keep clean general work areas where manufacturing or repair activity is performed, to clean tools, machinery, molds, forms, jigs, and equipment. This definition does not include the cleaning of adhesive, coating, or ink application equipment.
- "Marble Resins" means any orthophthalate and modified acrylic isophthalate resins used for the fabrication of cast products.
- "Mold" means any cavity or surface into or on which gel coat, resin, and fibers are placed and from which finished fiberglass parts take their form.
- 43. <u>"Monomer" is an means any</u> organic compound that combines with itself, or other similar compounds to become a cured thermosetting resin (e.g., styrene).
- "Non-Atomized Resin Application" means any application technology in which the resin is not broken into droplets or an aerosol as it travels from the application equipment to the surface of the part. Non-atomized resin application technology includes, but are not limited to, non-atomizing spray guns, flowcoaters, chopper flowcoaters, pressure fed resin rollers, resin impregnators, or fluid impingement technology.
- "Noncompliant Material" means any polyester resin material that does not comply with the 1) applicable monomer content limits in Section D.1.a, D.1.b, or D.1.c, or 2) the D.1.d emission limit of grams per square meter of exposed surface area during resin polymerization; or any solvent that does not comply with the reactive organic compound content limit in Section H.
- "Open Molding Resin and Gel Coat Process" means any process in which the reinforcing fibers and resin are placed in the mold and are open to the surrounding air while the reinforcing fibers are saturated with resin. For the purpose of this rule, open molding includes operations in which a vacuum bag or similar cover is used to compress the uncured laminate to remove bubbles or excess resin, or to achieve a bond between core material and a laminate.
- "Pigmented Gel Coat" means any opaque gel coat used to manufacture parts for sale. Pigmented gel coat does not include tooling gel coat used to build or repair molds.
- 14. —"Polyester" is a complex polymeric ester containing difunctional acids and alcohols dissolved in a monomer.
- 45. —"Polyester Resin Materials" include, but are not limited to, unsaturated polyester resins such as isophthalic, orthophthalic, halogenated, bisphenol-A, vinyl-ester, or furan resins; cross-linking agents;

**Comment [A168]:** Replaced by the term "high volume low pressure spraying equipment" and relocated it to Rule 102.

**Comment [A169]:** The term is no longer used in the rule. Hence, the definition should be deleted.

**Comment [A170]:** Added for ease of understanding that **styrene** is a monomer

**Comment [A171]:** This term is used in Sections 349 B.1. E.4. and E.6.

catalysts, gel coats, inhibitors, accelerators, promoters, and any other ROC reactive organic compound containing materials in polyester resin operations.

<u>16.</u> <u>"Polyester Resin Operations" are-means those</u> methods used for the production or rework of products by mixing, pouring, hand lay-up, impregnating, injecting, forming, winding, spraying, and/or curing unsaturated polyester resin materials with fiberglass, fillers, or any other reinforcement materials and associated <u>cleanup</u> solvent cleaning.

47. — "Polymer" is a means any chemical compound comprised of a large number of chemical units and which is formed by the chemical linking of monomers.

"Primer Gel Coat"—A means any gel coat used to coat the surface of composite parts prior to top-coat painting in the automotive, aerospace, marine and home building industries.

"Reactive Organic Compound" as defined in Rule 102, Definitions

18. —"Repair" is that part of the fabrication process that requires the addition of polyester resin material to portions of a previously fabricated product in order to mend minor structural damage means the process of returning a damaged object or an object not operating properly to good condition.

49. — "Resin" is means any of a class of organic polymers of natural or synthetic origin used in reinforced products to surround and hold fibers, and is solid or semi-solid in the cured state.

"Solid Surface Resins" means any resin used without gel coats to fabricate homogenous solid surface products.

"Solvent" means any liquid containing any reactive organic compound or any toxic air contaminant, which is used as a diluent, thinner, dissolver, viscosity reducer, cleaning agent, drying agent, preservative, or other similar uses.

"Solvent Cleaning" means any activity, operation, or process (including, but not limited to, surface preparation, cleanup, or wipe cleaning) performed outside of a solvent cleaning machine, that uses solvent to remove uncured adhesives, uncured coatings, uncured inks, uncured polyester resin material, uncured sealant, or other contaminants, including, but not limited to, dirt, soil, oil, lubricants, coolants, moisture, fingerprints, and grease, from parts, products, tools, machinery, application equipment, and general work areas. Cleaning spray equipment used for the application of coating, adhesive, ink, polyester resin material, or sealant is also considered to be solvent cleaning irrespective of the spray material being cured.

"Solvent Cleaning Machine" means any device or piece of equipment that uses solvent liquid or vapor to remove soils, moisture, or other contaminants from the surfaces of materials. Types of solvent cleaning machines include, but are not limited to, batch cold, batch vapor, in-line cold, in-line vapor, remote reservoir, and gas-path solvent cleaners. Buckets, pails, and beakers with capacities of 3.785 liters (1.00 gallon) or less are not considered solvent cleaning machines. However, the use of such a container or similar containers (e.g., hand-held spray bottles) with a liquid solvent for cleaning is considered to be solvent cleaning. Any device or piece of equipment used exclusively for stripping shall not be considered to be a solvent cleaning machine.

"Space Vehicle" means any man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes integral equipment such as models, mock-ups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. Also included is auxiliary equipment associated with test, transport, and storage, which through contamination can compromise the space vehicle performance.

"Specialty Gel Coat" means any gel coat which is used in conjunction with fire retardant, corrosion resistant, or high-strength materials.

**Comment [A172]:** Solvent and solvent cleaning are the same definitions found in Rule 321. **Solvent** includes any liquid containing any **toxic air contaminant.** 

Comment [A173]: Solvent, solvent cleaning, and solvent cleaning machine are the same definition found in Rule 321. Solvent includes any liquid containing any toxic air contaminant.

20. —"Specialty Resin" is-means any halogenated, furan, bisphenol A<sub>2</sub> vinyl ester, or isophthalic resin used to make products for exposure to one or more of the following extreme environmental conditions: acute or chronic exposure to corrosive, caustic, acidic, agents, or flame.

"Stationary Source" as defined in Rule 102, Definitions.

"Tooling Resin" means any resins used to build or repair molds (also known as tools) or prototypes (also known as plugs) from which the molds will be made.

"Tooling Gel Coat" means any gel coat used to build or repair molds (also known as tools) or prototypes (also known as plugs) from which the molds will be made.

21. Touch Up is that portion of the fabrication process that is necessary to cover minor imperfections.

"Tub/Shower Resin" means any dicyclopentadiene resin, along with orthophthalate and isophthalate resins, used to fabricate bathware products.

22. "Vapor Suppressant" is a means any substance added to resin to minimize the outward diffusion of monomer vapor into the atmosphere.

23. "Waste Materials" include, but are not limited to any paper or cloth used for cleaning operations, waste resins, and any spent cleaning materials.

# D. Requirements

Process and Control

Any No person shall operating operate a polyester resin operation unless the operation shall comply complies with one or more of the following, as applicable.

- a. Before [24 months after the date of amended rule adoption], Use-use polyester resin material with monomer content of no more than 35 percent by weight as applied and as determined by the manufacturer's specification. This requirement shall not apply to gel coats, provided the monomer content does not exceed 45 percent by weight for pigmented gel coats and does not exceed 50 percent by weight for clear gel coats. On and after [24 months after the date of amended rule adoption], use materials that comply with the limits in Table 349-1; or,
- b. <u>Before [24 months after the date of amended rule adoption], Use use</u> specialty resin with a monomer content of no more than 50 percent by weight as applied and as determined by the manufacturer's specification. On and after [24 months after the date of amended rule adoption], use materials that comply with the limits in Table 349-1; or,
- On and after [24 months after the date of amended rule adoption], use polyester resin
  material that comply with the limits shown in Table 349-1 below when using the open
  molding resin and gel coat process; or

Table 349-1: Monomer Content Limits for Polyester Resin Materials

Polyester Resin Material	As-Applied Monomer Content Limits (Percentage, by Weight)
Clear Gel Coat	
For Marble Resins	<u>40%</u>
All Other Resins	44%

Comment [A174]: The Air Resources Board suggested we lower the monomer content limits and emission limit for vapor suppressed resins. They also suggested we increase the add-on control equipment efficiency to 90%. The District is proposing a 24-month phase-in period for these new requirements.

Polyester Resin Material	As-Applied Monomer Content Limits (Percentage, by Weight)
Pigmented Gel Coat	
White and Off White	30%
Non-White	37%
<u>Primer</u>	<u>28%</u>
Specialty Gel Coat	<u>28%</u>
Tooling Gel Coat	40%
General Purpose Resin	
<u>Lamination Resins</u>	<u>31% or</u>
	35%, as supplied, with no fillers
Marble or Cultured	<u>10% or</u>
Resins	32%, as supplied, with no fillers
Solid Surface Resins	<u>17%</u>
<u>Tub/Shower Resins</u>	<u>24% or</u>
	35%, as supplied, with no fillers
Specialty Resin	
Corrosion Resistant	<u>48%</u>
Resin	
Fire Retardant Resin	<u>38%</u>
<u>High Strength Resin</u>	<u>40%</u>
<u>Tooling Resin</u>	
Atomized (spray)	<u>30%</u>
Non-atomized	<u>39%</u>
All Other Resin	<u>35%</u>

- d. Before [24 months after the date of amended rule adoption], Useuse a resin containing a vapor suppressant, such that the weight loss from ROC reactive organic compound emissions does not exceed 60 grams per square meter of exposed surface area during resin polymerization. On and after [24 months after the date of amended rule adoption], the vapor suppressed resin limit shall be use a resin containing a vapor suppressant, such that the weight loss from reactive organic compound emissions does not exceed 50 grams per square meter of exposed surface area during resin polymerization. The "grams per square meter of exposed surface area during resin polymerization" shall be as-determined by the test method specified in Section E.12; or,
- de. Use a closed mold system; or,
- ef. Install and operate an add-on emission-control system, which is designed and operated in a manner that reduce uncontrolled emissions by at least 85 percent, provided all of the applicable requirements below are met. Any person installing such control system shall obtain an Authority to Construct from the District prior to installation.
  - i. Before [24 months after the date of amended rule adoption], the overall efficiency (the capture efficiency multiplied by the control device efficiency) of the total system shall be at least 85 percent, by weight. On and after [24 months after the date of amended rule adoption] the overall efficiency shall be at least 90 percent, by weight. Alternatively, the control device reactive organic compound exhaust concentration shall not exceed 10 parts per million by volume as propane or other limit approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
  - ii. Combustion temperature shall be continuously monitored when operating a thermal incinerator.

- iii. Inlet and exhaust gas temperatures shall be continuously monitored when operating a catalytic incinerator.
- iv. Control device efficiency shall be continuously monitored when operating a carbon adsorber or a control device other than a thermal or catalytic incinerator.
- Compliance through the use of an emission control system shall not result in
  affected pollutant emissions in excess of the affected pollutant emissions that
  would result from compliance with Sections D.1.a D.1.d or H.

# 2. Spray Application Methods

Any No person operating shall apply a polyester resin operation shall, when applying polyester resin materials by in a spraying operation, unless the application is performed with equipment operating according to the manufacturers operating guidelines. use only In addition, the application method employed shall be one of the following:

a. aAirless, or

b. <u>aAir-assisted airless</u>, <u>or</u>

c. hHigh volume-low pressure spraying equipment, or

d. <u>eElectrostatic spray equipment, or</u>

e. Any other spray application method as approved by the Control Officer, the Air

Resources Board, and the Environmental Protection Agency, and operated in accordance with the manufacturer's recommendations.

# 3. Storage and Disposal General Operating

A person operating a polyester resin operation shall use closed containers to store all polyester resin materials, cleaning materials, and any unused ROC containing materials except when accessed for use. Any person who owns or operates any polyester resin operation equipment or uses any associated solvent subject to this rule shall meet the following requirements:

- a. All polyester resin materials and cleaning materials, used or unused, shall be stored and disposed of in nonabsorbent and nonleaking containers equipped with tight-fitting covers. All covers shall be in place unless adding material to or removing material from the containers, the containers are empty, or doing maintenance/inspection of the containers.

  After distillation recovery of solvent, waste solvent residues shall not contain more than 20 percent of reactive organic compound by weight as determined by the test method specified in Section E.8.
- All application equipment, ventilation system, and emission control equipment shall be installed, operated, and maintained consistent with the manufacturer's specifications.
- c. Waste solvent, waste solvent residues, and any other waste material that contains reactive organic compounds shall be disposed of by one of the following methods: All containers holding polyester resin materials and cleaning materials shall be free of liquid leaks. All application equipment, solvent distillation units, and gun washers shall not have any liquid leaks, visible tears, holes, or cracks. Any such liquid leak, visible tear, hole, or crack is a violation of this rule.

**Comment [A175]:** Subsections i - iv mirror Rule 353.I provisions.

**Comment [A176]:** Similar to Rule 321.N.6. (**Reactive organic compound** changed to **affected pollutant** to include TACs.)

Any liquid leak, visible tear, hole, or crack that is detected shall be repaired within one day from discovery, or the equipment shall be drained of all polyester resin materials or cleaning materials, consistent with Section D.3.a provisions, and shut down until replaced or repaired. Application equipment, solvent distillation units, and gun washers shall not be operated when leaking.

- . A commercial waste solvent reclamation service licensed by the State of California.
- At a facility that is federally or state licensed to treat, store or dispose of such waste.
- Recycling in conformance with Section 25143.2 of the California Health and Safety Code.
- d. All covers, valves, drain plugs, and other closure devices designed to reduce polyester resin material and cleaning material evaporation shall not be removed or opened except to process work or to perform monitoring, inspections, maintenance, or repairs that require the removal of the covers or other closure devices.
- e. Any spills of polyester resin materials or cleaning materials shall be wiped up immediately and the used absorbent material (e.g., cloth, paper, sand, sawdust, etc.) shall be stored in closed containers that are handled in accordance with Section D.3.a.
- f. The handling and transfer of coatings-polyester resin materials and cleaning solvents to or from enclosed systems, vats, waste containers, and other cleaning operation equipment that hold or store fresh or spent coatings and cleaning solvents shall be conducted in such a manner to minimize spills.
- g. Containers used to store eoatingpolyester resin material, solvent, or any waste material that contains reactive organic compounds subject to this rule shall be marked or clearly labeled indicating the name of the material they contain.

# E. <u>Compliance Provisions and Test Methods</u>

- Compliance with Section D.1.a or D.1.b Polyester resin material monomer contents shall be determined measured using ASTM method D2369-8495, "Standard Test Method for Volatile Content of Coatings," ASTM International. Material tested shall be non-catalyzed.
- 2. Compliance with Section D.1.c The weight loss from reactive organic compound emissions shall be determined measured by laboratory static tests, "Static Method for Determination of Volatile Emissions from Polyester and Vinyl Ester Resins," as described in Attachment A.
- 3. Capture efficiency determinations-The capture efficiency for reactive organic compound emissions required in Section D.1.dshall be based on criteria set forth by EPA in 40 CFR 52.741 determined by verifying the use of a Permanent Total Enclosure and 100 percent capture efficiency as defined by Environmental Protection Agency Method 204, "Criteria for and Verification of a Permanent or Temporary Total Enclosure." Alternatively, if an Environmental Protection Agency Method 204 defined Permanent Total Enclosure is not employed, capture efficiency shall be determined using a minimum of three sampling runs subject to data quality criteria presented in the Environmental Protection Agency technical guidance document "Guidelines for Determining Capture Efficiency, January 9, 1995." Individual capture efficiency test runs subject to the Environmental Protection Agency technical guidelines shall be determined by:
  - . The Temporary Total Enclosure approach of Environmental Protection Agency Methods 204 through 204F; or

**Comment [A177]:** The **housekeeping** provisions are similar to requirements found in Rule 321.D.

- The South Coast Air Quality Management District "Protocol for Determination of Volatile Organic Compounds (VOC) Capture Efficiency," May 1995.
- 4. Control efficiency determinations. The control device efficiency for reactive organic compound emissions required in Section D.1.dshall be made using EPA Method 25 or 25A. Gas flow rate measurements in pipes or small ducts shall be made using EPA Method 2A. determined by Environmental Protection Agency Methods 25, 25A, the South Coast Air Quality Management District Method 25.1, "Determination of Total Gaseous Non-Methane Organic Emissions as Carbon," February 1991, or the South Coast Air Quality Management District Method 25.3, "Determination of Low Concentration Non-Methane Non-Ethane Organic Compound Emissions from Clean Fueled Combustion Sources," March 2000, as applicable. Environmental Protection Agency Test Method 18 or Air Resources Board Method 422, "Exempt Halogenated VOCs in Gases," September 12, 1990, shall be used to determine emissions of exempt compounds.
- 5. Solvent reactive organic compound content shall be measured by the Environmental Protection
  Agency Reference Method 24, its constituent methods, or an equivalent method approved by the
  Environmental Protection Agency, the Air Resources Board, and the Control Officer. The
  determination of exempt compounds shall be performed in accordance with ASTM D 4457-1991,
  "Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints
  and Coatings by Direct Injection into a Gas Chromatograph," ASTM International. Alternatively,
  determination of exempt compounds may be performed in accordance with the South Coast Air
  Quality Management District Method 303-91, "Determination of Exempt Compounds," August
  1996. The reactive organic compound content of materials containing 50 grams of reactive
  organic compound per liter or less shall be determined by the South Coast Air Quality
  Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas
  Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the
  Environmental Protection Agency, the Air Resources Board, and the Control Officer!
- 6. The capture efficiency for toxic air contaminant emissions that are not reactive organic compounds shall be determined by using the methods described in Section E.3 modified in a manner approved by the Control Officer to quantify the mass of liquid or gaseous reactive organic compounds and/or toxic air contaminants.
- 7. The control device efficiency for toxic air contaminant emissions that are not reactive organic compounds shall be determined using:
  - a. an Environmental Protection Agency approved test method or methods, or
  - in the case where there is no Environmental Protection Agency approved test method, a
     Control Officer approved detection method applicable for each target toxics specie.
  - c. the Control Officer may require more than one test method on any emission control device where necessary to demonstrate that the overall efficiency is at least 85 percent by weight in reducing emissions of reactive organic compounds and/or toxic air contaminants. Any technique to convert "parts per million by volume" test method results to either 1) "parts per million by weight," or 2) "mass emission rates" (e.g., pounds per hour) shall first be approved by the Control Officer and, if such approval is not provided, then the technique shall not be used to show compliance with this rule.
- Solvent waste residue reactive organic compound content shall be determined by using Environmental Protection Agency Test Method 25D or an equivalent method approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.[Reserved] Emissions of reactive organic compounds from the exhaust of an emission control system shall be measured by the Environmental Protection Agency Method 25, in combination with Environmental Protection Agency Method 18 or the California Air Resources Board Method 422,

**Comment [A178]:** EPA recommended that the District model the provisions on SC Rule 1122(h)(7)(A) text.

**Comment [A179]:** EPA suggested that this provision mirror the SC Rule 1122(h)(7)(B) text.

**Comment [A180]:** EPA recommended referring to SC Method 313 for determining ROC content of materials containing < 50 g/l.

**Comment [A181]:** Similar to the Rule 321.P.3 requirements.

**Comment [A182]:** Essentially the same as Rule 321.P.4 provisions.

"Exempt Halogenated VOCs in Gases," September 12, 1990 (to determine emissions of exempt compounds).

- 9. When more than one test method or set of test methods are specified for any testing, a test result showing an exceedance of any limit of this rule shall constitute a rule violation.
- 10. The Environmental Protection Agency test methods in effect on [date of amended rule adoption] shall be the test methods used to meet the requirements of this rule.

**Comment [A183]:** Added per the EPA recommendation in the Technical Support Document for SJV Rule 4605 (June 2009).

# F. Recordkeeping

Any person subject to this rule shall comply with the following requirements: Any owner or operator of any stationary source comprised of more than one facility may comply with the following requirements on a facility basis.

- A person shall mMaintain a current list file of resins and cleaning all reactive organic compoundcontaining materials in use at the stationary source subject to this rule. which The file shall provides all of the data necessary to evaluate compliance and shall include, including the following information, as applicable:
  - a. the type of resin, catalyst, and cleaning materials used (e.g., brand name, stock identification number)-;
  - b. the weight percent of ROC in each of the polyester resin materials, and the grams of ROC per liter for the cleaning materials of applying polyester resin materials in spraying operations, indicate the spray application method used (e.g., airless, air-assisted airless, etc.):
  - c. for approved vapor suppressed resins, the weight loss (grams per square meter) during resin polymerization, the monomer percentage, and the gel time for each resin-:
  - d. if mixing solvents, specific solvent mixing data (e.g., component volumes or weights) of each component for each batch sufficient to determine the mixture's reactive organic compound content;
  - e. the actual as applied reactive organic compound content of the solvent used and, when not using the a closed mold system, the corresponding monomer content limits from Sections D.1.a, b, or c, and the actual as applied monomer contents; or if complying using a vapor suppressant, the actual as applied polyester or vinyl ester resin weight loss rate of the materials used; and
  - f. current polyester resin material and solvent manufacturer specification sheets. Material

    Safety Data Sheets, product data sheets, or air quality data sheets, which list the reactive
    organic compound content of each material in use at the stationary source subject to this
    rule. Compliance with this provision may be done by ensuring the manufacturer's
    specifications are listed on the product container.
- Maintain records for each reactive organic compound-containing material purchased for use at the stationary source. The records shall include, but not be limited to, the following:
  - a. material name and manufacturer identification (e.g., brand name, stock identification number); and
    - material type (e.g., air dried or baked enamel, powder coating, extreme performance coating polyester resin material type as specified in Table 349-1, cleanup solvent, etc.).

**Comment [A184]:** The District added this in response to an Industry comment received during the Aug. 10, 2011 workshop.

**Comment [A185]:** Our protocol is to specify requirements are on a **stationary source** basis.

**Comment [A186]:** Essentially the same text found in Rule 353.O.1.

**Comment [A187]:** This data is now required by **§F.1.e.** 

**Comment [A188]:** Similar to the recordkeeping provisions in PARs 330, 337, and 353.

**Comment [A189]:** Added in response to a comment by VAFB.

volume of material purchased;

d. date of purchase; and

e. receipts of each purchase.

- 3. Maintain records of the disposal method of disposal each time waste solvent, or waste solvent residue, or other waste material that contain reactive organic compounds is removed from the stationary source for disposal.
- For each material listed in response to Section F.1 a maintain, at a minimum, on a monthly basis
  for compliant material and on a daily basis for noncompliant material, a record of the following:
  - a. volume used (gallons per day, gallons per month);
  - b. polyester resin material as-applied weight percent of monomer or and the cleaning material reactive organic compound content (grams per liter or pounds per gallon); and
  - c. polyester resin material reactive organic compound emission factors (lb/lb or lb/gal); and
  - d. resulting reactive organic compound emissions (pounds per day, pounds per month).

For permitted stationary sources, all records required by this Subsection and Subsection F.1 shall be summarized for each calendar year and submitted to the District by March 1 of the following year. The annual report shall include the name and address of the Permittee, and the Permit to Operate number that the polyester resin operations are subject to (if permitted), and/or a statement that the annual report includes non-compliant polyester resin material usage information.

- 25. Any person using add-on-For any stationary source that uses emission control equipment to meet the requirements of this rule shall maintain daily records of key operating parameters values and maintenance procedures that verify demonstrate that the control equipment was operating properly for each day of operation continuous operation and compliance of the emission control system during periods of emission producing activities shall be maintained. These parameters shall include, but not be limited to:
  - a. Hours of operation;
  - b. All maintenance work that requires the emission control system to be shut down; and
  - c. All information needed to demonstrate continuous compliance with Section D.1.f, such as temperatures, pressures, and/or flow rates.
- 6. Any person claiming an exemption under Section B.1 shall maintain, at a minimum, monthly records for compliant material and daily records for noncompliant material of styrene volumes used in gallons per day and/or gallons per month to support the claim of exemption.
- 37. Such records shall be retained for the previous 24 month period and be available to the District upon request. Any records required to be maintained pursuant to this rule shall be kept on site for at least 2 years unless a longer retention period is otherwise required by state or federal regulation(s). Such records shall be kept on site and be readily available for expeditious inspection and review by the District.
  - If an operator or District staff discovers a liquid leak in a container holding polyester resin material or solvent, or a liquid leak, visible tear, hole, or crack in application equipment, a solvent distillation unit, or in a gun washer, the operator shall record:

**Comment [A190]:** Revised to show "Section F.1.a" to exclude MSDSs per clarification request received during the August 10, 2011 workshop.

Comment [A191]: The daily recordkeeping provision was added for consistency with the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies."

**Comment [A192]:** Moved the annual reporting requirements to Section I per industry suggestion.

**Comment [A193]:** Subsections a - c are from Rule 321.R.1.c.

Comment [A194]: The daily recordkeeping provision was added for consistency with the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies."

Comment [A195]: During the CAC meeting on August 10, a concern about the need to maintain records for 5 years was raised. Staff discovered that EPA had modified its 5 year recordkeeping policy. Hence, per the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies," 2 years record retention is acceptable for sources not subject to Title V permitting or a MACT standard.

- the date of discovery;
- b. the corrective action taken; and
- the date of repair or equipment replacement.

#### G. Compliance Schedule

A person who is subject to the requirements of this determination shall be in compliance by April 27, 1994. Except as otherwise specified, the provisions of this rule are effective on [date of amended rule adoption].

Any person who owns or operates any polyester resin operation equipment subject to this rule shall meet the following compliance schedule:

- By [30 days from the date of amended rule adoption], comply with Section D.3, General Operating.
- By [six months from the date of amended rule adoption], comply with the recordkeeping provisions in the following Sections:
  - a. F.1.d mixing volumes,
  - F.1.e solvent reactive organic compound content data, polyester resin material monomer contents (when not using a closed mold system), and/or actual weight loss rate data (when using a vapor suppressant),
  - F.1.f manufacturer specification sheets, Material Safety Data Sheets, air quality data sheets, or manufacturer specification listings on product container.
  - d. F.2 purchase records,
  - e. F.3 waste disposal records, and
  - F.4 polyester resin material reactive organic compound emission factor records and daily records for noncompliant materials.
- By [12 months from the date of amended rule adoption], comply with the Section H and Section J
  requirements.
- 4. By [24 months from the date of amended rule adoption], comply with any applicable Section D provisions that have a phased-in effective date.
- 5. By [date of amended rule adoption], comply with all other provisions of this rule.

#### H. Requirements – Solvent Cleaning

Section H requirements apply to any person performing solvent cleaning associated with polyester resin operations, including, but not limited to, use of wipe cleaning cloths, hand-held spray bottles, squirt bottles, aerosol products, and the cleaning of application equipment. The following requirements become effective [one year from the date of amended rule adoption] and are in addition to the general operating requirements specified in Section D.3.

Solvent Requirements. Except when using an emission control system that meets the requirements of Section D.1.e, no person shall use any solvent to perform solvent cleaning which exceeds the applicable grams of reactive organic compound per liter of material limit specified in Table 349-2.

**Comment [A196]:** The compliance schedule provision was expanded in response to a request from Industry.

**Comment [A197]:** Section H stems from similar **solvent cleaning** provisions in Rule 321.M.

**Comment [A198]:** Both ARB and EPA recommend a 25 g/l limit on the solvent's ROC content.

Table 349-2: Reactive Organic Compound Content Limits for Solvent Cleaning

SOLVENT CLEANING ACTIVITY	ROC Limit, grams of ROC per liter of material (pounds of ROC per gallon)
(a) Product Cleaning During Manufacturing Process or Surface Preparation for Coating Application	25 (0.21)
(b) Repair and Maintenance Cleaning	2 <u>5</u> (0.21)
(c) Cleaning of Polyester Resin Application Equipment	2 <u>5</u> (0.21)

# I. Reporting Requirements

Submittal of an annual report to the District is required if a person holds a permit for equipment subject to the requirements of this rule. The annual report shall be due March 1 and it shall contain the following information for the previous calendar year:

- monthly records required by Section F.4,
- annual totals (gallons) based on each of the polyester resin materials' and cleaning materials' monthly data.
- if claiming the Rule 349.B.1 exemption, monthly totals of styrene (gallons) used per Section F.6
  and the yearly total amount (gallons) of styrene used, and
- name and address of the company or agency and the Permit to Operate number that the polyester resin operation is subject to.

# J. Requirements - Solvent Cleaning Machine

Any person who owns, operates, or uses any solvent cleaning machine shall comply with the applicable provisions of Rule 321, Solvent Cleaning Machines and Solvent Cleaning.

**Comment [A199]:** The annual report provision was relocated from Section F.5 to a stand-alone section per an Industry suggestion.

**Comment [A200]:** Added to clarify that Rule 321 provisions apply to solvent cleaning machines when used in conjunction with polyester resin operations.

#### ATTACHMENT A

#### STATIC METHOD FOR DETERMINATION OF VOLATILE EMISSIONS FROM

#### POLYESTER AND VINYL ESTER RESINS

#### 1. PURPOSE

- 1.1 This test is designed for the determination of volatile organic compound emissions of polyester and vinyl ester resins as received from the manufacturer, according to requirements of California's South Coast Air Quality Management District (SCAQMD) proposed Rule 1162 amendment published July 17, 1990 Method 309-91, Determination of Static Volatile Emissions, revised February 1993.
- 1.2 This test allows fabricators using polyester and vinyl ester resins to monitor volatile organic compound emissions (principally styrene monomer) from resins used in the fabrication process. The results are to be reported as volatile organic compound losses in grams per square meter (gm/m²).

#### 2. METHOD

The weight of a one gallon can lid filled with 100 gm-grams of resin is accurately measured over a period of time. The measurement is made on resin catalyzed with peroxide initiators to determine weight losses attributed to monomer and other volatile organic compound emissions.

# 3. EQUIPMENT REQUIREMENTS

- 3.1 Controlled environment at 25.0 € degrees Celsius and humidity of 50% R.H percent relative humidity. If controlled environment is not available, report condition under which measurements are made
- 3.2 **Balance** with an accuracy of 0.01 gmgram.
- 3.3 **Draft free enclosure** for balance. This can be achieved by placing the balance in a four sided enclosure that extends a minimum of eight inches above the top of the balance.
- 3.4 Gallon can lid with deep form sufficient to contain 100 gm-grams of resin, having a normal diameter of 14.5 emcentimeters.
- 3.5 Certified or calibrated thermometer capable of measurements accurate to 1 degree Celsius.
- 3.6 **Constant temperature** bath controlled at 25 °C degrees Celsius to adjust resin temperature to 25 °C degrees Celsius.
- 3.7 **Timer** capable of recording time to 0.1 minute.
- 3.8 **Paper clip** bent to approximately 90° degree angle.
- 3.9 **Syringe or pipette** accurate to 0.1 ml-milliliter for peroxide catalyst addition.

**Comment [A201]:** Attachment A changes align the procedures to this text method.

# 4. PROCEDURE

- 4.1 Weigh out 200 gm grams of prepromoted resin into a suitable dry and clean container. Wax cups should not be used for this test.
- 4.2 Cover container and place in constant temperature bath and adjust resin temperature to 25°C degrees Celsius.
- 4.3 Place balance in draft free enclosure.
- 4.4 Clean gallon lid with solvent, wipe dry and air dry and measure diameter to the nearest 0.1 emcentimeter.
- 4.5 Place gallon can lid on an inverted paper or plastic cup mounted on the balance pan. Position bent paper clip in the center of the gallon can lid. Record TARE WEIGHT to 0.01-gmgram.
- 4.6 Take container with resin from water bath and add appropriate volumetric or weight measure of catalyst using syringe or pipette. Start timer. (continued)
- 4.7 Using stirring rod or thermometer, mix in catalyst for one minute.
- 4.8 Pour 100.0 +/- plus or minus 0.5 gm-gram of catalyzed resin into can lid and record weight to +/- plus or minus 0.01 gm-gram. This is the INITIAL WEIGHT.
- 4.9 Using paper clip, determine when resin has hardened sufficiently to allow resin or lid to be lifted or the gel to be torn.
- 4.10 Record this as gel time.
- 4.11 Allow resin to harden in can lid and reweigh every 15 minutes until concurrent weighing agrees to within 0.05 gmgram. Record this as FINAL WEIGHT to +/-plus or minus 0.01 gmgram.
- 4.12 Procedure should be repeated until duplicate samples agree to the nearest 5 gm per m² grams per meter².

#### 5. CALCULATION

5.1 Volatile Organic Compound Emissions per Square Meter

$$\frac{Area of Gallon Can Lid in m^2}{10,000 \text{ cm}^2/\text{m}^2} \equiv \frac{(d/2)^2 \text{ x } 3.14}{10,000 \text{ cm}^2/\text{m}^2}$$

Area of Sample in Square Meter =  $(d/2)^2 * 3.14$ 

Where:  $\underline{d}$  = diameter of the gallon can lid in centimeters (cm)

 $\begin{array}{rcl}
3.14 & = & \text{value of Pi} \\
\underline{\text{cm}^2} & = & \text{square centimeters} \\
\underline{\text{m}^2} & = & \text{square meters}
\end{array}$ 

Volatile Organic Compound Losses<u>. Grams</u> per Square Meter <u>=</u> <u>INITIAL WEIGHT - FINAL WEIGHT</u>

Area of Sample Gallon Can Lid in Square Meters

5.2 Percent Volatile Organic Compound Emission ≡ INITIAL WEIGHT - FINAL WEIGHT x 100 INITIAL WEIGHT - TARE WEIGHT

## 6. REPORTING REQUIREMENTS

- 6.1 Ambient temperature and humidity.
- 6.2 Resin identification and batch number.
- 6.3 Initiator system and amounts used.
- 6.4 Volatile organic compound losses as grams per square meter.
- 6.5 Percent volatile organic compound emission.
- 6.6 Gel time under conditions of test.

THIS PAGE INTENTIONALLY LEFT BLANK

#### Appendix G Santa Barbara County Annotated Proposed Amended Rule 353, Adhesives and Sealants

# RULE 353 ADHESIVES AND SEALANTS. (Adopted 8/19/1999, revised [date of amended rule adoption])

## A. Applicability

This rule is applicable to any person who supplies, sells, offers for sale, <u>distributes</u>, <u>or</u> manufactures; <u>solicits the application of any adhesive product or sealant product for use within the District, as well as to any person who, or uses, applies, or solicits the use or application of any adhesives <u>product</u>, <u>adhesive bonding primers</u>, adhesive <u>primers</u>, sealants <u>product</u>, <u>sealant primers</u>, or any other <u>primersor associated solvent within the District</u>, <u>unless otherwise specifically exempted by this rule</u>.</u>

#### B. Exemptions

- 1. The provisions of this rule shall not apply to the following:
- a1. This rule shall not apply to Aadhesives and associated solvents used in tire repair operations, provided a label on the adhesive used states "For Tire Repair Only."
- b2. This rule shall not apply to Aadhesives and associated solvents used in the assembly and manufacturing of undersea-based weapon systems.
- e3. Provisions of Sections D, E, G.1, and H, shall not apply to any Aadhesives products, adhesive bonding primers, adhesive primers, sealants, sealant-primers products, and any associated solventor any other primers being tested or evaluated used in any laboratory tests or analyses, including quality assurance or quality control applications, bench scale projects, or short-term (less than 2 years) research and development projects, quality assurance, or analytical laboratory, To qualify for this exemption, provided that the following records shall be are maintained and made available to District personnel for a period of at least five (5) years:
  - 1)a. A list of all such materials used, which at a minimum includes the manufacturer's identification, the product category of the material or type of application, and the reactive organic compound content of each material.
  - 2)b. For each short-term research and development project, the project description, date it commenced, and date it concluded.
  - Such records shall be retained in accordance with the provisions of Section O.46 of this
- 44. This rule shall not apply to \$\sigma\_{\text{s}}\text{olvent} welding operations and associated cleaning solvents used in the manufacturing of medical devices, such as, but not limited to, catheters, heart valves, blood cardioplegia machines, tracheotomy tubes, blood oxygenators, and cardiatory reservoirs.
- e. Plaque laminating operations where adhesives are used to bond a clear, polyester acetate laminate to wood with lamination equipment installed prior to July 1, 1992. Any person seeking to claim this exemption shall notify the Control Officer in writing that a complying adhesive is not

**Comment [A202]:** Adding or associated solvent extends the applicability to solvent cleaning. This change stems from a commitment in the 2010 Clean Air Plan.

Comment [A203]: The July 25 draft included a lead-in sentence. Workshop attendees and CAC members indicated on Aug. 10 that the wording was confusing. Hence, staff re-wrote the exemption section for improved clarity.

Comment [A204]: [Reserved.]

**Comment [A205]:** Modeled on the Rule 321.B.8.b exemption.

**Comment [A206]:** Substantiates that R&D projects are short-term.

#### available.

- f5. This rule shall not apply to Agdhesives product and, adhesive bonding primers, adhesive primers, sealant-primers product, or any other primers coating operations and associated solvent use regulated by either of that are subject to any of the following District rules, provided the rule has been approved as part of the State Implementation Plan by the Environmental Protection Agency.
  - <u>4)a.</u> Rule 337, Surface Coating of Aircraft or Aerospace Vehicles Parts and Products Components.
  - 2)b. Rule 354, Graphic Arts.
- g6. This rule shall not apply to Aadhesives products and, adhesive bonding primers, adhesive primers, sealants, scalant primers products, or any other primers that contain less than 20 grams of reactive organic compound per liter (0.17 pounds of reactive organic compound per gallon) of adhesive or sealant, less water and less exempt compounds, as applied. Solvents used in association with adhesive products and/or sealant products exempt by this provision are also exempt from the requirements of Sections G.1 and H.
- <u>h7.</u> <u>This Except for Section J, the rule shall not apply to Cc</u>yanoacrylate adhesives.
- i8. Except as otherwise specified in Section B.10.c, this rule shall not apply to Aadhesives products and, adhesive bonding primers, adhesive primers, sealant, sealant primers products, or any other primers, which are sold or supplied by the manufacturer or suppliers in containers of 16 fluid ounces or less.
- The provisions of this rule, eExcept for Sections I. K. (Prohibition of Sales) I., M. O.3, and O.6, this rule shall not apply if the to any stationary source that has total reactive organic compound emissions less than 200 pounds per calendar year from adhesive products, adhesive bonding primers, adhesive primers, sealant products, associated solvents, and strippers sealant primers, or any other primers, applied at the stationary source are less than 200 pounds per calendar year. Associated solvents and strippers used for operations that are exempt per Sections B.1 B.4, B.11, and B.13 shall not be included in calculating the total reactive organic compound emissions under this exemption. Any person claiming this exemption shall record and maintain monthly operational and emission records that can substantiate this claimdocument compliance. At a minimum, when using compliant materials, the records shall be kept on a monthly basis; and when using noncompliant materials, the records shall be kept on a daily basis. Further, the records shall be made available to District personnel for a period of at least five (5) years. All Such records kept to substantiate the exemption claim shall be retained in accordance with the provisions of Section O.6.

Comment [A207]: The daily recordkeeping provision was added for consistency with the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies"

- 310. The sales prohibition in Sections K.1 and K.2 of this rule shall not apply to:
  - Any supplier or seller of any adhesive <u>product</u> (including aerosol adhesive), <u>adhesive</u> <u>bonding primer, adhesive primer, sealant, or</u> sealant <u>primer product</u>, or any other primer
     where the supplier or seller:
    - Ships the product outside of Santa Barbara County for use outside of Santa Barbara County.
    - Provides product to a user who has installed a District permitted reactive organic compound add-on control device.
  - Any manufacturer of any adhesive <u>product</u> (including aerosol adhesive) <u>or adhesive</u> <u>bonding primer, adhesive primer, sealant, sealant primer product</u> or any other primer, if

the manufacturer has provided the maximum volatile organic compound content per Section L of this rule and if:

- The product was not sold directly to a user or a sales outlet located in Santa Barbara County, or
- The product was sold to an independent distributor that is not a subsidiary of, or under the direct control of, the manufacturer.
- c. The sale of any adhesive <u>product</u> (including aerosol adhesive) <u>or, adhesive bonding primer, adhesive primer, sealant, sealant <u>primer product</u>, or any other primer, except plastic cement welding adhesives, if:</u>
  - The product is sold in any container(s) having a capacity of 16 fluid ounces or less (net volume) or one pound or less (net weight); and
  - 2) The total net weight or volume of two or more containers packaged together must be equal to or less than one pound or 16 fluid ounces, respectively, to qualify for this exemption.
- 11. This rule shall not apply to any cleaning performed with a solvent (including emulsions) that contains two percent by weight or less of each of the following:
  - a. Reactive organic compounds, and
  - Toxic air contaminants (as determined by generic solvent data, solvent manufacturer's composition data or by a gas chromatography test and a mass spectrometry test).
  - Any person claiming this exemption shall maintain the records specified in Sections
     O.1.a and O.1.f in a manner consistent with Section O.6 and make them available for review.
- 12. This rule shall not apply to adhesive products (including aerosol adhesives) and sealant products subject to the Air Resources Board consumer products regulation found in Title 17 of the California Code of Regulations, section 94507 et seq.
- 13. Provisions of Sections G.1, H, and R shall not apply to solvents and strippers used on any of the following:
  - Solar cells, laser hardware, scientific instruments, high-precision optics, telescopes, microscopes, avionic equipment, and military fluid systems; and
  - Cotton swabs when removing cottonseed oil before the cleaning of high-precision optics;
  - eb. Paper gaskets; and
  - dc. Clutch assemblies where rubber is bonded to metal by means of an adhesive; and
  - Cleaning of semiconductor and microelectromechanical devices undergoing manufacturing processes involving thin film deposition, vacuum deposition, dry etching, or metal lift-off operations; including any maintenance activities associated with such operations; and
  - e. Electronic components; and

**Comment [A208]:** Essentially the same as the Rule 321.B.1 exemption.

**Comment [A209]:** Modeled on exemptions found in South Coast AQMD (SC) Rule 1168(j)(13) and SJV Rule 4653.4.1.7.

**Comment [A210]:** Relocated to "i" below for consistency with other rules.

- Cleaning of encasements, including decoy shells or box casings, for electronic components that have a total surface area that is less than 2 square feet; and
- g. Parts, subassemblies, or assemblies that are exposed to strong oxidizers or reducers (e.g., nitrogen tetroxide, liquid oxygen, or hydrazine); and
- h. Transparencies, polycarbonate, or glass substrates; and
- Solar cells, coated optics, laser hardware, scientific instruments, high-precision optics, telescopes, microscopes, avionic equipment, and military fluid systems; and
- Personal protective equipment.

#### C. Definitions

See Rule 102, Definitions, for definitions not limited to this rule. For purposes of this rule, the following definitions shall apply:

- "Acrylonitrile-Butadiene-Styrene (ABS) Welding Adhesive" means any adhesive intended by the manufacturer to weld ABS pipe. ABS pipe is made by reacting monomers of acrylonitrile, butadiene, and styrene and is normally identified with an ABS marking.
- "Adhesive" means any substance that is used to bond one surface to another surface by attachment or fused union
- "Adhesive Primer" means any product intended by the manufacturer to be applied to a substrate, prior to the application of an adhesive, to provide a bonding surface.
- "Adhesive Bonding Primer" means an adhesive applied to a surface to improve the bond of subsequent adhesives and sometimes to inhibit corrosion.
- "Adhesive Primer for Plastic" means a material applied to a plastic substrate before applying an adhesive in order to obtain better adhesion.
- "Adhesive Product" means any adhesive, glue, cement, mastic, adhesive bonding primer, adhesive primer, adhesive primer for plastics, and any other adhesive primer. Adhesive products are a type of coating.
- "Adhesive Solid" means the nonvolatile portion of an adhesive that remains after heating a sample of the material at 110° degrees C-Celsius for one hour.
- "Aerosol Adhesive" means an adhesive packaged as an aerosol product in which the spray mechanism is permanently housed in a nonrefillable can designed for hand-held application without the need for ancillary hoses or spray equipment. "Aerosol adhesives" include "special purpose spray adhesives," "mist spray adhesives," and "web spray adhesives" as defined in the Air Resources Board consumer products regulation found in Title 17 of the California Code of Regulations, section 94507 et seq.
- "Airless Spray" means a spray method in which a pump forces the adhesive through an atomizing nozzle at high pressure (1,000 to 6,000 pounds per square inch).
- "Any Other Primer" means a coating or adhesive applied to a substrate to improve adhesion of subsequently applied adhesive, except adhesive primer and adhesive bonding primer.
- "Architectural Sealant/Primer" means any sealant or sealant primer intended by the manufacturer to be applied to stationary structures, including mobile homes, and their appurtenances. Appurtenances to an architectural structure include, but are not limited to: hand railings, cabinets, bathroom and kitchen fixtures, fences, rain gutters and downspouts, and windows.

**Comment [A211]:** Our protocol is to add this lead-in sentence

Comment [A212]: Term not used in PAR 353.

Comment [A213]: Modeled on the SJV Rule 4653 definition. Existing text in the rule is simplified by using the adhesive product and sealant product terms.

**Comment [A214]:** The District protocol is to remove degree symbols, abbreviations, and acronyms. Hence, they are spelled out here and elsewhere.

**Comment [A215]:** Modeled on the SJV Rule 4653 definition; it is used in Section Q.11.

- "Associated Solvent" means any solvent used in a solvent cleaning machine or infor solvent cleaning operations subject to this rule performed in association with the application of any adhesive product or sealant product.
- "Automotive Glass Adhesive Primer" means any adhesive primer intended by the manufacturer to be applied to automotive glass prior to installation with an adhesive/sealant. This primer improves adhesion to the pinch weld and blocks ultraviolet light.
- "Bench Scale Project" means a project (other than at a research and development facility) that is operated on a small scale, such as one capable of being located on a laboratory bench top.
- "Ceramic Tile Installation Adhesive" means any adhesive intended by the manufacturer for the installation of ceramic tiles.
- "Ceramic Tile" means a ceramic surfacing unit made from clay or a mixture of clay and other materials.
- "Chlorinated Polyvinyl Chloride (CPVC) Welding Adhesive" means any adhesive intended by the manufacturer for the welding of CPVC plastic pipe. CPVC plastic is a polymer of the monomer that contains 67 percent chlorine and is normally identified with a CPVC marking.
- "Coating" means a material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. Such materials include, but are not limited to, adhesive products, paints, varnishes, sealant products, and stains.
- "Compliant Material" means any adhesive product, sealant product, stripper, or solvent that has a reactive organic compound content or composite partial pressure that complies with the applicable limit in Section D. F. F. G. H. or R.
- "Computer Diskette Jacket Manufacturing Adhesive" means any adhesive intended by the manufacturer to glue the fold-over flaps to the body of a vinyl computer diskette jacket.
- "Contact Bond Adhesive" or "Contact Adhesive" means any adhesive intended by the manufacturer to adhere to itself instantaneously upon contact. The adhesive is applied to both adherends and allowed to become dry, which develops a bond when the adherends are brought together without sustained pressure. for application to both surfaces to be bonded together, which is allowed to dry before the two surfaces are placed in contact with each other, forms an immediate bond that is impossible, or difficult, to reposition after both adhesive-coated surfaces are placed in contact with each other, and does not need sustained pressure or clamping of surfaces after the adhesive-coated surfaces have been brought together using sufficient momentary pressure to establish full contact between both surfaces. Contact adhesive does not include rubber cements that are primarily intended for use on paper substrates. Contact adhesive also does not include vulcanizing fluids that are designed and labeled for tire repair only.
- "Contact Bond Adhesive-Specialty Substrates" or "Specialty Contact Adhesive" means any contact adhesive that is intended by the manufacturer to be used for the bonding of nonporous substrates to each other, the bonding of decorative laminate in post-forming application, or for the bonding of decorative laminate to metal, melamine-covered board, or curved surfaces, or when used to bond the bonding of any substrate to metal, rubber, rigid plastic, or wood veneer not exceeding 1/16 inch in thickness.
- "Control" means the reduction, by destruction or removal, of the amount of affected pollutants in a gas stream prior to discharge to the atmosphere.
- "Control System" means any combination of pollutant capture system(s) and control device(s) used to reduce discharge to the atmosphere of reactive organic compound or toxic air contaminant emissions generated by a regulated operation.

**Comment [A216]:** Staff revised the definition to avoid confusion when the "associated solvent" is exempt from the rule and to expand the definition to include solvents used in solvent cleaning machines.

**Comment [A217]:** Some of the new terms stem from additions to Rule 337.

**Comment [A218]:** Added for ease of understanding that these materials are **coatings**.

**Comment [A219]:** The term appears in the amended Rule 353.B.9 and O.4 provisions.

**Comment [A220]:** Modeled on the SJV Rule 4653 definition. The term **contact adhesive** appears several places (e.g., Rule 353 Q.10).

**Comment [A221]:** Similar to the SJV Rule 4653 definition. Rule 353.Q.10 uses **specialty contact adhesive**.

"Cove Base Installation Adhesive" means any adhesive intended by the manufacturer for the installation of cove base (or wall base), which means is generally made of vinyl or rubber, on a wall or vertical surface at floor level.

"Cyanoacrylate Adhesive" means an adhesive with a cyanoacrylate content of at least 95 percent by weight.

"Detailing or Touch-up Guns" mean any small air spray equipment, including air brushes, that operate at no greater than 5 cubic feet per minute air flow and no greater than 50 pounds per square inch gauge air pressure and are used to coat small products or portions of products.

"Dip Coat Application" means any process in which a substrate is immersed in a solution (or dispersion) containing the coating material, and then withdrawn.

"Drywall Installation" means the installation of gypsum drywall to study or solid surfaces using an adhesive formulated for that purpose.

**"Electrodeposition"** means the application of a coating using a water-based electrochemical bath process. The component being coated is immersed in a bath of the coating. An electric potential is applied between the component and an oppositely charged electrode hanging in the bath. The electric potential causes the ionized coating to be electrically attracted, migrated, and deposited on the component being coated.

"Exempt Compound" means any compound identified as an exception to the definition of "reactive organic compound" in Rule 102-

**"Fiberglass"** means <u>a fiber made</u> <u>fine filaments of from glass and similar in appearance to wool or cotton fiber.</u>

"Flexible Vinyl" means nonrigid polyvinyl chloride plastic with at least five percent, by weight, of plasticizer content. A plasticizer means a material, such as a high boiling point organic solvent, that means is incorporated into an adhesive to increase its flexibility, workability, or distensibility, and may be determined using ASTM Method E260-9196(2006), "Standard Practice for Packed Column Gas Chromatography," ASTM International, or from product formulation data.

**"Flow Coat Application"** means any coating application system, with no air supplied to the nozzle, where paint flows over the part and the excess coating drains back into the collection system.

"Foam" means a rigid or spongy cellular mass with gas bubbles dispersed throughout.

"Glue" means a hard gelatin obtained from hides, tendons, cartilage, bones, etc., of animals. Through general use, the term "glue" is synonymous with the term "adhesive."

"Grams of Reactive Organic Compound (ROC) per Liter of Adhesive or Sealant, Less Water and Less Exempt Compounds" means the weight of reactive organic compound per combined volume of reactive organic compound and adhesive or sealant solids, and can be calculated by the following equation:

Grams of ROC reactive organic compounds

per liter of adhesive or sealant, less

water and less exempt compounds

$$W_s - W_w - W_e$$
 $V_m - V_w - V_e$ 

Where:  $W_s =$ Weight of volatile compounds in grams

 $W_w$  = Weight of water in grams

 $W_e$  = Weight of exempt compounds in grams

 $V_m$  = Volume of material in liters  $V_w$  = Volume of water in liters

 $V_e$  = Volume of exempt compounds in liters

**Comment [A222]:** Use of these have been removed from Section Q. Detailing and touch-up guns are have high transfer efficiency devices.

**Comment [A223]:** Deleted because the definition is being added to Rule 102.

For adhesives or sealants that contain reactive diluents, the reactive organic compound content of the adhesive or sealant is determined after curing. The grams of reactive organic compound per liter of adhesive or sealant shall be calculated by the following equation:

Grams of ROC-reactive organic compounds per liter of adhesive or sealant, less water and less exempt compounds  $W_{rs} - W_{rw} - W_{re}$   $V_{rm} - V_{rw} - V_{re}$ 

Where:  $W_{rs}$  = Weight of volatile compounds not consumed during curing in grams

 $W_{rw}$  = Weight of water not consumed during curing in grams

 $W_{re}$  = Weight of exempt compounds not consumed during curing in grams

 $V_{rm}$  = Volume of material not consumed during curing in liters  $V_{rw}$  = Volume of water not consumed during curing in liters

 $V_{re}$  = Volume of exempt compounds not consumed during curing in liters

"Grams of Reactive Organic Compound Per Liter of Material" means the weight of reactive organic compound per volume of material and can be calculated by the following equation:

 $\frac{W_{s} - W_{w} - W_{e}}{V_{m}}$   $\frac{W_{here:} - W_{s} = \text{weight of volatile compounds in grams}}{W_{w} = \text{weight of water in grams}}$   $\frac{W_{e} = \text{weight of exempt compounds in grams}}{W_{e} = \text{weight of exempt compounds in grams}}$   $\frac{W_{e} = \text{wolume of material in liters}}{V_{m} = \text{volume of material in liters}}$ 

"Hand Application Method" means the application of a surface coating by manually held non-mechanically operated equipment. Such equipment includes paint brush, hand-roller, trowel, spatula, dauber, rag or sponge.

"Indoor Floor Covering Installation Adhesive" means any adhesive intended by the manufacturer for the installation of wood flooring, carpet, resilient tile, vinyl tile, vinyl backed carpet, resilient sheet and roll, or artificial grass. Ceramic tile installation and the installation of perimeter bonded sheet flooring with vinyl backing onto a non-porous substrate, such as flexible vinyl are excluded from this category.

"Laminate" means a product made by bonding together two or more layers of material.

"Liquid Leak" means any coating, stripper, or solvent leak at a rate of more than three drops per minute or any visible liquid mist.

"Low-Solids Adhesive, Sealant, or Primer" means any product that contains 120 grams or less of solids per liter of material.

"Marine Deck Sealant/Sealant Primer" means any sealant or sealant primer intended by the manufacturer to be applied to wooden marine decks.

"Metal to Urethane/Rubber Molding or Casting Adhesive" means any adhesive intended by the manufacturer to bond metal to high density or elastomeric urethane or molded rubber materials, in heater molding or casting processes, to fabricate products such as rollers for computer printers or other paper handling equipment.

**Comment [A224]:** This term has been moved into Rule 102.

**Comment [A225]:** The term is no longer used in the rule. Hence, the definition should be deleted.

August 19, 1999[date of amended rule adoption]

"Multipurpose Construction Adhesive" means any adhesive intended by the manufacturer for the installation or repair of various construction materials, including but not limited to drywall, subfloor, panel, fiberglass reinforced plastic (FRP), ceiling tile, and acoustical tile.

"Noncompliant Material" means any adhesive product, sealant product, stripper, or solvent that has a reactive organic compound content or composite partial pressure that does not comply with the applicable limit in Section D. E. F. G. H. or R.

"Nonmembrane Roof Installation/Repair Adhesive" means any adhesive intended by the manufacturer for the installation or repair of nonmembrane roofs and that means is not intended for the installation of prefabricated single-ply flexible roofing membrane. This category includes plastic or asphalt roof cement, asphalt roof coatings, and cold application cement.

"Outdoor Floor Covering Installation Adhesive" means any adhesive intended by the manufacturer for the installation of floor covering that means is not in an enclosure and means exposed to ambient weather conditions during normal use.

**"Panel Installation"** means the installation of plywood, pre-decorated hardboard (or tileboard), fiberglass reinforced plastic, and similar pre-decorated or non-decorated panels to study or solid surfaces using an adhesive formulated for that purpose.

"Percent Reactive Organic Compound By Weight" means the ratio of the weight of the reactive organic compound to the weight of the material, expressed as a percentage of reactive organic compound by weight. The percent reactive organic compound by weight can be calculated as follows:

$$\frac{\%ROCweightPercent\ reactive\ organic\ compound\ by\ weight}{W} = \left(\frac{W_{\nu}}{W}\right) x100$$

Where:  $W_y$  = weight of ROCs reactive organic compounds in grams W = weight of material in grams

"Perimeter Bonded Sheet Flooring Installation" means the installation of sheet flooring with vinyl backing onto a nonporous substrate using an adhesive design to be applied only to a strip of up to four inches wide around the perimeter of the sheet flooring.

"Plastic Cement Welding Adhesive Primer" means any primer intended by the manufacturer to prepare plastic substrates prior to bonding or welding.

"Plastic Foam" means any foam constructed of plastics.

"Plastics" means various synthetic materials chemically formed by the polymerization of organic (carbon-based) substances. Plastics are usually compounded with modifiers, extenders, and/or reinforcers. They are used to produce pipe, solid sheet, film, or bulk products.

**"Polyurethane Foams"** means plastic foams, as defined in "Whittington's Dictionary of Plastics," page 329, and may be either rigid or flexible.

**"Polyvinyl Chloride (PVC) Plastic"** means a polymer of the chlorinated vinyl monomer that contains 57 percent chlorine and is normally identified with a PVC marking.

"Polyvinyl Chloride (PVC) Welding Adhesive" means any adhesive intended by the manufacturer for the welding of PVC plastic pipe.

**Comment [A226]:** The term appears in the amended Rule 353.B.9 and O.4 provision.

- "Porous Material" means a substance that has tiny openings, often microscopic, in which fluids may be absorbed or discharged. Such materials include but are not limited to wood, paper, corrugated paperboard, and plastic foam.
- "Propellant" means a fluid under pressure that expels the contents of a container when a valve means opened.
- "Reactive Diluent" means a liquid which is a reactive organic compound during application and one in which, through chemical and/or physical reactions, such as polymerization, 20 percent or more of the reactive organic compound becomes an integral part of a finished material.

#### "Reactive Organic Compound" as defined in Rule 102, Definitions.

- "Roadway Sealant" means any sealant intended by the manufacturer to be applied to public streets, highways, and other surfaces, including but not limited to curbs, berms, driveways, and parking lots.
- **"Rubber"** includes any natural or manmade rubber substrate, including but not limited to, styrene-butadiene rubber (SBR), polychloroprene (neoprene), butyl rubber, nitrile rubber, chlorosulfonated polyethylene (CSM), and ethylene propylene diene terpolymer (EPDM).
- "Sealant" means any material with adhesive properties that is formulated primarily to fill, seal, waterproof, or weatherproof gaps or joints between two surfaces. Sealants include caulks.
- "Sealant Primer" means any product intended by the manufacturer to be applied to a substrate, prior to the application of a sealant, to enhance the bonding surface.
- "Sealant Product" means any sealant and sealant primer. Sealant products are a type of coating.
- "Sealant Solid" means the nonvolatile portion of a sealant that remains after heating a sample of the material at 1100 degrees CCelsius for one hour.
- "Sheet-Applied Rubber Installation" means sheet rubber lining applied to the interior walls of stationary tanks and rail cars.
- "Single-Ply Roof Membrane" means single sheets of rubber, normally EPDM (ethylene-propylene diene terpolymer), that are applied in a single layer to a building roof (normally a flat roof).
- "Single-Ply Roof Membrane Adhesive" means any adhesive intended by the manufacturer for the installation or repair of single-ply roof membrane. Installation includes, as a minimum, attaching the edge of the membrane to the edge of the roof and applying flashings to vents, pipes, and ducts that protrude through the membrane. Repair includes gluing the edges of tears together, attaching a patch over a hole, and reapplying flashings to vents, pipes, or ducts installed through the membrane.
- **"Single-Ply Roof Membrane Adhesive Primer"** means any primer intended by the manufacturer to clean and promote adhesion of the single-ply roof membrane seams or splices prior to bonding.
- "Single-Ply Roof Membrane Sealant" means any sealant to be used for the installation or repair of singleply roof membrane to the edge of the roof and applying flashings to vents, pipes, or ducts that protrude through the membrane. Repair includes, but is not limited to gluing the edges of tears together, attaching a patch to a hole, and reapplying flashings to vents, pipes, or ducts installed through the membrane.
- "Solvent" means any liquid containing any reactive organic compound or any toxic air contaminant, which is used as a diluent, thinner, dissolver, viscosity reducer, cleaning agent, drying agent, preservative, or other similar uses.
- "Solvent Bonding" has the same meaning as "solvent welding."

"Solvent Cleaning" means any activity, operation, or process (including, but not limited to, surface preparation, cleanup, or wipe cleaning) performed outside of a solvent cleaning machine, that uses solvent to remove uncured adhesives, uncured coatings, uncured inks, uncured polyester resin material, uncured sealant, or other contaminants, including, but not limited to, dirt, soil, oil, lubricants, coolants, moisture, fingerprints, and grease, from parts, products, tools, machinery, application equipment, and general work areas. Cleaning spray equipment used for the application of coating, adhesive, ink, polyester resin material, or sealant is also considered to be solvent cleaning irrespective of the spray material being cured.

"Solvent Cleaning Machine" means any device or piece of equipment that uses solvent liquid or vapor to remove soils, moisture, or other contaminants from the surfaces of materials. Types of solvent cleaning machines include, but are not limited to, batch cold, batch vapor, in-line cold, in-line vapor, remote reservoir, and gas-path solvent cleaners. Buckets, pails, and beakers with capacities of 3.785 liters (1.00 gallon) or less are not considered solvent cleaning machines. However, the use of such a container or similar containers (e.g., hand-held spray bottles) with a liquid solvent for cleaning is considered to be solvent cleaning. Any device or piece of equipment used exclusively for stripping shall not be considered to be a solvent cleaning machine.

"Solvent Welding" means the softening of the surfaces of two substrates by wetting them with solvents and/or adhesives, and joining them together with a chemical and/or physical reaction(s) to form a fused union

#### "Stationary Source" as defined in Rule 102, Definitions.

"Stripper" means any liquid that is applied to a surface to remove cured or dried coatings such as primers, adhesives (e.g., debonding or unglueing), topcoats, and temporary protective coatings.

"Structural Glazing Adhesive" means any adhesive intended by the manufacturer to adhere glass, ceramic, metal, stone, or composite panels to exterior building frames.

**"Subfloor Installation"** means the installation of subflooring material over floor joists, including the construction of any load bearing joists. Subflooring means covered by a finish surface material.

"Surface Preparation Solvent" means a solvent used in the cleaning of a substrate to remove dirt, oil, and other contaminants (e.g., uncured coatings). This surface cleaning means is typically done prior to the application of primers, adhesives, or sealants.

"Thin Metal Laminating Adhesive" means any adhesive intended by the manufacturer to bond multiple layers of metal to metal or metal to plastic in the production of electronic or magnetic components in which the thickness of the bond line(s) means is less than 0.25 mil (0.00025 inch, 0.00635 millimeter).

"Tire Repair" means the expanding of a hole, tear, fissure, or blemish in a tire casing by grinding or gouging, applying adhesive, and filling the hole or crevice with rubber.

"Tire Retread Adhesive" means any adhesive intended by the manufacturer to be applied to the back of precure tread rubber and to the casing and cushion rubber. It may also be used to seal buffed tire casings to prevent oxidation while the tire means is being prepared for a new tread.

"Traffic Marking Tape" means preformed reflective film intended by the manufacturer to be applied to public streets, highways, and other surfaces, including but not limited to curbs, berms, driveways, and parking lots.

"Traffic Marking Tape Adhesive Primer" means any primer intended by the manufacturer to be applied to surfaces prior to installation of traffic marking tape.

"Viscosity" means the internal friction of a liquid that makes it resistant to flow.

Comment [A227]: Solvent and solvent cleaning are the same definitions found in Rule 321. Solvent includes any liquid containing any toxic air contaminant.

Comment [A228]: Solvent, solvent cleaning, and solvent cleaning machine are the same definitions found in Rule 321. Solvent includes any liquid containing any toxic air contaminant.

"Volatile Organic Compound (VOC)" has the same meaning as "reactive organic compound" as defined in Rule 102, Definitions. Tertiary-butyl acetate (also known as t-butyl acetate or tBAc) shall be considered exempt as a reactive organic compound only for purposes of reactive organic compound emissions limitations or reactive organic compound content requirements and will continue to be a reactive organic compound for purposes of all recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements which apply to reactive organic compounds.

"Waterproof Resorcinol Glue" means a two-part resorcinol-resin-based adhesive designed for applications where the bond line must be resistant to conditions of continuous immersion in fresh or salt water.

"Wood Flooring Installation" means the installation of a wood floor surface, which may be in the form of parquet tiles, planks, or strip-wood.

"Wood Parquet Flooring" means wood flooring in tile form constructed of smaller pieces of wood which are joined together in a pattern by the maker to form the tile.

"Wood Plank Flooring" means solid or laminated wood in plank form.

D. Requirements – Reactive Organic Compound Limits for Specific Applications of Adhesive <u>Products</u>, <u>or Adhesive Bonding Primers</u>, Adhesive <u>Primers</u>, Sealant <u>Products</u>, <u>Sealant Primers</u>, or <u>Any Other</u> <u>Primer</u>

Except as provided in Sections E and I-of this rule, and person shall not apply nonaerosol adhesive products, adhesive bonding primers, adhesive primers, or sealant products, sealant primers, or any other primer that are defined-listed under the Table 353-1 product categories and that have a reactive organic compound content (grams per liter [g/I], less water and less exempt compounds) in excess of the Table 353-1 limits. For low-solids adhesives, sealants, or primers, the reactive organic compound content is based on a g4-grams of reactive organic compound per liter of material basis.

TABLE 353-1. REACTIVE ORGANIC COMPOUND LIMITS FOR SPECIFIC APPLICATIONS

E. Requirements – Reactive Organic Compound Limits for Nonspecific Applications of Adhesive <u>Products, Adhesive Bonding Primers, Adhesive Primers, or Sealant Products, Sealant Primers, or Any Other Primer</u> onto Substrates

Except as provided below and in Section I-of this rule, a no person shall not apply nonaerosol adhesive products, adhesive bonding primers, adhesive primers, or sealant products, sealant primers, or any other primer to a substrate that have a reactive organic compound content (g4grams per liter, less water and less exempt compounds) in excess of the Table 353-2 limits. For low-solids adhesives, sealants, or primers, the reactive organic compound content is based on a g4-grams of reactive organic compound per liter of material basis.

The limit for a nonspecific application onto a substrate where an operator:

**Comment [A232]:** Deleting outdated limits simplifies the table.

- Bonds dissimilar substrates together, is the applicable substrate category with the highest reactive organic compound content.
- Uses an adhesive or sealant listed in Table 353-1, is the limit specified in Table 353-1 for that
  particular product category.

TABLE 353-2. REACTIVE ORGANIC COMPOUND LIMITS FOR NONSPECIFIC APPLICATIONS OF ADHESIVE <u>PRODUCTS</u>, <u>ADHESIVE BONDING PRIMERS</u>, <u>ADHESIVE PRIMERS</u>, <u>AND</u> SEALANT <u>PRODUCTS</u>, <u>SEALANT PRIMERS</u>, OR ANY OTHER PRIMER ONTO SUBSTRATES

	ROC LIMITS (less water and exempt compounds)			
SUBSTRATE/APPLICATION	On and After 08/19/1999		On and After [12 months after the date of amended rule adoption]

# F. Requirements - Aerosol Adhesives Reactive Organic Compound Limit

Except as provided in Section I-of this rule, a-no person shall not-use any aerosol adhesive unless the reactive organic compound content, including the propellant, does not exceed 75 percent by weight complies with the Air Resources Board consumer products regulation found in Title 17 of the California Code of Regulations, section 94507 et seq.

### G. Requirement – Cleanup Solvent and/or Cleanup Method

1. Before [one year from the date of amended rule adoption], Except except as provided in Section I of this rule, no person shall use materials containing reactive organic compound for the removal of uncured adhesive products, adhesive bonding primers, adhesive primers, or uncured sealant products, sealant primers, or any other primer from surfaces, other than spray application equipment, unless the reactive organic compound composite vapor partial pressure of the solvent used is less than 45 millimeters (mm) of mercury (Hg) at 20 degrees (2) Celsius (C).

Effective [one year from the date of amended rule adoption], except as provided in Sections G.2 and I, no person shall use any solvent containing more than 25 grams of reactive organic compound (0.21 pound of reactive organic compound per gallon) per liter of material for the removal of uncured adhesive products or uncured sealant products from surfaces.

- Spray application equipment: <u>Before [one year from the date of amended rule adoption]</u>, <u>Except except</u> as provided in Section I-of this rule, either one of the following shall be used for cleaning, flushing or soaking of filters, flushing lines, pipes, pumps, and other parts of the application equipment:
  - An enclosed cleaning system, or an equivalent cleaning system as determined by the test method referenced in Section N.89 of this rule, or

**Comment [A233]:** Both ARB and EPA recommend a 25 g/l limit on the solvent's ROC content.

b. A solvent with a reactive organic compound content of 70 grams of reactive organic compound per liter (0.6 lb/galpound per gallon) of material or less. Parts containing dried adhesive may be soaked in an organic solvent as long as the reactive organic compound composite vapor partial pressure, excluding water and exempt compounds, of the solvent is 9.5 mm of Hgmillimeters of mercury at 20°C degrees Celsius or less and is kept in a closed container, which shall be closed except when depositing or removing parts or materials from the container.

Effective [one year from the date of amended rule adoption], except as provided in Section I, any person cleaning spray application equipment with a solvent containing more than 25 grams of reactive organic compound per liter (0.21 pound of reactive organic compound per gallon) of material shall use an enclosed cleaning system, or equipment that is proven to the satisfaction of the Control Officer to be equally effective as an enclosed cleaning system at controlling emissions. "Equal effectiveness" of an alternative cleaning system shall be determined by the test method referenced in Section N.8. If an enclosed cleaning system is used, it shall totally enclose spray guns, cups, nozzles, bowls, and other parts during washing, rinsing, and draining procedures, and it shall be used according to the manufacturer's recommendations and be closed when not in use.

#### H. Requirements - Surface Preparation Solvent

Before [one year from the date of amended rule adoption], Except except as provided in Section I of this rule and for single-ply roofing, no person shall use materials containing reactive organic compounds for surface preparation unless the reactive organic compound content of the solvent is 70 grams of reactive organic compound per liter (0.6 lb/galpound per gallon) of material or less. For single-ply roofing surface preparation solvent, the reactive organic compound composite vapor-partial pressure, excluding water and exempt compounds, shall not exceed 45 mm of Hg at 20°C millimeters of mercury at 20 degrees Celsius.

Effective [one year from the date of amended rule adoption], except as provided in Section I-and for single ply roofing, no person shall use any solvent containing more than 25 grams of reactive organic compound per liter (0.21 pound of reactive organic compound per gallon) of material for surface preparation.—For single ply roofing surface preparation solvent, the reactive organic compound composite partial pressure shall not exceed 45 millimeters of mercury at 20 degrees Celsius.

#### I. Requirements – Alternative Compliance Provision

A person may comply-elect to use an add-on control system as an alternative to meeting the requirements with the provisions-of Sections D, E, F, G, and-H, Q, and R of this rule by using approved add on air pollution control equipment, provided thatall of the applicable requirements below are met. Any person choosing to install such control system shall obtain an Authority to Construct from the District prior to installation.

- The reactive organic compound emissions from such operations and/or materials are reduced by at least 85 percent overall capture and destruction efficiency (the capture efficiency multiplied by the control device efficiency) of the total system shall be at least 85.0 percent, by weight.

  Alternatively, the control device reactive organic compound exhaust concentration shall not exceed 10 parts per million by volume as propane or other limit approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
- Combustion temperature is shall be continuously monitored when operating a thermal incinerator.
- Inlet and exhaust gas temperatures are shall be continuously monitored when operating a catalytic incinerator.
- Control device efficiency is shall be continuously monitored when operating a carbon adsorber or control device other than a thermal or catalytic incinerator.

**Comment [A234]:** Modeled on the Rule 321.M.3 provisions.

**Comment [A235]:** Excluding this provision is consistent with the current requirements in SJV 4653 and SC 1171 rules.

**Comment [A236]:** Revising the limit from 70 to 25 g/l follows ARB and EPA suggestions. Similar to Ventura County APCD (VC) Rule 74.20, the single-ply roofing surface preparation requirement remains unchanged.

**Comment [A237]:** The addition of **and toxic air contaminant** stems from similar text in Rule 321.N.1.

Written approval for such equipment, in the form of an Authority to Construct and a Permit to
 Operate, is received from the Control Officer., and Compliance through the use of an emission
 control system shall not result in affected pollutant emissions in excess of the affected pollutant
 emissions that would result from compliance with Sections D, E, F, G, H, Q, and R.

J. Requirements - Storage of Reactive Organic Compound Containing Materials General Operating

Any person who owns, operates, or uses any application equipment to apply any adhesive products or sealant products shall ensure the coating operation and any solvent cleaning associated with such operation meets the following requirements:

- 1. All reactive organic compound-containing materials, used or unused, including, but not limited to, adhesive products, sealant products, and reactive organic compound-laden cloth or paper used in in solvent cleaning and stripping of cured adhesives, shall be stored or and disposed of in non-absorbent and nonleaking containers equipped with tight-fitting covers, which shall be closed except when depositing or removing materials from the container. All covers shall be in place unless adding material to or removing material from the containers, the containers are empty, or doing maintenance/inspection of the containers.

  After distillation recovery of solvent, waste solvent residues shall not contain more than 20 percent of reactive organic compound by weight as determined by the test method specified in Section N.14.
- All application equipment, ventilation system, and emission control equipment shall be installed, operated, and maintained consistent with the manufacturer's specifications.
- Waste solvent, waste solvent residues, and any other waste material that contains reactive organic compounds shall be disposed of by one of the following methods: All containers holding reactive organic compound containing materials shall be free of liquid leaks. All application equipment, solvent distillation units, and gun washers shall not have any liquid leaks, visible tears, holes, or cracks. Any such liquid leak, visible tear, hole, or crack is a violation of this rule.

Any liquid leak, visible tear, hole, or crack that is detected shall be repaired within one day from discovery, or the equipment shall be drained of all surface coating or solvent, consistent with Section J.1 provisions, and shut down until replaced or repaired. Application equipment, solvent distillation units, and gun washers shall not be operated when leaking.

- A commercial waste solvent reclamation service licensed by the State of California.
- b. At a facility that is federally or state licensed to treat, store or dispose of such waste.
- Recycling in conformance with Section 25143.2 of the California Health and Safety Code.
- 4. All covers, valves, drain plugs, and other closure devices designed to reduce evaporation of reactive organic compound-containing materials shall not be removed or opened except to process work or to perform monitoring, inspections, maintenance, or repairs that require the removal of the covers or other closure devices.
- 5. Any reactive organic compound-containing material spills shall be wiped up immediately and the used absorbent material (e.g., cloth, paper, sand, sawdust, etc.) shall be stored in closed containers that are handled in accordance with Section J.1.
- The handling and transfer of coatings, strippers, and cleaning solvents to or from enclosed systems, vats, waste containers, and other cleaning operation equipment that hold or store fresh or spent coatings, strippers, and cleaning solvents shall be conducted in such a manner that minimizes spills.

**Comment [A238]:** Similar to provision in Rule 321.N.6. (**Reactive organic compound** changed to **affected pollutant** to include TACs.)

**Comment [A239]:** The **housekeeping** provisions are similar to requirements found in Rule 321.D.

7. Any storage of any Containers used to store adhesive products, and sealant products, solvent, or any waste material that contains reactive organic compounds subject to this rule shall be marked or clearly labeled indicating the name of the material they contained only only be done in containers that meet the labeling requirements of Section I.

#### K. Requirements – Prohibition of Sales

- Except as provided in Section B. 310 of this rule, after the specified effective dates, no person shall supply, sell, or offer for sale any nonaerosol adhesives product, adhesive bonding primers, adhesive primers, sealants or sealant product, sealant primers, or any other primer that, at the time of sale, is listed in Section D Table 353-1 and exceeds the corresponding reactive organic compound limits therein. listed in Table 353-1 and is defined under a product category in Table 353-1.
- Except as provided in Section B.310 of this rule, no person shall supply, sell, or offer for sale, any
  aerosol adhesive unless, at the time of sale, the reactive organic compound content, including the
  propellant, does not exceed 75 percent by weightprovisions of the Air Resources Board consumer
  product regulation, found in Title 17 of the California Code of Regulations, section 94507 et seq.,
  are met.

## L. Requirements – Manufacturer Compliance Statement and Labeling

The manufacturer of any adhesive <u>products</u>, <u>adhesive bonding primers</u>, <u>adhesive primers</u>, <u>or</u> sealant <u>products</u>; <u>sealant primers</u>, <u>or</u> any other <u>primer</u> subject to this rule shall <u>display the include a designation of the maximum reactive organic compound or volatile organic compound content as supplied, <u>expressed in grams per liter or pounds per gallon excluding water and exempt compounds <u>determined by from</u> the appropriate test method, on labels <u>or containers and data sheets</u>. This designation shall <u>display-include</u> recommendations regarding thinning, reducing, or mixing with any other <u>reactive organic compound-or</u> volatile organic compound—containing material. This information shall include the maximum <u>reactive organic compound or</u> volatile organic compound content on an as-applied basis when used in accordance with the manufacturer's recommendations.</u></u>

#### M. Requirements – Prohibition of Specification

No person shall solicit, require for use, or specify the application of any adhesive <u>products</u>, <u>adhesive</u> <u>bonding primers</u>, adhesive <u>primers</u>, sealant <u>products</u>, <u>or associated solvent sealant primers</u>, or any other <u>primer</u>, if such use or application results in a violation of the provisions of this rule. This prohibition shall apply to all written or oral contracts.

#### N. Monitoring Requirements – Compliance Provisions and Test Methods

- 1. The volatile organic compound and solids content of all nExcept as specified in Section N.4.
  nonaerosol adhesive products, adhesive primerssealant products, and eleaning associated solvents reactive organic compound content, except as specified in Section N.4 of this rule, shall be determined using Environmental Protection Agency Reference Method 24 (40 CFR Part 60, Appendix A), its constituent methods, or an equivalent method approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officeror South Coast Air Quality Management District Method 304. The reactive organic compound content of materials containing 50 grams of reactive organic compound per liter or less shall be determined by the South Coast Air Quality Management District Method 313-91, "Determination of Volatile Organic Compounds by Gas Chromatography-Mass Spectrometry," June 1993, or any other test methods approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer.
- Exempt organic compounds shall be determined using ASTM D4457-1991, "Standard Test
  Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings

**Comment [A240]:** Modeled on the VC Rule 74.20.B.12 provisions.

**Comment [A241]:** EPA recommended referring to SC Method 313 for determining ROC content of materials containing < 50 g/l.

by Direct Injection into a Gas Chromatograph," ASTM International. Alternatively, determination of exempt compounds may be performed in accordance with the South Coast Air Quality Management District Method 303-91, "Determination of Exempt Compounds," August 1996. For exempt compounds where no reference test method is available, a facility requesting the exemption shall provide appropriate test methods approved by the Control Officer and approvable by the Air Resources Board and the Environmental Protection Agency.

- 3. The <u>volatile reactive</u> organic compound content of aerosol adhesives and aerosol adhesive primers shall be determined using South Coast <u>Air Quality Management District</u> Test Method 305-91, "<u>Determination of Volatile Organic Compounds in Aerosol Applications</u>," <u>June 1993</u>, or Air Resources Board Method 310, "<u>Determination of Volatile Organic Compounds in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products</u>," <u>June 22, 2000</u>, upon the Environmental Protection Agency approval of Method 310.
- The volatile reactive organic compound content of any plastic welding cement adhesive or primer shall be determined using South Coast Air Quality Management District Method 316A-92, "Determination of Volatile Organic Compound (VOC) in Materials Used for Pipes and Fittings," October 1996.
- 5. The composite vapor pressure of organic compounds in cleaning materials shall be determined by quantifying the amount of each compound in the blend using gas chromatographic analysis (ASTM E260 96) for organics and ASTM D3792 91 for water content, as applicable, and the following equation:

Comment [A242]: Replaced by reactive organic compound composite partial pressure (Rule 102).

$$P_{P_C} = \frac{\sum_{i=1}^{n} (W_i)(VP_i)/Mw_i}{W_w/Mw_w + \sum_{i=1}^{n} W_e/Mw_e + \sum_{i=1}^{n} W_i/Mw_i}$$

Where:

 $Pp_e$  = VOC composite partial pressure at 20°C, in mm Hg.

W<sub>e</sub> = Weight of the "i"th VOC compound, in grams, as determined by ASTM E260-96.

Ww = Weight of water, in grams as determined by ASTM D3792-91

W<sub>e</sub> = Weight of the "i"th exempt compound, in grams, as determined by ASTM E260-96.

Mw. = Molecular weight of the "i" th VOC compound, in grams per grams mole, as given in chemical reference literature.

 $Mw_{**}$  = Molecular weight of water, 18 grams per g mole.

MW<sub>e</sub> = Molecular weight of the "i"th exempt compound, in grams per g mole, as given in chemical reference literature.

VP<sub>r</sub> = Vapor pressure of the "i"th VOC compound at 20°C, in mm Hg, as determined by Section N.6 of this Rule.

5. Reactive organic compound composite partial pressures shall be measured using ASTM D 2879-1997, "Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope," ASTM International, in combination with the formula in the Section C Rule 102 definition of "reactive organic compound composite partial pressure," manufacturer's specified reactive organic compound composite partial pressure, or an accepted scientific reference approved the Environmental Protection Agency, the Air Resources Board, and the Control Officer.

- 6. The vapor pressure of each single component compound may be determined from ASTM D2879-96 or may be obtained from a published source approved by the Control Officer, such as the sources referenced in 40 CFR-52.741, or the most current edition of a published source, including, but not limited to: a). The Vapor Pressure of Pure Substances, Boublik, Fried, and Hala; Elsevier Scientific Publishing Company, New York; b). Perry's Chemical Engineer's Handbook, McGraw-Hill Book Company; c). CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company; and d) Lange's Handbook of Chemistry, John Dean, editor, McGraw-Hill Book Company.
- The measurement of capture efficiency for reactive organic compound emissions of an emission control system-shall be conducted and reported in accordance with the recently approved Environmental Protection Agency Technical Document "Guidelines for Determining Capture Efficiency," issued January 9, 1995, or a District capture efficiency determination method approved by the Environmental Protection Agency determined by verifying the use of a Permanent Total Enclosure and 100 percent capture efficiency as defined by Environmental Protection Agency Method 204, "Criteria for and Verification of a Permanent or Temporary Total Enclosure." Alternatively, if an Environmental Protection Agency Method 204 defined Permanent Total Enclosure is not employed, capture efficiency shall be determined using a minimum of three sampling runs subject to data quality criteria presented in the Environmental Protection Agency technical guidance document "Guidelines for Determining Capture Efficiency, January 9, 1995." Individual capture efficiency test runs subject to the Environmental Protection Agency technical guidelines shall be determined by:
  - a. The Temporary Total Enclosure approach of Environmental Protection Agency Methods 204 through 204F; or
  - The South Coast Air Quality Management District "Protocol for Determination of Volatile Organic Compounds (VOC) Capture Efficiency," May 1995
- 87. The measurement of control device efficiency for reactive organic compound emissions shall be in accordance with determined by Environmental Protection Agency Methods 25, 25A, 25B, or the South Coast Air Quality Management District Method 25.1, "Determination of Total Gaseous Non-Methane Organic Emissions as Carbon," February 1991, or the South Coast Air Quality Management District Method 25.3, "Determination of Low Concentration Non-Methane Non-Ethane Organic Compound Emissions from Clean Fueled Combustion Sources," March 2000, as applicable. Environmental Protection Agency Test Method 18 or Air Resources Board Method 100.422, "Exempt Halogenated VOCs in Gases," September 12, 1990, shall be used to determine emissions of exempt compounds.
- 98. The active and passive solvent losses from spray gun cleaning systems shall be determined using South Coast Air Quality Management District's, "General Test Method for Determining Solvent Losses from Spray Gun Cleaning Systems," dated October 3, 1989. The test solvent for this determination shall be any lacquer thinner with a minimum vapor reactive organic compound composite partial pressure of 105 mm of Hgmillimeters of mercury at 20°C degrees Celsius, and the minimum test temperature shall be 15°C degrees Celsius.
- 409. To determine if a diluent is a reactive diluent, the percent of the reactive organic compound that becomes an integral part of the finished material shall be determined using the South Coast Air Quality Management District Method 316A-92, "Determination of Volatile Organic Compound (VOC) in Materials Used for Pipes and Fittings," October 1996.
- Application equipment coating transfer efficiencies shall be measured using South Coast Air
   Quality Management District Method "Spray Equipment Transfer Efficiency Test Procedure of Equipment User," May 1989.

**Comment [A243]:** EPA recommended that the District model the provisions on SC Rule 1122(h)(7)(A) text.

**Comment [A244]:** These changes follow EPA's recommendation that the District model the provisions on SC Rule 1122(h)(7)(B) text.

- 11. The capture efficiency requirement for toxic air contaminant emissions that are not reactive organic compounds shall be determined by using the methods described in Section N.6 modified in a manner approved by the District to quantify the mass of liquid or gaseous reactive organic compounds and/or toxic air contaminants.
- **Comment [A245]:** Similar to the Rule 321.P.3 requirements.
- 12. The control device efficiency requirement for toxic air contaminant emissions that are not reactive organic compounds shall be determined using:
  - a. an Environmental Protection Agency approved test method or methods, or
  - in the case where there is no Environmental Protection Agency approved test method, a
     District approved detection method applicable for each target toxics specie.
  - c. the Control Officer may require more than one test method on any emission control device where necessary to demonstrate that the overall efficiency is at least 85 percent by weight in reducing emissions of reactive organic compounds and/or toxic air contaminants. Any technique to convert "parts per million by volume" test method results to either 1) "parts per million by weight," or 2) "mass emission rates" (e.g., pounds per hour) shall first be approved by the Control Officer and, if such approval is not provided, then the technique shall not be used to show compliance with this rule.
- Viscosity will be determined by ASTM D 1084-88, "Standard Test Methods for Viscosity of Adhesives," ASTM International.
- 14. Solvent waste residue reactive organic compound content shall be determined by using Environmental Protection Agency Reference Method 25D or an equivalent method approved by the Environmental Protection Agency, the Air Resources Board, and the Control Officer. [Reserved] Emissions of reactive organic compounds from the exhaust of an emission control system shall be measured by the Environmental Protection Agency Method 25, in combination with Environmental Protection Agency Method 18 or the California Air Resources Board Method 422. "Exempt Halogenated VOCs in Gases," September 12, 1990 (to determine emissions of exempt compounds).
- 15. When more than one test method or set of test methods are specified for any testing, a test result showing an exceedance of any limit of this rule shall constitute a rule violation.
- 16. The Environmental Protection Agency test methods in effect on [date of amended rule adoption] shall be the test methods used to meet the requirements of this rule.

Comment [A247]: Added per the EPA recommendation in the Technical Support Document for SJV Rule 4605 (June 2009).

Comment [A246]: Essentially the same as Rule

321.P.4 provisions.

#### O. Requirements – Recordkeeping

Any person subject to this rule that manufactures or applies any adhesive product or, adhesive bonding primer, adhesive primer, scalant product, scalant primer, or any other primer shall comply with the following requirements:. Any owner or operator of any stationary source comprised of more than one facility may comply with the following requirements on a facility basis.

- 1. Maintain a current list file of each all adhesive, adhesive bonding primer, adhesive primer, sealant, sealant primer, any other primer, and solvent reactive organic compound-containing materials in use at the stationary source subject to this ruleand in storage. The file shall provide all of the data necessary to evaluate compliance and shall include, but not be limited to, the following information, as applicable:
  - A data sheet or material list giving the material name, manufacturer identification, and material application (e.g., brand name, stock identification number).
  - b. application method;

**Comment [A248]:** The District added this in response to an Industry comment received during the Aug. 10, 2011 workshop.

August 19, 1999[date of amended rule adoption]

- c. material type, manufacturer's specific use instructions (e.g., catalysts, reducers, or other emponents are added specific use for which the material is intended), type operation (e.g., coating, stripping, or solvent cleaning), and, for coating operations, the product type, type of substrate coated, and type of application (i.e., the adhesive product and sealant product type from Table 353-1 or Table 353-2);
- bd. Any catalysts, reducers, or other components used and the specific mixing ratio data (e.g., component volumes or weights) of each component for each batch sufficient to determine the mixture's reactive organic compound content;
- ee. Tthe applicable corresponding reactive organic compound content limit(s) or vapor pressure limit from Sections D, E, F, G, and H of this rule from Sections D, E, F, G, H, and R and the actual as applied reactive organic compound content of the materials used, as applied, or If complying using the "reactive organic compound vapor-composite partial pressure" method, provide the actual reactive organic compound composite partial pressure of the adhesive, sealant, primer, or solvent materials used.
- f. current adhesive product, sealant product, stripper, and solvent manufacturer
  specification sheets, Material Safety Data Sheets, product data sheets, or air quality data
  sheets, which list the reactive organic compound content of each material in use at the
  stationary source subject to this rule. Compliance with this provision may be done by
  ensuring the manufacturer's specifications are listed on the product container.
- Maintain records for each reactive organic compound-containing material purchased for use at the stationary source. The records shall include, but not be limited to, the following:
  - a. material name and manufacturer identification (e.g., brand name, stock identification number); and
  - b. material type (e.g., adhesive product and sealant product type from Tables 353-1 and 353-2, cleanup solvent, stripper, etc.)
  - c volume of material purchased;
  - d. date of purchase; and
  - e. receipts of each purchase.
- Maintain records of the disposal method of disposal each time waste solvent, or waste solvent residue, or other waste material that contain reactive organic compounds is removed from the stationary source for disposal.
- 24. Maintain records of the monthly volume of each adhesive, adhesive bonding primer, adhesive primer, sealant, sealant primer, other primers, or solvent used. For each material maintained in response to Section O.1.a. maintain, at a minimum, on a monthly basis for compliant material and on a daily basis for noncompliant material, a record of the following:
  - a. volume used (gallons per day, gallons per month);
  - b. reactive organic compound content (grams per liter or pounds per gallon); and
  - c. resulting reactive organic compound emissions (pounds per day, pounds per month).

For permitted facilities and users of non-compliant coatings, all records required by this Subsection and Subsection O.1 shall be summarized for each calendar year and submitted to the **Comment [A249]:** Added in response to a comment by VAFB.

**Comment [A250]:** Revised to show "Section O.1.a" to exclude MSDSs per clarification request received during the August 10, 2011 workshop.

Comment [A251]: The daily recordkeeping provision was added for consistency with the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies."

District by March 1 of the following year. The annual report shall include the name and address of the Permittee, the Permit to Operate number that the coating and solvent cleaning is subject to (if permitted), and/or a statement that the annual report includes non-compliant coating usage information.

- 35. When compliance is achieved through the use of add on For any stationary source that uses emission control equipment, as an alternative to meeting the requirements of Sections D, E, F, G, H, Q, or R, maintain-daily records on a daily basis of key operating parameters values and maintenance procedures that demonstrate continuous operation and compliance of the for the emission control equipment during periods of emission producing activities shall be maintained. These parameters shall, including include, but not be limited to:
  - a. Hours of operation-:
  - Routine and nonroutine maintenance. All maintenance work that requires the emission control system to be shut down;
  - c. The applicable information specified in Section I of this rule. All information needed to demonstrate continuous compliance with Section I, such as temperatures, pressures, and/or flow rates.
  - d. The daily volume of each noncompliant adhesive, sealant, primer, or solvent used.
- 46. All-Any records shall be required to be maintained pursuant to this rule shall be kept on site for at least two (2) years and shall be available for inspection unless a longer retention period is otherwise required by state or federal regulation(s). Such records shall be readily available for Thereafter, the records shall be maintained either on site or readily available for expeditious inspection and review by the District for an additional three (3) years.
- If an operator or District staff discovers a liquid leak in a container holding coating or solvent, or a liquid leak, visible tear, hole, or crack in application equipment, a solvent distillation unit, or in a cun washer, the operator shall record:
  - a. the date of discovery;
  - b. the corrective action taken; and
  - c. the date of repair or equipment replacement.
- P. Rule Effective Date Compliance Schedule

Unless otherwise specified, the provisions of this rule become effective on August 19, 1999[date of amended rule adoption].

Any person subject to this rule shall meet the following compliance schedule:

- By [30 days from the date of amended rule adoption], comply with Section J, Requirements -General Operating.
- By [six months from the date of amended rule adoption], comply with the recordkeeping provisions in the following Sections:
  - a. O.1.d mixing volumes,
  - O.1.e reactive organic compound content data or stripper composite partial pressure data.

**Comment [A252]:** Moved the annual reporting requirements to Section S per industry suggestion.

**Comment [A253]:** Subsection 5 text mirrors the Rule 321.R.1.c provisions.

Comment [A254]: During the CAC meeting on August 10, a concern about the need to maintain records for 5 years was raised. Staff discovered that EPA had modified its 5 year recordkeeping policy. Hence, per the EPA "Guidance Document for Correcting Common VOC & Other Rule Deficiencies," 2 years record retention is acceptable for sources not subject to Title V permitting or a MACT standard.

August 19, 1999[date of amended rule adoption]

- c. O.2 purchase records,
- d. O.3 waste disposal records, and
- e. O.4 daily records for noncompliant materials.
- By [one year from the date of amended rule adoption], comply with the applicable provisions in Sections G and H that have a phased-in effective date.
- By [one year from the date of amended rule adoption], comply with Section Q, R, and T requirements.
- 5. By [date of amended rule adoption], comply with all other provisions of this rule.

#### O. Requirement – Adhesive and Sealant Application Equipment

Effective [one year from the date of amended rule adoption], no person shall apply adhesives or sealants unless the application is performed with equipment operating according to the manufacturers operating guidelines. In addition, except as provided in Section I, the application method employed shall be one of the following:

- 1. Electrostatic spray application, or
- 2. Flow coat application, or
- 3. Dip coat application, or
- 4. Roll Coater, or
- 5. High volume low pressure spraying equipment, or
- 6. Electrodeposition, or
- 7. Hand application methods, or
- 8. Detailing or touch up guns, or
- Any other application method approved by the Control Officer, the Air Resources Board, and the Environmental Protection Agency, that has a coating transfer efficiency equivalent to or greater than the 65 percent efficiency as measured using the test method specified in Section N.10.
- Except as otherwise provided in Section Q.1.40, air-atomized spray may only be used for the application of contact adhesives or specialty contact adhesives.
- 44-10. For adhesive products and sealant products with an as applied viscosity of 200 centipoise or greater, airless spray, air-assisted airless, and air-atomized spray may be used.

#### R. Requirements – Coating Stripper Use

Effective [one year from the date of amended rule adoption], except as provided in Section I, no person shall apply any stripper or solicit the use of any stripper unless it complies with one or both of the followine:

 The stripper contains less than 300 grams of reactive organic compound per liter (2.5 pounds of reactive organic compound per gallon) of material. **Comment [A255]:** The compliance schedule provision was expanded in response to a request from Industry.

**Comment [A256]:** Section Q was modeled on the SJV Rule 4653.5.2 and the SC Rule 1168(c)(5) provisions.

**Comment [A257]:** Similar to the SJV Rule 4653.5.2.8 provisions.

**Comment [A258]:** Stems from the SJV Rule 4653.5.2.9 provision.

**Comment [A259]:** Modeled on the SC Rule 1168(c)(5)(H) provision.

The stripper has a reactive organic compound composite partial pressure of equal to or less than
 9.5 millimeters of mercury at 20 degrees Celsius.

## S. Reporting Requirements

Submittal of an annual report to the District is required if a person holds a permit for applying adhesive products or sealant products subject to this rule. The annual report shall be due March 1 and it shall contain the following information for the previous calendar year:

- monthly records required by Section O.4,
- 2. annual totals (gallons) based on each of the coating's and solvent's monthly data, and
- name and address of the owner or operator, and the Permit to Operate number that the adhesive products and/or sealant products application operations are subject to.

## T. Requirements - Solvent Cleaning Machine

Any person who owns, operates, or uses any solvent cleaning machine shall comply with the applicable provisions of Rule 321, Solvent Cleaning Machines and Solvent Cleaning.

Click here to return to the list of Appendices in the Background Paper.

**Comment [A260]:** The annual report provision was relocated from PAR 353.O.4 to a stand-alone section per an Industry suggestion.

Comment [A261]: Added to clarify that Rule 321 provisions apply to solvent cleaning machines when used in conjunction with applying adhesives and sealants.

## Appendix H Santa Barbara County

Identification of Existing Federal Regulations and Air Pollution Control District Regulations that Apply to the Same Equipment or Source Type Covered in Rules 330, 337, 349, and 351

This appendix is provided to comply with the California Health & Safety Code Section 40727.2 requirements.

## **Federal Air Pollution Control Requirements**

The federal requirements in the below-referenced statutes apply to the same equipment or source types covered by Rules 330, 337, 349, and 351:

- 40 CFR, Part 60, Section 60.310 *et seq.*, Subpart EE, Standards of Performance for Surface Coating of Metal Furniture. (Rule 330)
- 40 CFR, Part 60, Section 60.440 *et seq.*, Subpart SS, Standards of Performance for Industrial Surface Coating: Large Appliances. (Rule 330)
- 40 CFR, Part 60, Section 60.460 *et seq.*, Subpart TT, Standards of Performance for Metal Coil Surface Coating. (Rule 330)
- 40 CFR, Part 60, Section 60.490 *et seq.*, Subpart WW, Standards of Performance for the Beverage Can Surface Coating Industry. (Rule 330)
- 40 CFR, Part 63, Section 63.3480 *et seq.*, Subpart KKKK, National Emission Standards for Hazardous Air Pollutants: Surface Coating of Metal Cans. (Rule 330)
- 40 CFR, Part 63, Subpart MMMM, Section 63.3880 *et seq.*, National Emission Standards for Hazardous Air Pollutants for Surface Coating of Miscellaneous Metal Parts and Products. (Rule 330)
- 40 CFR, Part 63, Subpart NNNN, Section 63.4080 *et seq.*, National Emission Standards for Hazardous Air Pollutants: Surface Coating of Large Appliances. (Rule 330)
- 40 CFR, Part 63, Subpart RRRR, Section 63.4880 *et seq.*, National Emission Standards for Hazardous Air Pollutants: Surface Coating of Metal Furniture. (Rule 330)
- 40 CFR, Part 63, Subpart SSSS, Section 63.5080 *et seq.*, National Emission Standards for Hazardous Air Pollutants: Surface Coating of Metal Coil. (Rule 330)
- 40 CFR, Part 63, Subpart GG, Section 63.741 *et seq.*, National Emission Standards for Aerospace Manufacturing and Rework Facilities. (Rule 337)
- 40 CFR, Part 63, Subpart HHHHHH, Section 63.11169 *et seq.*, National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources. (Rules 330 and 337)
- 40 CFR, Part 63, Subpart XXXXXX, Section 63.11514 *et seq.*, National Emission Standards for Hazardous Air Pollutants Area Source Standards for Nine Metal Fabrication and Finishing Source Categories. (Rules 330 and 337)
- 40 CFR, Part 63, Subpart VVVV, Section 63.5680 *et seq.*, National Emission Standards for Hazardous Air Pollutants for Boat Manufacturing. (Rules 349 and 353)
- 40 CFR, Part 63, Section 63.5780 *et seq.*, Subpart WWWW, National Emission Standards for Hazardous Air Pollutants: Reinforced Plastic Component Production. (Rule 349)

# Santa Barbara County Air Pollution Control District Requirements

These are shown in the following table.

Table 1. RULES THAT APPLY TO THE SAME EQUIPMENT TYPES THAT ARE SUBJECT TO RULES 330, 337, 349, AND 353

GENERIC REQUIREMENTS	AFFECTED EMISSION UNITS	BASIS FOR APPLICABILITY
RULE 201: Permits Required	All emission units	Emission of pollutants
RULE 202: Exemptions to Rule 201	Applicable emission units	Insignificant activities/emissions, per size/rating/function
RULE 210: Fees	All emission units	Administrative
<b>RULE 212</b> : Emission Statements	All emission units	Administrative
<b>RULE 302</b> : Visible Emissions	All emission units	Particulate matter emissions
RULE 303: Nuisance	All emission units	Emissions that can injure,
		damage, or offend.
<b>RULE 317</b> : Organic Solvents	All emission units	Emission of pollutants
<b>RULE 322</b> : Metal Surface Coating	All emission units	Composition of organics in all
Thinner and Reducer		metal surface coating thinners
		and reducers shall not be
		photochemically reactive
RULE 324: Disposal and	All emission units	Solvent disposal requirements
Evaporation of Solvents		
<b>REGULATION VIII</b> : New Source	All emission units	Addition of new equipment or
Review		modification to existing
		equipment. Applications to
		generate ERC Certificates.
REGULATION XIII (RULES 1301-	All emission units	A stationary source is a major
<b>1305</b> ): Part 70 Operating Permits		source.

A review of Table 1 indicates that there are no overlapping or conflicting averaging provisions, units, or any other pertinent provisions associated with emission limits.

Click <u>here</u> to return to the list of Appendices in the Background Paper.

# Appendix I Santa Barbara County Clarification of Rule Issues

The District worked closely with the regulated community to develop specific approaches to their individual needs and to clarify rule text. As a result of these efforts, staff received extensive feedback and input during the development stages. Also, members of the regulated community raised questions about the intent of certain rule provisions through discussions with staff and at the rule development public workshops.

The following text provides clarification of rule issues and consolidates comments/responses.<sup>a</sup> To help readers locate a specific issue, a table of contents is provided below.

Table 1. CLARIFICATION OF RULE ISSUES TABLE OF CONTENTS

Item	Rule Section	Торіс	Page

31	-	Sources for solvent ROC and toxic air contaminant data	I- <u>13</u>

## 1. Scope of new solvent requirements (330.A, 337.A, 349.A, and 353.A).

<u>Question/Issue</u>: Will the proposed amended rules limit the solvent ROC-content for solvents used in stripping, thinning, or solvent welding?

<u>Answer/Response</u>: The rule modifications include adding new solvent cleaning provisions. No changes to the ROC contents of thinning solvents or solvents used in solvent welding are proposed. A slightly lower ROC content for strippers subject to Rules 337 or 353 is being proposed in response to an ARB comment. Additional information for each of these categories is provided below:

<u>Thinning</u>: The rules limit the coating and polyester resin material usage on an **as applied** basis. Sources will be able to continue to thin materials with solvents providing they comply with the **as applied** limits in the applicable rule.

<u>Stripping</u>: The Rule 337 stripper ROC-content limit is being reduced from 400 to 300 grams per liter. Also, we added stripping provisions to Rule 353 to address debonding/unglueing issues on cured adhesives.

Solvent Welding: Welding adhesive limits in Rule 353 apply to 3 types of plastic: ABS, CPVC, and PVC.

# 2. Consistency of definitions (330.C, 337.C, 349.C, and 353.C).

<u>Question/Issue</u>: Industry requests that there be consistency in the definitions between the different rules. For example, some rules have a definition of **touch-up** and others don't.

<u>Answer/Response</u>: The District strives for consistency of definitions across the rules. In some cases, the inconsistencies are intentional (e.g., the Rule 321 and Rule 337 definitions relative to aerospace vehicles and aerospace vehicle components). Staff generally proposes definitions found in ARB or EPA guidance documents or state or federal law.

Regarding the **touch-up**, **touch-up** coatings, and **touch-up** and **repair** definitions, these vary from rule to rule due to the different operations. The Rule 330.B.2 exemption uses the term **touch-up** coatings; Rule 330.C's definition of this term is consistent with the one found in the metal parts coating Control Techniques Guidelines (CTG). Rule 337.B.2 exemption uses the term **touch-up** and **repair**, which is based on the aerospace CTG's **touch-up** and **repair** operation definition. Rule 337.B.11 exemptions use the term **touch-up**, which stems from the 40 CFR Section 63.747(c)(3)(i) and (ii) exemptions.

3. Conformal coating ROC-content limits (330.D and 337.D).

Question/Issue: Is the application of conformal coatings covered by Rule 330, 337, or neither of those rules?

<u>Answer/Response</u>: Neither of those rules. Rule 330 applies to metal parts and products. The application of conformal coatings to electronic components is exempt by Rule 330.B.4. Under proposed amended Rule 337 definition of **aerospace vehicle or component**, electronic components are excluded. A person using solvent in association with applying a conformal coating is subject to Rule 321 provisions.

4. Waste disposal methods (330.F.3, 337.F3, 349.D.3.c, and 353.J.3)

Question/Issue: Are owners and operators allowed to comingle their wastes?

<u>Answer/Response</u>: Yes, provided the wastes are disposed of by methods specified in the rule:

- 1. A commercial waste solvent reclamation service licensed by the State of California.
- 2. At a facility that is federally or state licensed to treat, store or dispose of such waste.
- 3. Recycling in conformance with Section 25143.2 of the California Health and Safety Code.
- 5. Waste drum labeling or marking requirement (330.F.7, 337.F.7, 349.D.3.g, and 353.J.7)

<u>Question/Issue</u>: How much detailed information needs to be on secondary containers; for example, do we need to specify the materials ROC content?

<u>Answer/Response</u>: No, the owner or operator needs to only specify generically what material is in the container. For example, the drum's markings could show, "mixed waste paints, solvents, and strippers." There is no need to specify the material's density or ROC content.

6. <u>Using manufacturer's recommended mixing data to comply with the recordkeeping provision (330.H.1.d, 337.H.1.d, 349.F.1.d, and 353.O.1.d)</u>

Question/Issue: My source mixes paints, adhesives, and epoxies following the manufacturers' recommended amounts for each component and the manufacturers provide the "as applied" ROC content data for the mixed products. Will maintaining the manufacturer's mixing data meet the rule requirements on recording specific mixing data for each batch?

Answer/Response: Yes, provided the manufacturer's recommended mixing procedures are followed.

7. Record retention period and meaning of "readily available" (330.H.8, 337.H.6, 349.F.7, and 353.O.6)

Question/Issue: Are owners and operators required to keep records longer than 2 years?

Answer/Response: It depends; records need to be maintained for 5 years if a source is subject to:

- 1. Rule 370, Potential to Emit Limitations for Part 70 Sources, or
- 2. Rule 1301, Part 70 Operating Permits General Information, or
- 3. A MACT standard.

<u>Question/Issue</u>: Please explain what "readily available" means. We have a large stationary source with numerous facilities and records are not kept at each facility's site.

<u>Answer/Response</u>: We consider "readily available" to mean the records can be provided within twenty-four hours after receiving a District request to inspect and review them.

8. Methods for determining a coating or a solvent's ROC content

Question/Issue: Will the District require that a source have a U.S.EPA Method 24 test done to determine the ROC content of a coating or a solvent or will the VOC data from a material safety data sheet (MSDS) be sufficient?

Answer/Response: Ideally, coating and solvent manufacturers base their product's VOC grams per liter data on a U.S.EPA Method 24 test. For solvents comprised of one chemical, the product's ROC content equals its density (assuming it is not an "exempt compound"). MSDS reported VOC concentration data may be acceptable. However, in certain cases the District may require a source to have an independent laboratory perform a U.S.EPA Method 24 test to determine a product's VOC content.

9. <u>Do toluene, acetone, methanol, isopropanol, and methyl ethyl ketone comply with the new rule provisions</u> (330.J, 337.D.2, 337.J, 349.H, 353.G, 353.H, and 353.R)?

Question/Issue: Our company wipe cleans electronic parts and products using TAMI solvents before applying surface coatings. TAMI solvents include toluene, acetone, methanol, and isopropanol (isopropyl alcohol, IPA) solvents. Will we be able to continue using the TAMI solvents under the proposed amended rules? What about the use of methyl ethyl ketone (MEK) solvent?

<u>Answer/Response</u>: It depends on the type of product being cleaned, the purpose of the cleaning, and the applicable rule. If the product cleaning is not associated with a Rule 330, 337, or 353-type surface coating or a Rule 349 polyester resin operation, then Rule 321 applies. In general, the answer is:

- 1. no, TAMI and MEK solvents cannot be used if the operation is subject to a new solvent provision prohibiting the use of high ROC-content solvents, and
- 2. yes, if the operation is exempt from the rule's solvent cleaning provision, the operation is not within the rule's applicability, or the rule requirements are such that the solvent complies (e.g., Rule 337 limits of 200 g/l or 45 mm of Hg).

The only cleaning compound used in the TAMI-MEK group that complies with the proposed amended rules' **ROC-content** limits is acetone. Acetone is technically not a "solvent," as the term is used in Rule 321 and the proposed amended rules; it contains no ROCs and no toxic air contaminants. Toluene and isopropanol meet the **ROC composite partial pressure** limit of PAR 337.

200

200

32.8

78

<u>Rule 330</u> Surface preparation and cleaning of application equipment: 25 g/l. Surface coating operations and associated solvents used on electronic components may be exempt by Rule 330.B.4 or B.11.

Rule 337 Surface preparation: 200 g/l or 45 mm of Hg at 20 degrees C; stripper: 300 g/l or 9.5 mm of Hg at 20 degrees Celsius; application equipment cleaning: 25 g/l or use of an enclosed cleaning system. Per the Rule 337 **aerospace vehicle or component** definition, Rule 337 does not apply to electronic components. Exemptions in PAR 337.B.9 may apply to ancillary electronic equipment.

Rule 349 Product cleaning, surface preparation, repair & maintenance cleaning, and application equipment cleaning: 25 g/l. Solvent cleaning of electronics are likely exempt by Sections B.4.a, b, c, or f or Section B.5.

<u>Rule 353</u> Surface preparation and cleanup solvent: 25 g/l; stripper: 300 g/l or 9.5 mm of Hg at 20 degrees Celsius. The cleaning of electronic parts may be exempt by Rule 353.B.13.

# 10. Acceptable methods for cleaning spray guns (330.J, 337.J.1.b, 349.H, and 353.G.2).

Question/Issue: What are the acceptable methods for cleaning spray guns under the proposed amended rules?

Answer/Response: These vary depending on the rule as shown in the following table.

Rule	Solvent ROC Content Limit	Alternative Compliance Methods (one of the following, as allowed)		
		Use of Add-On Control Equipment	Use of an Enclosed Cleaning System <sup>b</sup>	
330	25	Allowed	Not an alternative compliance option <sup>c</sup>	
337	25	Allowed	Allowed	
349	25	Allowed	Not an alternative compliance option <sup>a</sup>	
353	25	Allowed	Allowed	

<sup>&</sup>lt;sup>a</sup> "Acetone" is technically not a solvent.

b Item 25 discusses the definition of an "enclosed cleaning system."

<sup>&</sup>lt;sup>c</sup> See item 23 for more information.

Question/Issue: What if my source uses acetone to clean spray guns?

<u>Answer/Response</u>: Acetone is technically not considered to be a solvent as the compound contains no reactive organic compounds or toxic air contaminants. Hence, no District rule requirements apply to cleaning of application equipment with acetone. It should be noted that acetone is flammable and other agency requirements likely apply.

11. <u>Use of wash stations to clean application equipment and/or use of solvent cleaning machines to clean parts prior to painting (330.M, 337.M, 349.J, and 353.T).</u>

<u>Question/Issue</u>: We use solvent wash stations that have capacities greater than 1 gallon to clean application equipment. Will this activity be allowed under the proposed amended rules?

<u>Answer/Response</u>: Yes, provided the equipment and its operation comply with the provisions of Rule 321. "Wash stations" are considered to be "cold cleaning machines." All solvent cleaning machines should comply with Rule 321 regardless of an overall process being subject to an operation-specific rule (e.g., Rules 330, 337, 349, or 353). To clarify this issue, the District is proposing:

- 1. a minor Rule 321.B.6 revision,
- 2. changes to PARs 330, 337, 349, and 353 to:
  - a) expand the definition of "associated solvent" to include "solvent cleaning machines,"
  - b) add a definition of "solvent cleaning machine," and
  - c) include new sections at the end of each rule that indicate:

Requirements - Solvent Cleaning Machine

Any person who owns, operates, or uses any solvent cleaning machine shall comply with the applicable provisions of Rule 321, Solvent Cleaning Machines and Solvent Cleaning.

<u>Question/Issue</u>: We paint metal parts that are subject to Rule 330. Immediately before painting them, we surface prep them using a solvent cleaning machine (degreaser). Is this allowed under the proposed amended rule?

<u>Answer/Response</u>: Yes, provided the equipment and its operation comply with the provisions of Rule 321. For further details, see the previous answer/response.

12. Add aerospace vehicle and component adhesive and sealant provisions to Rule 337 (337).

Question/Issue: Aerospace vehicle and component adhesive requirements should be in Rule 337.

<u>Answer/Response</u>: We agree and have added these provisions to Rule 337. This is consistent with the EPA Control Techniques Guidelines for Coating Operations at Aerospace Manufacturing and Rework Operations.

13. Aerospace ground support equipment provisions (337.A).

<u>Question/Issue</u>: Satellite ground support equipment is sometimes refurbished (e.g., removal and replacement of insulation). The Rule 337 exemption provisions should extend to the ground support equipment due to the need to maintain certain levels of cleanliness during the transportation and handling of satellites.

Answer/Response: We concur and have included the following exemptions and definition.

## PAR 337.B.7 Exemption:

Section D.2 and J.1.a shall not apply to solvents and strippers used in space vehicle manufacturing and rework.

## PAR 337.B.9.g Exemption:

Section J.1.a shall not apply to wipe cleaning of aircraft and ground support equipment fluid systems that are exposed to the fluid, including air-to-air heat exchangers and hydraulic fluid systems.

## PAR 337.C Definition:

"Space Vehicle" means any man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes integral equipment such as models, mock-ups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. Also included is auxiliary equipment associated with test, transport, and storage, which through contamination can compromise the space vehicle performance.

The District modeled the Rule 337 space vehicle definition on the 40 CFR Part 63, Subpart GG term.

For surface coating operations on ground support equipment not associated with space vehicles, the provisions of Rule 339, Motor Vehicle and Mobile Equipment Coating Operations, may apply.

## 14. Satellite coating application equipment cleaning exemption (337.B.7).

<u>Question/Issue</u>: There are overlapping provisions between Rule 321 and Rule 337 regarding satellite coating operations. Specifically, Rule 321.B.10 exempts the cleaning of application equipment associated with applying satellite coatings. Since satellite coating operations are covered in Rule 337, this exemption seems out of place.

<u>Answer/Response</u>: The District concurs and plans to delete the Rule 321.B.10 text relative to applying coatings on satellites in a future rulemaking effort. It should be noted that proposed amended Rule 337.B.7 provides exemptions for satellite <u>stripping</u> and <u>surface preparation</u> (337.D.2 and J.1.a). However, per PAR 337.J.1.b, satellite coating <u>application equipment cleaning</u> will require either 1) a solvent with an ROC content 25 g/l or less, or 2) an enclosed cleaning system.

## 15. Rule 321 and 337 definitions of **aerospace vehicle or component** are different (337.C).

<u>Question/Issue</u>: The Rule 337 definition of aerospace vehicle or component excludes electronic components. But the Rule 321 definitions of aerospace vehicle and aerospace vehicle component do not exclude electronic components. Are these differences between the Rule 321 and Rule 337 definitions intentional?

<u>Answer/Response</u>: Yes, our approach is to make the provisions of Rule 321 applicable to electronic components used in aerospace vehicles and aerospace vehicle components. Electronic component coating operations are not subject to Rule 337, which is consistent with the provisions in 40 CFR Part 63, Subpart GG.

# 16. Adhesive primer vs. adhesive bonding primer definitions (337.C).

<u>Question/Issue</u>: In Rule 337, what's the difference between adhesive primer (as defined in the compatible substrate primer definition) and adhesive bonding primer?

<u>Answer/Response</u>: These terms stem from 40 CFR 63, Subpart GG and we defer to EPA for an explanation on their differences.

"Adhesive Bonding Primer" means a primer applied in a thin film to aerospace components for the purpose of corrosion inhibition and increased adhesive bond strength by attachment. There are two categories of adhesive bonding primers: primers with a design cure at 250°F or below and primers with a design cure above 250°F.

"Compatible Substrate Primer" includes two categories: "compatible epoxy primer" and "adhesive primer." [...] "Adhesive primer" is a coating that (1) inhibits corrosion and serves as a primer applied to bare metal surfaces or prior to adhesive application, or (2) is applied to surfaces that can be expected to contain fuel. Fuel tank coatings are excluded from this category.

## 17. Meaning of the word "new" for the "new commercial aircraft" limit in Table 337-2 (337.D.1).

<u>Question/Issue</u>: Rule 337 has a category for new commercial aircraft under adhesive bonding primer. What constitutes a new aircraft part or product?

<u>Answer/Response</u>: If an aircraft part or product is currently undergoing construction/assembly or has been recently made (e.g., within the last three months) or has not yet been used, it will be considered to be new.

# 18. Rule 337 adhesive limits for aerospace vehicles and components (337.D.1).

Question/Issue: What are the proposed adhesive limits in Rule 337?

<u>Answer/Response</u>: They are found in proposed amended Rule 337, Section D.1, Table 337-2 for specialty coatings (Background Paper's Appendix E). The District included adhesive categories from the 1997 Control Techniques Guideline, "Surface Coating Operations at Aerospace Manufacturing Rework Operations." Staff also included a few adhesive categories from the SJV, SC, and VC rules.

#### 19. Rule 337 coating categories and limits (337.D.1).

<u>Question/Issue</u>: For proposed amended Rule 337, why were coating types added, what existing limits were changed, and what was the basis for the change?

Answer/Response: The need to add coating types stems from the state requirement to include every feasible control measures. The District is using the EPA guidance on meeting the presumptive reasonably available control technology requirements to meet California's every feasible measures requirement. The District used the 1997 Control Techniques Guideline, "Surface Coating Operations at Aerospace Manufacturing Rework Operations," to determine the coating types that should be added. Staff also used some of the general categories from the National Emission Standards for Hazardous Air pollutants (NESHAP) for the source type: 40CFR63, Subpart GG.

The annotated proposed amended Rule 337 (Background Paper's Appendix E) shows the existing limits that were changed in strikeout and underline format. This annotated rule also includes notes on the basis for coating limits.

In general, staff compared the limits in the CTG and NESHAP to those in existing Rule 337 and other air districts. Lower ROC-content limits that have been achieved in practice were included in lieu of the limits recommended in the CTG or NESHAP.

#### 20. Stealth aircraft coating limits (337.D.1).

Question/Issue: What is the ROC-content limit for aircraft coatings that prevent the transmission of light?

<u>Answer/Response</u>: PAR 337's definition of electric- or radiation-effect coating includes coatings that interact through absorption or reflection of light. The Table 337-2 limit for this category is 800 g/l. If the U.S. Dept. of Defense has designated an electric- or radiation-effect coating as classified, such coating is exempt from the Table 337-2 limit per Rule 337.B.12.

### 21. Debonding and reworking parts that have been glued (337.D.2, 337.J.1.a, 353.G.1, and 353.R).

<u>Question/Issue</u>: Reworking parts that are being glued together requires special consideration. The process may involve cured or uncured adhesives. It overlaps the Rule 353 surface preparation and cleanup provisions.

<u>Answer/Response</u>: The District agrees and has taken the following steps to clarify the requirements when reworking parts that have uncured or cured adhesives:

1. A definition of **stripper** is added to Rules 337 and 353, which indicates:

"Stripper" means any liquid that is applied to a surface to remove cured or dried coatings primers, adhesives (e.g., debonding or unglueing), topcoats, and temporary protective coatings.

- 2. Adhesive provisions were added to Rule 337.
- 3. Section R was added to Rule 353, which is similar to the Rule 337.D.2 stripper use provisions.

Under the proposed amended rules, removal of **uncured** adhesives will be subject to either 337.J.1.a (200 g/l or less ROC content or a solvent with an ROC composite partial pressure of 45 mm of Hg at 20 degrees C or less) or Rule 353.G.1 (to become 25 g/l or ROC or less) depending on the source type.

Click <u>here</u> to return to the Table of Contents.

For removal of **cured or dried** adhesives (use of a stripper), Rule 337.D.2 or Rule 353.R will apply, depending on the source type. Both of these provisions are the same: 300 g/l or less ROC content or a solvent with an ROC composite partial pressure of 9.5 mm of Hg at 20 degrees C or less.

22. <u>Using high ROC-content solvents when cleaning aerospace coatings from application equipment (337.J.1.b).</u>

<u>Question/Issue</u>: Cleaning application equipment that applies epoxy polyamide topcoats to satellites requires a high ROC-content solvent (900 g/l). Will this be allowed under the proposed amended rules?

Answer/Response: Yes, provided an enclosed cleaning system is employed.

23. Option to use an enclosed cleaning system for cleaning application equipment in lieu of using low-ROC solvents (337.J.1.b and 353.G.2).

<u>Question/Issue</u>: Proposed amended Rules 337 and 353 allow the option of using an enclosed cleaning system when cleaning application equipment. However, Rules 330 and 349 do not include this option. Was this intentional?

<u>Answer/Response</u>: Yes, we followed the same approach used in other air districts. Sources subject to Rule 330 and 349 using enclosed cleaning systems need to ensure the solvent ROC content does not exceed 25 grams per liter.

24. Solvent cleaning of application equipment with an enclosed cleaning system (337.J.1.b and 353.G.2).

<u>Question/Issue</u>: Is an **enclosed cleaning system** for cleaning application equipment a **solvent cleaning machine**?

<u>Answer/Response</u>: No, unless a source is using an airless solvent cleaning machine or an air-tight solvent cleaning machine exclusively for cleaning application equipment. Airless and air-tight solvent cleaning machines are designed to remove the air inside the chamber before solvent is introduced into the cleaning chamber. Due to cost considerations, it is unlikely that a source would use an airless or air-tight solvent cleaning machine for cleaning application equipment.

25. <u>Definition for **enclosed cleaning system** (337.J.1.b and 353.G.2).</u>

Ouestion/Issue: What constitutes an enclosed cleaning system for cleaning application equipment?

<u>Answer/Response</u>: The District added the following definition to Rule 102:

**"Enclosed Cleaning System"** means any application equipment cleaner (e.g., an enclosed gun washer) that totally encloses spray guns, cups, nozzles, bowls, and other parts during solvent washing, rinsing, and draining procedures. An enclosed cleaning system for cleaning application equipment is not a solvent cleaning machine.

Click <u>here</u> to return to the Table of Contents.

# 26. Rule 353 applicability when a source applies aerospace vehicle and component adhesives (353.A).

<u>Question/Issue</u>: Is the use of adhesives on aerospace vehicles and components exempt from Rule 353 per Section B.1.f.1?

<u>Answer/Response</u>: Yes, and the proposed amended rule changes are intended to make the Rule 353.B.1.f.1 exemption less ambiguous. The legislative intent of existing Rule 353.B.1.f.a text was to exempt aerospace adhesives from Rule 353. Per the August 19, 1999 Rule 353 Board Package response to Public Comment number 1-2:

The District amended Section B.1.f to list the adhesives and sealants that are exempt from Rule 353 because they are subject to Rule 337, Surface Coating of Aircraft or Aerospace Vehicle Parts and Products, or Rule 354, Graphic Arts.

C&D Aerospace, an aircraft refurbishing facility, uses adhesives and sealants. Section B.1.f of Rule 353 exempts C&D Aerospace's adhesive and sealant operations from Rule 353. These adhesive and sealant operations are subject to Rule 337.

The District initially believed some portions of operations at C&D Aerospace and The Jet Center @ Santa Barbara would be subject to Rule 353. However, after further analyses, we decided that aircraft and aerospace glues are highly specialized and should be regulated through Rule 337.

Also, the response to Public Comment number 1-10 from this same document indicates in part:

C&D Aerospace adhesive and sealant applications are subject to Rule 337 and they are exempt from Rule 353 by Section B.1.f.

#### 27. Exemption for avionic equipment (353.B.13.i).

Question/Issue: Why is avionic equipment included in the Rule 353.B.13.i exemption from Section G.1, H, and R?

<u>Answer/Response</u>: Without this exemption, avionic equipment would be subject to those Rule 353 solvent/stripping provisions.

Per the definition of **aerospace vehicle or component**, Rule 337 does not apply to electronic components. Rule 353.B.5.a exempts adhesives/sealants and associated solvents that are subject to Rule 337. Since Rule 337 does not apply to aerospace vehicle electronic components, the Rule 353.B.5.i exemption does not apply to such electronic components.

The District recognizes the need for maintaining a higher degree of cleanliness for avionic equipment (and other items identified in 353.B.13.i). Therefore, we have added a limited exemption for surface preparation, cleanup, and stripping operations associated with avionic equipment in Rule 353.

Click here to return to the Table of Contents.

28. What surfaces are included in the requirements for cleanup solvent and/or cleanup method (353.G.1)?

Question/Issue: Please clarify the meaning of the term surfaces in the current Rule 353.G.1 provision:

Except as provided in Section I of this rule, no person shall use materials containing reactive organic compound for the removal of adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers, or any other primer from surfaces, other than spray application equipment, unless the reactive organic compound composite partial pressure of the solvent used is less than 45 millimeters (mm) of mercury (Hg) at 20 degrees (°) Celsius (C).

Does this provision apply to only solvent used to clean work surfaces?

Answer/Response: No, the provision applies to cleanup of any surface (e.g., product surfaces, jigs, clamps, benches, and any other work surfaces after adhesive has been applied), but not to solvents used to clean spray application equipment. Cleaning of product surfaces before the application of adhesives is subject to 353.H. If a source subject to Rule 353 is cleaning uncured adhesives from parts in a rework activity, then the Rule 353.G.1 provisions apply. If the adhesive has cured (dry to the touch), then the removal of the adhesive is part of a stripping operation and the new 353.R provisions apply.

29. Requiring use of low ROC content solvent or an enclosed gun washer when cleaning application equipment (353.G.2).

<u>Question/Issue</u>: What are the costs associated with requiring a non-ROC solvent or an enclosed cleaning system in lieu of using a solvent wash station for cleaning application equipment?

<u>Answer/Response</u>: The cost of an enclosed cleaning system ranges between \$500 and \$2,800 for an automated system. If an existing wash station has MEK solvent and acetone is used instead, there will be a solvent costs savings. IPA and acetone solvent costs are about the same.

A wash station employed with acetone is not subject to Rule 321 because acetone is technically not classified as a solvent. Hence, a source could forgo enclosed gun washer costs or solvent cleaning machine modification costs if acetone is employed.

30. Architectural coating permit exemption vs. the tertiary-butyl acetate one gallon per year per stationary source permit exemption (202.D.14 & 202.D.10.1.2)

<u>Question/Issue</u>: Bridge painting is permit-exempt by Rule 202.D.14. However, if the bridge coating materials contain tertiary-butyl acetate (tBAc) and tBAc use is in excess of one gallon, does Rule 202.D.10.1.2 require that the painting operation be permitted?

Answer/Response: It depends; painting with materials where tBAc use exceeds 1 gallon per year per stationary source will trigger a permit if the bridge painted is part of a stationary source. Rule 202.D.10.l indicates, "... notwithstanding any exemption defined in this rule, no new or modified stationary source..." Thus, D.10.l.2 overrides the D.14 provision and a permit is required if the bridge is part of a stationary source. Otherwise, Rule 202.D.10.l is not applicable and the operation is exempt by Rule 202.D.14.

Click here to return to the Table of Contents.

## 31. Sources for solvent ROC and toxic air contaminant data

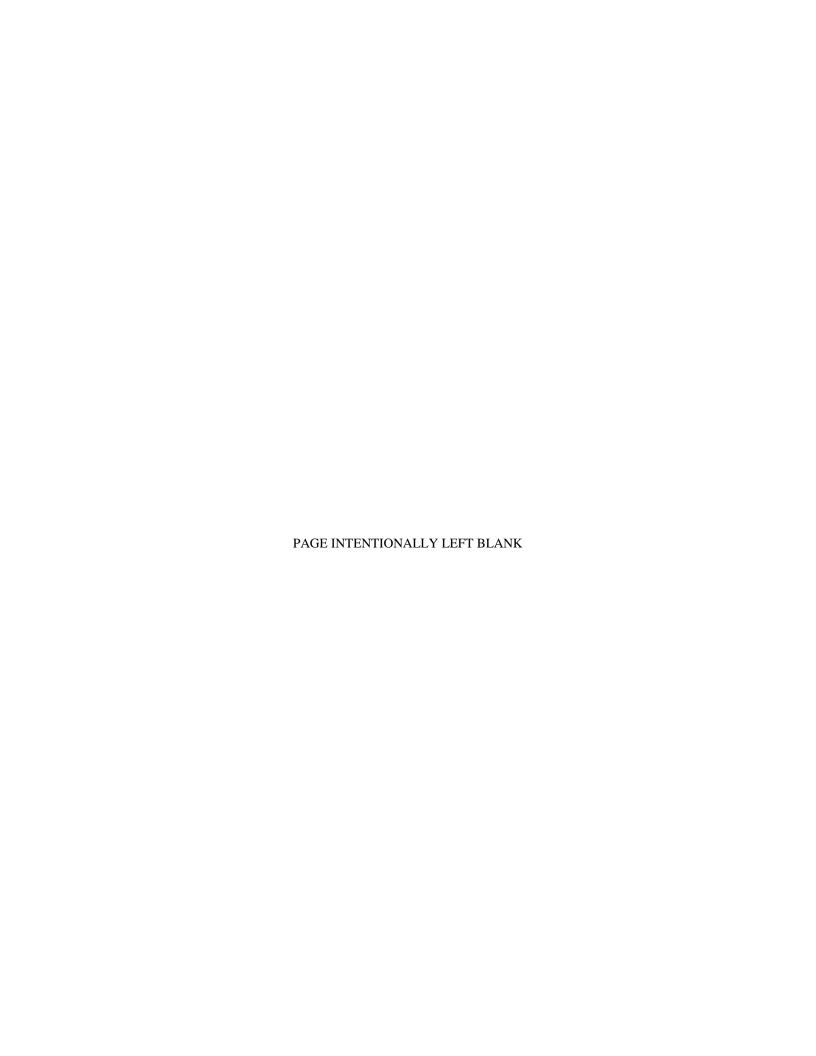

<u>Question/Issue</u>: Where can I find data on a particular solvent's ROC content and toxic air contaminant (TAC) classification?

<u>Answer/Response</u>: The District has summarized data on many solvents. To access this data, download the Rule 321 Staff Report from this link: <a href="www.sbcapcd.org/apcd/boardfiles/9-10-R321-BL.pdf">www.sbcapcd.org/apcd/boardfiles/9-10-R321-BL.pdf</a>. ROC and TAC data is shown in the Staff Report's Appendix N, Solvent Information Table, which begins on page 249 of the PDF file. All TAC compounds that had been classified as TACs as of September 2010 are shown in Appendix M, which begins on page 233 of the PDF.

Other sources of ROC/TAC data include material safety data sheets, product labels, and reference books.

			address of the company or agency, and PTO number.	
Prohibition of Specification	No person shall solicit or require for use or specify the application of a coating subject to this rule if such use or application results in a violation of any of the provisions of this rule. The prohibition of this Section shall apply to all written or oral contracts under the terms of which any coating is to be applied to any metal part or product at any physical location within the District.	A person shall not use, apply, or specify any coating for use on any metal part or product subject to the provisions of this Regulation which contains volatile organic compounds in excess of the Section D.1 limits, as applied.		No person shall specify, solicit or require the application of any coating to any metal part or product, or the use of any equipment cleaning solvent, if such application or use would violate this rule. This prohibition applies to all written and oral contracts for which any coating subject to this rule is to be applied to any metal part or product at any location in Ventura County.
Coating Compliance Statement or Labeling Requirements	Manufacturer of coatings and solvents must provide VOC concentration, mixing instructions, formulation information, and recommendations regarding thinning, redacting, or mixing with any other VOC containing materials, and express the coating VOC content on an as applied basis when used in accordance with the manufacturer's recommendations.		Manufacturer of coatings and solvents must provide VOC concentration, mixing instructions, formulation information, and recommendations regarding thinning, redacting, or mixing with any other VOC containing materials, and express the coating VOC content on an as applied basis when used in accordance with the manufacturer's recommendations.	Manufacturer of coatings and solvents must provide VOC concentration, mixing instructions, formulation information, and recommendations regarding thinning, redacting, or mixing with any other VOC containing materials, and express the coating VOC content on an as applied basis when used in accordance with the manufacturer's recommendations.

Regulated Component	San Joaquin Valley Unified APCD Rule 4603 (09/17/2009)	San Luis Obispo County APCD Rule 411 (01/28/1998)	Santa Barbara County APCD Rule 330 (Proposed)	Ventura County APCD Rule 74.12 (04/08/2008)
Applicability	The provisions of this rule shall apply to the surface coating of metal parts or products, large appliances parts or products, metal furniture, and plastic parts and products, automotive/transportation and business machine plastic parts and products, and pleasure crafts, and to the organic solvent cleaning, and the storage and disposal of all solvents and waste solvent materials associated with such coating.	This Rule is applicable to any person who applies or specifies the use of surface coatings to metal parts and products	This rule is applicable to any person who manufactures any metal part coating or product coating for use within the District, as well as any person who uses, applies, or solicits the use or application of any metal part or product coating or associated solvent within the District.	The provisions of this rule apply to any person who applies or specified the use of surface coatings to metal parts or products.
Comments	The SJV Rule 4603 has exemptions and limits for the following that have been omitted from this analysis for brevity:  -Dip coated steel joists, -Large appliance parts and products, -Metal furniture, -Plastic parts, and -Pleasure craft.		The SBC Rule 330 only has a few coating categories.  The <b>specialty coating</b> categories, which are specified in other air districts (e.g., pretreatment wash primer, high temperature, high gloss, etc.), are subject to the SBC Rule 330 <b>general coating</b> limits.

Spray Application Equipment Transfer Requirements	Electrostatic, electrodeposition, flow coat, roll coat, dip coat, brush coat, or HVLP. In lieu of meeting this requirement add-on control equipment may be used.	Electrostatic, electrodeposition, flow coat, roll coat, dip coat, HVLP, hand application, detailing or touch-up guns, or other approved method that can demonstrate at least 65% transfer efficiency. Specific provisions allow use of air-atomized spray for certain adhesives.	Electrostatic, flow coat, dip coat, HVLP, hand application, or other approved method that can demonstrate at least 65% transfer efficiency.	
Control Equipment Capture and Control Efficiency	Overall capture and control efficiency of 85.5% or greater.	Overall capture and control efficiency of 85.5% or greater. Compliance through the use of addon exhaust control equipment shall not result in affected pollutant emissions in excess of the affected pollutant emissions that would result from compliance with other applicable portions of the rule.	Overall capture and control efficiency of 85% or greater.	
Solvent Use, Surface Preparation, and Clean Up	The solvent is to contain less than 200 grams of ROC per liter of material, as applied, or have an ROC composite partial pressure less than or equal to 45 mm Hg at a temperature of 20° C. In lieu of meeting this requirement add-on control equipment may be used.	The following becomes effective one-year after adoption of the amended rule.: When performing surface preparation for coating application and cleanup (other than spray application equipment cleaning) the solvent is to contain less than 200 grams of ROC per liter of material, as applied, or have an ROC composite partial pressure less than or equal to 45 mm Hg at a temperature of 20 °C.	No person shall use a solvent for surface cleaning, clean-up or engine gas path cleaning excluding stripping coatings or cleaning coating application equipment unless 1) contains less than 200 grams of ROC per liter of material, as applied, or 2) ROC composite partial pressure of the solvent is less than or equal to 25 mm Hg at a temperature of 20 °C.	

Santa Barbara County APCD

	Surface Coating of Aerospace Vehicles and Components Performance Standards <sup>1</sup>		
Regulated Component	San Joaquin Valley Unified	Santa Barbara County APCD Rule	Ventura County APCD Rule
	APCD Rule 4605 (06/16/2011)	337 (Proposed)	74.13 (11/11/2003)
		Except for solvent cleaning of spray application equipment, any person performing solvent cleaning with a solvent containing more than 25 grams per liter of material shall use one or more of the following cleaning devices or methods: 1) Wipe cleaning where solvent is dispensed to wipe cleaning materials from containers that are kept closed to prevent evaporation, except while dispensing solvent or replenishing the solvent supply; 2) Application of solvent from hand-held spray bottles, squirt bottles, or other closed containers with a capacity of one liter or less; or 3) Non-atomized solvent flow, dip, or flush cleaning method where pooling on surfaces being cleaned is prevented or drained, and all solvent runoff is collected in a manner that enables solvent recovery or disposal. The collection system shall be kept closed to prevent evaporation except while collecting solvent runoff or

	is empty.	wastes, or 3) recycling. Containers used to store ROC-containing materials shall be marked or clearly labeled indicating the name of the material they contain.	
Solvent Use, Cleaning of Application Equipment	An operator shall not use VOC-containing materials to clean spray equipment used for the application of coatings, adhesives, or ink, unless an enclosed system or equipment that is proven to be equally effective at controlling emissions is used for cleaning. If an enclosed system is used, it must totally enclose spray guns, cups, nozzles, bowls, and other parts during washing, rinsing and draining procedures, and it must be used according to the manufacturer's recommendations and must be closed when not in use. In lieu of meeting this requirement add-on control equipment may be used.	Use a solvent with an ROC content of 25 grams per liter. In lieu of meeting the reactive organic compound-content limit, a person may use an enclosed cleaning system, or equipment that is proven to the satisfaction of the Control Officer to be equally effective as an enclosed cleaning system at controlling emissions. (Becomes effective one-year after adoption of the amended rule.)	Use of 1) an enclosed gun washer or "low emission spray gun cleaner" that has been approved in writing by the APCO, which is properly used for spray equipment cleaning, and 2) The ROC composite partial pressure of organic solvent used is less than 45 mm Hg at 20°C.
Stripper	No operator shall use or specify for use within the District a coating stripper unless it contains less than 300 grams of VOC per liter (2.5 lb/gal), as applied, or unless it has a VOC composite vapor pressure of 9.5 mm Hg (0.18 psia) or less at 68°F. In lieu of meeting this requirement add-on control equipment may be used.	No person shall apply any stripper unless it contains less than 300 grams of ROC per liter, as applied, and/or unless its ROC composite partial pressure is 9.5 mm Hg or less at 20 °C.	No person shall use a coating stripper unless it contains less than 300 grams of ROC per liter, as applied, or unless its ROC composite partial pressure is 9.5 mm Hg or less at 20 °C.

		-Keep monthly records of: 1) the	
		volume of the ROC-containing	
		materials used, 2) ROC content of	
		the materials, and 3) resulting ROC	
		emissions.	
		-If claiming the §B.1 exemption,	
		maintain: 1) daily volumes of non-	
		complying coatings used by separate	
		formulation, and 2) annual running	
		totals of non-complying coating	
		volumes used for each separate	
		formulation and all formulations.	
		-When using add-on emission	
		control equipment, maintain daily	
		records of key system operating and	
		maintenance data.	
		-Any records required to be	
		maintained pursuant to the rule shall	
		be kept on site for at least 2 years	
		unless a longer retention period is	
		otherwise required by state or	
		federal regulation(s). Such records	
		shall be readily available for	
		inspection and review by the	
		District.	
Submittal of an Annual Report		Submittal of an annual report is	
		required if a person: 1) holds a	
		permit for equipment subject to the	
		rule, or 2) a person is subject to the	
		rule and applies non-complying	
		coatings. The report is to include:	
		1) monthly records required by

Regulated Component	San Joaquin Valley Unified	Santa Barbara County APCD Rule	Ventura County APCD Rule
	APCD Rule 4605 (06/16/2011)	337 (Proposed)	74.13 (11/11/2003)
		§H.4, 2) annual totals, 3) if claiming the §B.1 exemption, the annual totals of non-complying coatings per §H.7.b, and 4) if permitted, the name and address of the company or agency, and PTO number.	
Applicability	This rule shall apply to the manufacturing, assembling, coating, masking, bonding, paint stripping, surface cleaning, service, and maintenance of aerospace components, the cleanup of equipment, and the storage and disposal of solvents and waste solvent materials associated with these operations.	-This rule is applicable to any person who manufactures any aerospace vehicle coating or component coating for use within the District, as well as any person who uses, applies, or solicits the use or application of any aerospace vehicle or component coating or associated solvent within the District. Rule 337 does not apply to electronic components.	This rule is applicable to the manufacturing, assembling, coating, masking, bonding, paint stripping, and surface cleaning of aerospace components and the cleanup of equipment associated with these operations. Where Rule 74.12, Surface Coating of Metal Parts and Products, applies to the coating or cleaning of metal parts, including but not limited to tooling operations, this rule shall not apply.
Exemptions	-Jet engine or rocket engine flushing operations using any solvent other than trichloroethylene are exempt from this rule.  - Except for the recordkeeping provisions of Sections 6.1.1 and 6.1.4, the requirements of Section 5.0 shall not apply to aerospace assembly and component coating operations using not more than four (4) gallons of products containing VOCs per day. Solvent-containing materials used in operations subject to Rule 4662 (Organic Solvent Degreasing Operations), shall not be included in this determination.	-Any non-complying coatings with separate formulation used in volumes of less than 20 gallons of each of each non-complying formulation per stationary source in any calendar year is exempt from the ROC limit. To qualify for this exemption, the total volume of non-complying coatings at the stationary source shall not exceed 200 gallons annually. Coatings used for operations that are exempt per Sections B.2, B.3, B.6, B.8, B.11, B.12, and B.13 shall not be included in calculating the volume of coatings used under this exemption.  -The application method and recordkeeping requirements do not	-Except for the prohibition of solicitation provisions, The rule does not apply to any stationary source that emits < 200 lbs in every rolling period of 12 consecutive months from assembly and component manufacturing operations.  Emissions from cold cleaners, vapor degreasers, and aerosol products, shall not be included in this determination.  -Coating limits do not apply to: any coating with separate formulations used in volumes of less than 20 gallons in any calendar year or any adhesive with separate formulations

<sup>&</sup>lt;sup>4</sup> The San Luis Obispo County APCD is omitted from this table as they have no rule for this equipment/operation category.
<sup>5</sup> The San Joaquin Valley Unified APCD Rule 4684 has special provisions for **fiberglass boat manufacturing**. Essentially those provisions require the use of a closed molding process and the monomer content limits shown in the table, coupled with solvent cleaning provisions, and solvent storage and disposal requirements. In lieu of meeting those provisions, there are various compliance options. For the purposes of brevity, additional details of the SJV Rule 4684 provisions on **fiberglass boat manufacturing** are omitted from this analysis.

<sup>&</sup>lt;sup>6</sup> The monomer content of the material shall not be more than the percentages specified, by weight, as applied. Santa Barbara County APCD

Santa Barbara County APCD

<sup>&</sup>lt;sup>7</sup> The San Luis Obispo County APCD is omitted from this table as they have no rule for this equipment/operation category.

<sup>&</sup>lt;sup>8</sup> Rule 4653 and Rule 74.20 group the materials in a manner that deviates from the model rule in the ARB Reasonably Available Control Technology and Best Available Control Technology guidance document for adhesives and sealants. Staff has attempted to show the SJV and VC limits for the categories that correspond to that model rule. The SJV Rule4653 has stricter requirements that go into effect on January 1, 2012. The values shown in parentheses reflect the limits that become effective in 2012.

# Appendix K Santa Barbara County Impacts from the Revised Rules

#### **Industry Impacts**

The impacts from the revised rules will depend on the type of parts, products, and equipment being cleaned and the cleaning processes employed. In general, the amended Rules 330, 349, and 353 will require the use of solvents with an ROC content of 25 grams per liter or less. For solvent cleaning operations requiring higher ROC contents to achieve greater degrees of cleanliness, an exemption has been added to Rules 330, 337, 349, and 353. Generally, these exemptions are consistent with the industry standards and exemptions found in other air district rules.

Proposed amended Rule 337's solvent cleaning requirements specify a source is to either meet a 200 g/l ROC content limit or comply with an ROC composite partial pressure of 45 mm Hg at 20 °C. Further, when employing a solvent with an ROC content greater than 25 g/l, certain cleaning devices or methods are to be used (e.g., wipe cleaning, spray bottles, non-atomized solvent flow). The District anticipates that these provisions are easily met and there should be no impacts from them.

The Rule 337 stripper requirement ROC-content limit is being lowered slightly. However, strippers currently in use (e.g., methylene chloride) meet the lower limit. Also, the lower polyester resin monomer content limits proposed in Rule 349 should not cause impacts as these materials are generally in use and available in California.

Rules 337 and 353 will allow the use of higher ROC solvents when cleaning spray application equipment, provided an enclosed cleaning system is used. Some sources may need to purchase enclosed cleaning systems or switch to a low or no ROC cleaning material to comply. Hence, there may be purchasing costs (\$500 to \$2,800 per system) associated with new enclosed cleaning systems. The enclosed gun washer purchase costs will be offset by reduced labor costs and reduced solvent costs (purchase and disposal). If a source is currently using IPA or MEK solvents, switching to acetone would result in neutral or a cost savings for purchased solvent, respectively. And, by switching to acetone, the source would not need to modify the spray application equipment cleaning methods. (Acetone is a non-ROC, non-TAC cleaning material and is not subject to the District rules.)

The project includes a slight revision to Rule 321, Solvent Cleaning Machines and Solvent Cleaning. The Rule 321.B.6 exemption change will clarify that solvent cleaning machines used in conjunction with one of the types of operations covered by the listed rules is not exempt from Rule 321. There are no impacts anticipated from the rule revision beyond those indicated in the September 20, 2010 Staff Report for Rule 321.

The following provides impact information from the various rule revisions.

## **RULE 102, DEFINITIONS**

With the addition of four exempt compounds to the definition of **reactive organic compounds**, operators will have additional options for using compounds that will not be subject to the District's new source review, prevention of significant deterioration, or prohibitory rule requirements.

#### RULE 202, EXEMPTIONS TO RULE 201

The replacement of the EPA test method with the South Coast AQMD method addresses concerns about the sensitivity of the EPA tests when analyzing low-ROC solvents. The District is unaware of any potential impacts due to changing the test method.

RULE 330, SURFACE COATING OF METAL PARTS AND PRODUCTS, RULE 337, SURFACE COATING OF AEROSPACE VEHICLES AND COMPONENTS, RULE 349, POLYESTER RESIN OPERATIONS, AND RULE 353, ADHESIVES AND SEALANTS

Sources complying with the amended rule provisions may need to:

- a. Replace the solvent used in **solvent cleaning** with a lower ROC- and/or lower TAC-content solvent;
- b. Follow new or improved solvent handling techniques per the **general operating requirements** sections of the rules (Sections 330.F, 337.F, 349.D.3, and 353.J);
- c. Modify their existing **solvent cleaning** techniques to be consistent with the new requirements (i.e., employ sanctioned devices and methods);
- d. Change to a coating and polyester resin material that meet the lower ROC-content limits in Rules 337, 349, and 353; and/or
- e. Implement enhanced recordkeeping procedures.

The District estimates that the increased costs for complying with the amended recordkeeping provisions will be about \$1,000 per facility per year on the average. Also, there will likely be a slight increase in the administrative costs associated with preparing annual reports due to the changes in recordkeeping. This increase only affects permitted facilities and the District estimates it will be on the order of \$200 to \$300 per facility.

## **District Impacts**

There should be minimal impacts to the District associated with the revised rules. Staff anticipates that the majority of the impacts from this rulemaking action will involve outreach and education efforts and enforcement activities. These costs will be integrated into the District general compliance verification program.
